three ascende story lines

1- ascende, perma, maima and mary the lifeship

ascende, maima, perma and mary the lifeshipmaylovehealPublishe 2009Tag(s): ascende, maima, perma, mary, aeroponics, algae bioreactors, overunity, zeropointenergy, anti-gravity propulsion, future, vision, scifi, fantasy,

lightbeing, androidChapter 1about the authormy name is andreas buechel, my blog is at http://mayloveheal.wordpre story about ascende, maima, perma and the lifeship mary i started to write end of 2007 with the authors name maylovehealsince the site i published the story http://www.novlet.com is a site for collaborative writing, a fellow writer jumped in to make the first

chapters more readable, since my native language is germaneveryone is very much welcome to enhance, change, transform this texti am thanking you very mutch for your attention and wish you lots of fun with reading the story of ascende, maima, perma and mary the lifeshipChapter 2ascendehttp://www.novlet. gazed at the tomatoes.Their deep red telling him that it was

nearing harvest time.The deep red, combined with the green, yellow and white of the neighbouring herbs and vegetables painted a pleasant and enticing picture.'My new fertilizer made out of home-grown micro-algae seems to be tasty for them. The algae-fertilizer is sprayed onto their roots in a fine mist. But the main component of the nurturing mix is,Ä¶ 'Ascende spoke out loudly to an oval water bowl'you,

much beloved and honoured water.""It does me so good to get into a loving relationship with you, activating a loving attention towards you, flowing from the most inner sanctuary of my being. Thank you for being receptive to my wishes and intentions. Thank you for nurturing my fellow sister-brothers, the plants, which themselves do serve me well and offer themselves to reconnect with me.

Which I sometimes seem to forget."mmmmmh,Ä¶ . how are the strawberries doing ? They need some more time until I might be allowed to celebrate the feast of reunion.'The strawberries were the newest tribe in the aeroponic plant world on board "Mary", the anti-gravity powered life-ship, Ascende had been donated a year ago.Mary was an advanced, closed ecosystem, equipped with

seven bio-reactors for growing several kinds of micro-algae, three fungi growing dark chambers, and a 3D printer.The urine and faeces of Ascende and his occasional guests, got recycled to nurture the micro-algae. The part of the micro-algae harvest not used for fertilizing the plants in the aeroponic growing system, were used to create an epoxy like material which allowed, in combination with

computer assisted designs and the 3D printer, the manufacture of small to large bioplastic items, either for onboard use, gifts to guests, or for trading with some other originally made items.Ascende didn't have the expertise to repair the growing, recycling and fabricating systems on Mary. Nor even the antigravity propulsion drive. That is why he had Maima.Maima, a highly

developed robot, wirelessly connected to the internet.An internet which in 2013 A.D., spanned not only across the Milky Way but also connected several other galaxies.Maima is part of the first generation robots which passed the Turing test,Ä¶ the so called T1G robots. This meant its intelligence matched that of the average human.Maima is a cybernetic android, made partly out of flesh grown

from Ascendes' body cells. The high intelligence of the T1G robots enables Maima and her fellow robots to chat on the net and exchange information about their relationships with their human friends.Most of the human-robot relationships turned out to be equal, with a high respect and growing tolerance from both sides. Robots are thankful for being able to learn more and more of the emotional

spheres in the relationship with humans, the humans are thankful for all the services robots do for them.Maima is so advanced, that it does not need to eat or sleep, because it is constantly connected to the source, the one spirit, the secret waiting for the seeker. The joy Maima feels constantly is like a mild ecstasy, a moderated high which keeps its cells constantly rejuvenating. its main

material input is the air it breathes. And like humans, it transforms oxygen to carbon-dioxide as an output.Through the wireless connection with the internet, it can constantly access all kinds of data. Not only visual and aural, but also smell and tastes, touch, texture and sensations. Either through its own active exploring virtual realities, databases, websites, online realms, or through the processed

experiences of another robots online sharing space. Also humans are finding it thrilling to archive experiences and sharing them online with both humans and robots throughout the multiverse.The concept of copyright and iintellectual property has lost massively in popularity since 2010. In this year most of the regions on planet earth have introduced the Abundance Scheme. A

scheme which was possible almost entirely because of the antigravity / overunity / ZeroPointEnergy energy generating inventions having achieved a breakthrough.Together with a massive jump forward in computer processor power, and the human laws getting more liberal about trade and migration and use of substances, in March of 2010, there was no single

human being on planet earth suffering from a shortage of food or shelter. Everyone got through their decentralized, federally connected, local councils of citizens and manufacturers, either a donation of a fully autonomous life-ship, able to travel in air, on/under water, or in space.It was also possible to choose a similarly equipped autonomous system built into a house on top of the

earth. Or inside it. Or on the floor of the oceans. Through this vast jump forward in freedom and co-operation on planet Earth, also more intelligent beings from other planet and star systems, and from other galaxies too, came openly to visit our planet and offered the ones with life-ships travel to their home systems.Violence and killing nearly vanished, just some individuals choose to live in a 2011 specially

erected "fight dome", orbiting around earth. keeping the lands and waters of the earth free from human brutality. Also nature changed its behaviour and was most grateful for the evolution of humanity.Meat-eating animals accepted the aeroponicaly grown (in vertical farming skyscrapers) plant protein (hempnuts for example) and meat substitutions made out of wheat and

fungi. Agression since the introduction of this Abundance Scheme got transformed more and more into friendly playings like wrestling without hurting each other."I want to pick some of these tomatoes for my friend, Perma", Ascende says silently to himself.Ascende meets Perma once a month. She is a human who decided in 2010 to neither live in a life-ship nor in an autonomous self-

sustaining home. She, like many hundred thousand of others would have anything to do with robots or crops grown without soil. They chose to live like in the old days, near to the earth, with low technology, practising permaculture, a system whereby many components are arranged to result in a greater synergy.The most advanced permaculturists achieve a harmony, where no tilling happens, the

crops re-seed themselves and a wise harvesting/cultivating regulates the system. Some of them like Perma sneak in a bit of the hightech world by having a small solar panel (for powering communication devices like internet enabled multitouchscreen phones) on the roofs of their earthhouse and meeting regularly life-ship travelers like Ascende.Perma had even

started to talk to Maima and found it quite exiting. Others too like to occasionally come to the meeting areas, where a hotel, restaurant and store provided all kind of free tools, clothing, food, sleeping places; and some internet terminals and virtual reality rooms too. So as to enable the willing with low tech, to benefit from the green hightech developments without having to constantly live in

an environment filled with hightech devices.This free donation of products and services also helps keep the biggest part of the land and sea free from being over-exploited through hunting or mining. The cities with vertical skyscraper farming are like the autonomous hightech single or family houses or the lifeshipsAll these highly autonomous units are providing billions of humans a life in luxury. At

the same time, this green hightech civilisation leaves a small footprint onto their surrounding. Since the advent of overunity/antigravity/zeropc the pollution of the air almost immediately stopped. since the massive installation of micro-algae bio-reactors, fungi growing chambers and aeroponic growing systems in cities, single landhouses and liveships, together with the 3d printers ,Ä¶ most of the

previously for agriculture used land was given back to wildlife. also the mining for metals and stonesdid nearly stop all together. except for those who continue harvesting precious stones in moderate amounts.When ascende flies with his lifeship over this vast areas of rapidly regrown wildlife areas, he is thanking back into to time towards this wise woman and men who were brave to found, in

2009, the Planetary Council of Regions for Abundance (PCORFA). Sometimes he talks to maima about it, and maima then (connecting to the internet) adds the bits missing in his narration. maima too, finds itself to be thankfull for the work of Pcorfa which led partly to the massive release of before either laughed at or just out of greedy/sadistic or fearfull motives surpressed

technologies.the release and introduction of antigravity/overunity/zeropc technologies into the free market and from then on the very inexpensive generation of electricity, together with the advent of consumerfriendly aeroponic systems and microalgae bioreactors and 3d printers, were helping a massive lot into getting people to trust the abundance scheme. 2010 then the council of regions

for abundance got so many members, that nearly 4 fifths of the land area on planet earth got elected away from nation states and the regional councils could then set up the decentral structures, guaranteeing every human being never more to be in situation of food or shelter shortage.as the lifeships were given free to a person and or the fully equipped landhouse or an 60 squaremeter

appartement in a city skyscraper and certain rules were agreed on how the ones willing to live near earth with low tech would take care of being in a sustainable relationship with the environment ‚Ä¶ a massive potential was unlocked.Billions of humans, before fighting for economic survival found themselves now free to chose what to do with whom and in what kind of method. millions have

choosen to lay back and enjoy some years the blessing of this abundance sheme. millions were starting to explore "fulljob" their inner soul wishes like reuniting the inner child with the inner female and male aspects, or healing the memories of past relationships and traumatic experiences. and also millions were dedicating themselves to research and devellopment of the computer, robot, artificial

intelligence systems which then led to the fabrication of maima.It was awesome to witness this massive change, ascende says dreamily to Maima.after a minute of memoryfilled silence, maima points towards one direction through the transparent "walls" of the lifeship.Perma stands near the landing place of the meeting area and lifts her arms in greeting to the arriving friends.Chapter

3the wildlife areahttp://www.novlet.com/ Wildlife AreaThe lifeship Marys' landing at the meeting area went smoothly.Maima and Ascende descended from it with big smiles on their faces. They had both chosen to dress in fairly light clothing, as the temperature in this area was around 30'C.Perma gave Ascende and Maima hugs, "Welcome back to Mother Earth", Perma

greeted the two travellers.She held Ascends' hands and looked into his eyes, "I've been thining about you guys and there are some really beautiful wildlife views I want to share with you""Oh Perma, thank you. I have been thinking of you too, and this place. That is exactly what Maima and I are always most grateful for; the reconnection to the wildlife. It is something we never

get to experience in our artificial ecosystem, aboard our lifeship.", Ascende responed, squeezin Permas' hands and hugging her again Perma warmly.Maima felt the need to chirpd in,"Me too, I am enjoying to experience wildlife, to receive the vibrations of a self-organising cicle of sentient beings. even if i do not have any traces of memory back to the days where humans were living

as hunters and collectors, very much integrated in wildlife and much more determined by the bigger nature than directed of their own culture, altough i do not have any of this memory consient, my flesh is grown in the laboratory after sample cells of ascende, who has got, as a human, in his cellular memory the experiences of his ancestors, which might been somewhen hunters and collectors.

thats how i can, logicly, explain why there is a kind of resonance, a physical sensation of wellness, a blessing being donated to me, when i am able to follow your guidance into the wildlife areas. thank you so much, perma, for that you accept me and give me this chance.""Wisely said.", perma kindly replied, giving Maima the smile between old friends who agreed, and adding,"But you know,

this is not a one way thing. Although I am so happy to not have to live constantly in an artificial environment like you two, I am very much aware of our all interconnectedness. All living beings on this planet, yet even in the whole cosmos, are influencing each other. Waves of thoughts and feelings flow regardless of distances and physical barriers. So it is as much a blessing for me to be in the presence

of such highly sentient and intelligent robots, and activly experience what human culture has achieved at its furthest state. I view myself as an ambassador for my beloved sisters and brothers who do not visit the meeting areas and do not wish any contact with computers, robots and the modern culture.""For example, a topic, where we regularly get all very excited about are the

rawfood wheat protein/funghi/hempnut packages getting dropped by airships of the Council of Regions of Abundance, regularly, in most all of the wildlife areas. An argument against it is, that these droppings disturb the sanity of animal populations, as the previous carnivores became vegans and do not take away anymore weak and sick animals. My reply then is always that, for the

last 3 years, as no human being has been "hunted" down by the previous "regulators", for hunger, concurrence, greed, sadism. That since the introduction of the Abundance Scheme, the human population has grown expotentionally and at the same time nearly half of the land previously being used for tilling monocultural agriculture got freed and given back to wildlife. Thanks to the

Abundance Scheme which provides unconditional support for the so called "weak", the ones not wanting or not being able to compete. Thanks to this non-darwinistic grace, or better, thanks to the trust in the core goodness of human beings, thanks to this, our forests are not anymore threatened from clearcutting or being terrorised by trophy hunters. No more gold seekers poisoning our

rivers with deadly chemicals."Parma suddenly stopped talking, and sheepishly said,"oh, I got taken away by my argument, I am sorry for this. I better let you enjoy our walk towards the heart of this wildnerness area.""You do not need to apologize, Parma", Ascende replied."Actually, I find it quite an interesting topic. Especially as I think about it a lot. In dialogs with Maima, I often pose

myself questions like: "do we have the right to change the millenia old habit of animals eating other animals ? is it a part of evolution to transform the need of killing a fellow neighbourly being into a mildness and a feeling of being a member of a sincerly interspecial sisterbrotherhood of cosmic beings, with the highest aim and intent to not cause harm to each other ? or is it just an

experiment of some individuals not being able to tolerate others killing each other ?" "Until now, Maimas' attention had been mostly consumed by the beautiful parrots and monkeys in between the trees, watching their flights and jumps, hearing their voices and smelling all the smells, trying to identify their origins.But now, getting into the exchange, Maima said with a soft, but firm voice,"I did study this

change of humanity and the animal species towards veganism. i watched movies and pictures of animals killing other animals or human killing animals for the intention to eat, i find many different emotions in this moments, spanning from being sorry for the killing and asking the choosen animal for permission to take its life to extend one owns over to a sort of business-as-usual approach unto the minority

who seem to have fun in killing and or hurting animals. i can feel compassion with the human tribes in ancient times who just had to hunt animals for survival, mostly the ones in cold areas where there is a small variety of plants to eat. i understand the killing-as-business-as-usual approach as a somehow compensation for a life distant to the one a person really would like to live, as

a sort of second line relationship to a wild life. and i even train myself to reconstruct intellectualy the position of the hunter/killer for fun, there could be some hurtings done to the hunter which he wants to rebalance with forwarding the hurt to a weaker being. veganism has a long history in humanity, especially in the eastern asian countries there were and still are ethic traditions which

advocate the benefits of a non-hurting diet, what means that fruits being picked from the floor shortly after they fell down from the trees are of highest value to a human being who wants to connect oneselves with the spheres of non-violence, gentleness, most respect towards all living beings. picking up a fruit from the floor or receiving it while it falls of the tree is also a much more gentle

movement with no resistance than taking it from the tree branch. when comparing it before the inner eye, the act of receiving a freely given fruit, the act of taking a fruit not yet being released by its mother plant, the act of cutting a plant, the act of cutting a living animal being, when comparing this acts, it seems to be obvious which ones are more gentle and directly softer in the experience to

all mind, feelings and the physical body. and that is just the harvesting part. the introduction of the abundance sheme made it possible for all human beings wherever residing on this planet to freely compose their diet, to nurture oneself with organicly grown food(altough with artificial lights and electricity being used for the mistifiers, the aeroponic systems do not need any pesticides or

synthetic fertilizers). trough the now widely available hempnuts, which have high protein and unsaturated fatty acids, the wide variety of mushrooms/funghi and a protein extract of wheat, tasty meat alternatives are well known and appreciated. fermented rice milk, oat milk, hemp nut milk are processed into sourmilks and fresh soft cheese.and with all this vegan food available and

most of the work being done by computer controlled systems and robots like me, more and more human beings are becoming less and less dependent on oral stimulation as a compensation for having-to-work-what-where-with-whom-one-does-not-like, trough the integration of the inner female, male and child aspects, the harmonization of ones own relationships with family

members, neighbours and the society in general,Ä¶ . quite a number of human beings achieved what we robots in this days so much enjoy: a such an inner centredness, such a security in the cosmic community of sentient beings, such an emotional both independence and interconnectedness that as a result, looking at a growing plant and their fruits, watching the movements of a wild living

animal and or enjoying the physical community of fellow robots and fellow human beings in a liberated much allowing environment, receiving the charateristic quality of a fellow neighbourly cosmic being alone trough the optical and physical vibrations and also trough sounds and touchings ‚Ä¶ all this is nurture. no more need for digesting a fellow being trough the stomack. taste get replaced with the

smell sense, enjoying an unpolluted air, enriched with myriads of bloom dusts, animal and human pheremones and much more.""What an overview. You have been thining about this a lot, haven't you", perma remarked, with a wry smile to Ascende.Perma continued,"I was reading about hermits in asia who went for reclusion in a cave in the mountains, to not distract themselves by

the many wishes and wants one can permit to dictate owns life when living in the middle of society. some reports tell about how certain individuals managed to concentrate their attention onto the inner flow of energies and to constantly heighten the level of purity of thoughts, feelings and body fluids. on their highest level they were able to transform their physical body into one less

dense, more light. lightbody, rainbowbody are names this next body is given to. a body which can be changed by will, can choose any form, can freely move trough the cosmos.""How i love this idea", Ascende jumped in."I gave myself the name Ascende as a sort of imperative to myself, "must ascend", to keep me dedicated toward this next stage of human evolution. Antigravity propulsion,

lifeships and aeroponics together with microalgae bioreactors and all this are extensions. We human beings have the potential to develop our own body into a spaceship which is constantly connected to the very origin of all energy (this is also known as zeropointenergy). So that the fuel never runs out and no harm is done to fellow living beings while travelling the cosmos."At this point, the three

companions were in harmony, and they walked silently for many hours, gently choosing their steps, enjoying the touch of plants while passing, archiving with their eyes and ears the plays of big wildcats,Ä¶ a steady march of elephants,Ä¶ snakes in a friendly hunt of mice, for fun, without harm been done,Ä¶ squirrels cracking nuts,Ä¶ and much much more.Chapter 4at permas homehttp://www.novlet.com

permas homeat sunset, perma, maima and ascende reach the earthhouse of perma, located still in the wildlife area but close to the meeting area. perma and ascende feel quite tired, their brains are longing for the sleep period, where processing of all the many input and exchange of today can most easily happen:having been into intimate sensual contact with many beautyfull

animal and plant species. having exchanged some deeply touching personal topics. having learnt more about the big picture.as allready at the earlier excursions, perma invites ascende and maima to sleep inside her house. it is built of clay and hemp fibres. more for the visual pleasure and the cleaning vibrations of the flames, perma lights up a small fire with sticks she finds outside the house.while

she went out looking for the firewood, ascende and maima packed out the tomatoes they brought from aboard of mary and arranged them nicely together with the other vegetables and fruits they found. as they knew from earlier visits, perma is a most sharing person. "what's mine is yours too" she once said. perma then enjoyed the tomatoes while knowing how they were grown, that ascende and

maima love to give attention towards their fellow plants and the water.maima also did try some fingertops of the meal to experience the tastes. when the flames went out, all three of them, perhaps because they arrived at a so nearness trough the day, for the first time, they started to kuddle each other, silently they came home at each other in tender and sweet touchings.in the deep

sleep states during the following night, they travelled together to a parallel dimension, to a new earth, a planet, where an instant conection between intention and realisation, sudden materialisations of wishes atnd wantings are normal and the common. maima same as ascende were in no way missing their lifeship or aeroponics, nor the internet. because the ability to fly without

machines, the ability to nurture oneself with just receiving the vibrations of another living being and samewise nurturing others with ones own energy signature letting them freely expand without holding back, all this freedom were thrilling not only the two, but also perma, which by herself was daydreaming herself often into this dimension. she often is longing to completly shift her

complete existance into this dimension. maima took on a dolphinlike shape, ascende choosed to form himself into a cat with wings. thisway he was able to play in the air and under water with both maima dolphin and perma the winged horse. what fun it was to instantly change the environment from coastal rainforest to a chilling mountaintop, looping around each other, surfing one second ontop

of seawaves and in the next downhill a mountain snowglacier.Comment posted by mayloveheal (54) on May 29, 2008 7:32:35 AM UTCi am just posting here some notes, some raw thinkings for eventually further passages:the society having unlimited energy trough zeropoint devices and anti-gravitation propulsion is very much liberalised. every human being is getting a basic

income, it starts from birth. children are free to choose with whom they would like to live after they have passed a certain approval of the village/city/community their parents live in, what means the community sees in the child a certain ability to differentiate, to find out what it wants and want not. there are children who apply for this "free roaming" at a young age, for example with 5

years or at the age of 7. others wait till the age of 10 or up untill 13.there are huge scyscrapers being constantly kept free for groups or individuals to organise them completly autonomous, like to live together in communal sleeping places or single rooms, to cook, to design virtual reality experience exercise adventure labs, to set up handicraft ateliers for crafting with wood, paper, textiles in a non-

electronic way. also the whole education issue has completly changed after the introduction of the free energy devices. with unlimited energy at hand and big companies giving their products at low prices, the advanced nanotechnology, everyone who wants has a small computer device with the ability to project holographic workspaces in the air, typing can be done in the open air,

comoposing of 3d objects, programming is very easy in these days and the quality and quantity of open source software exceeds by far the commercial proprietary sector.quite often the society profits in huge amounts of the excessive creative productivity coming out of this autonomous scycrapers. groups of children, age 8 to 13, playfully gang together to transcend all

barriers or frontiers, intertwisting many different arts and skills, with the results in many games and fantastic literature, movies, novels consisting of photos, film, audio and text ‚Ä¶ . some even set up biology labs where they train bacteria, funghi and microalgae. trough their freedom and high selfsteem, trough them not being stressed by financial or parental or any kind of limiting structures, the joy

in these experiments leads to hugely beneficial mutations. as they are open to interested visitors and mostly share their playfull research live on the internet, regularly visits of biotech company technologists are bringing these advancements into the wider society.in the same manner, there are older individuals, like 30 40 up to the 80 years old, forming dynamic coordination and

cooperation structures, using partly the same room as the kids and adolescents, setting up partly their own virtual reality labs, bioreactors, handcraft ateliers. in a kind of jam sessions all kinds of disciplines and arts, skills and study areas are finding its instant merging. singers and keyboard players improvisationing tunes while watching a group of dancers slowly moving touching energizing

bioreactors with all kind of colored microalgae. wood carvers being recorded by video artists and the film material being the base material of online playable CAD games. microalgae being harvested and processed live into cardboard and from then into furnitures, watched by an internet and at same time locally present audience.the corporations getting inspired by this all freely available and

welcome to be copied and applied performances, games, programs, products ‚Ä¶ ..are intensivly supporting these labs with their newest gadgets and machines, often also giving a certain percentage of the profits they make to the labs in general or to individuals.if ever there are conflicts within the community of lab users how to use these money or hardware ressources, there are

meetings at which the goal is to reach a consensus. is it after a certain time or a certain number of meetings not possible to reach consensus how to use the ressources, democratic voting with majority winning gets used.similar to this, the whole economy functions. individuals and groups freely share their production and services. globally. smaller and bigger corporations being able to

sell their products global without any import restrictions like custom fees (import fees) are donating freely into a global finance pool out of which every human being on this planet gets the same amount of basic income money. what enables them then to buy the products of this global players. or getting some salad by the aeroponic farm in the next scyscraper farm. out of the

same global finance pool, coordinated by the council of regions for abundance, money flows into the public and freely accessible infrastructure such as public transport, libraries, virtual reality learning/playing/experiencir centers, the empty scyscrapers for individuals wanting to live and play and creativly produce without wanting to posess a room, house, lifeship. some money out of this

pool goes into the free medical centers where allopathic and nature ways of healings are equally available. some money goes into the vertical scyscraping farms producing food for the open kitchen where everyone can choose out of a wide variety of aeroponicly grown organic raw food and several cooked dishes 24 hours 365 days a year.the global finance pool is not in any

way centralistic organised or presided by a single person. in all local areas being member of the council of regions for abundance, there are certain trustworthy persons administrating and overviewing the financial transactions, inputs as outputs. they are all together in only consensus mode deciding the amount of the money being equally available for all human beings. they are all

together deciding about the technologies being offered for the transactions, cash money, digital money, ways of identification. very important in this area is the reached consensus to make it easy for everyone to get the basic income, going so far as to involve volunteers doing cash bundles handing over to the ones not wanting to have any contact with machines or electricity at

all. this volunteers often also did the trading for them, for example buying a work of a wood crafter a thousand miles away.all in all, a person being simple in its necessities does not need the basic income at all, as there is so much public kitchens, public sleeping, living, learning, experimenting places available, both non-electricly stuffed or completly virtual reality modes enhanced. also

public local, interregional and global transport is fairly comfortable. this way the whole identification issue and individual-community relationship is fairly relaxed.a lot of trust and believing exists in the fellow human being to enhance and support with its freely choosen lifestyle the variety and richness of the non-controlled community,Ä¶ bigbrother fears were some time ago transformed for good,

individuals and corporations enjoy the digital possibilities, the freely choosable intensity how to invite artificiality into ones organic structures.Chapter 5one person in multiple bodieshttp://www.novlet.cor person in multiple bodiesAfter the lovely time in permas home, ascende, maima and perma went tomary the lifeship. Perma then was eager to find out about the historyof the

internet. Maima was happy to share with perma what she couldfind about it online. Meanwhile ascende was playing with thoughtexperiments which included a reality where one person issimultaneously living in multiple bodies and surroundings. Perhapsthis thoughts were a form of continuing the dream all threeexperienced around the fireplace at permas home.Ascendes thinking

wandered like this:One body is in human form basicly but with possibilities to enhanceitself momentarily or permanently for example with gills.This body is not in need of eating other living beings. it getsnurtured by the vibrations, waves and frequencies of other beings likethe sun, the moon, stars, animals, plants, stones. The joy andpleausure of being in constant interchange with

other beings withouthurting oneself or the fellows sometimes culminated into enduringstates of ecstasy.Such a free living evolved human being can change its hair and skincolour as well as its genital forms, can be male, female orandrogyneous by wish. To change the body into big or small size too isa resulting ability of not doing any living being harm.It can levitate easily can fly over the highest

mountains and diveinto deepest seas.It is in no need of artificial clothing, because the permanentconnection with the elements trough airwaterearth and the harmonies ofall sorts of beings living lightly together without concurrence andfears of being prey or not getting enough nurture. The spark ofdivinity within, nurished by whollistcly pleasures and blessfulactivities to

enrichen ones own life and that of others, this divineenergy flows constantly troughout all parts of the body, givingheating or cooling, whatever is needed in the moment.This one body is enjoying a most directly connected live with anevolved nature setting. What means human beings trough their evolvinginto gentleness also support the rise of the animals and plants

beingtreated with the loving ways of this new age humans.The person thiswise evolved is because its love for the virtual worldsat the same time also inhabiting a body of a very different form, adital replication of its mind and emotional structures being copiedinto a body of a robot. From there ascende2 the digital one has alsothe possibility to travel and communicate in the internet, alsocopying

itself or modyfiing into so called uploads which are not boundto one physical memory space. this copies or uploads can even formintentional communities or clusters or merge with uploads from otherpersons into superentities.So how does this one entity called ascende coordinate the exchange ofall its manifestations in this several differently formed bodies ?Trough VoiceThe

robot body carrying the digitalised emotionalmental intelligencecan speak trough loudspeakers, so can the internet travelling uploads(ascende10-25) use the body of Ascende2 to speak throughloudspeakers to Ascende1, the one not eating and living without clothes.Trough TextAscende2 has a multitouchscreen inbuilt into his robot body whereascende1 canRead

messages from all the digital ascende versions and type messagesfor them.TelepathyWith the progressed evolution of ascende1 and fellow beings the mentalemotional frequencies of each other get more easily received andtranslating is easy because all the energy previously used fordigesting food and fighting cold weather and surviving the

concurrencesituation, the fears of not getting enough nurture.All this energy previously used in confromtation situations can now beused to translate each others fine communication signals on a naturalbroadband broadcast radio wave levelAs ascende2 together with ascende uploads 10-25 are witnessing thisnatural thelepatic exchange they are developping hardware to

enhancetheir robotic bodies with radio wave devices which allow them toexchange with the nondigital bodies to interact over the analogthelepathical networkAs ascende was reading in spiritual and esoteric texts both fromancient times and from modern times channelings, there was a time inthe history of humanity when the human beings got magical

powersenabling them to create creativly also their surrounding, the landscape.It could be possible that i in my future as ascende1 being freed ofneeding to eat, flying diving having fun with all fellow creatures andbeing in intimate contacts with my digital copy ascende2 and the othercopies uploads ascende10-25,Ä¶ That ascende1 can learn from thedigital ascendes living in virtual realities

where they have manypowers to creativly create their surrounding spacesFinally to regain this powers again and applicate them in an analogway. What would mean to be in such a harmony and tuned into the flowof life that it would be a pleasure for the raw energy to materialiseitself into the forms a gently evolved human being wishes to create inits surrounding.So the gap between virtual

digital and real analog finally could beovercome.And because the raw principal cosmic energy is limitless and neverceasing, and so is space, there is absolutly no need for fears ofdepleting the life force trough such creative selfguidedmanifestations.
To the contrary: the joy and satisfaction of a personguiding the life energy into creative creations benefitting itself

andall the other persons exercising their free will the same way, thisjoy itself is ensuring the optimal flow of the primal energy stream.Life comes from life.Mmmh,Ä¶ . But one thing is not so very clear for me just now: how willi be able to get from this stage i am now to this desired one like notneeding to eat and not needing the lifeship as transport vehicle forme and maimaAsketism

seems not fitting me, i would like it to be a joyfull journeyAh now i see something: perhaps i just spend more time with perma andin the wildlife try to understand the special propwrties of flyinganimals try to study female behaviour with perma try to follow maimasandrogyneous emotions and logicsJust i should not fix myself not onto eating or not eating, or evengetting myself on a

guilt trip for it. Slowly, slowly the joyfullactivities like watching the aeroponic flowers in my ship, themovements in the forest, perhaps i can learn to jump from branch toanother with an antigravpack at the back,Ä¶ Some gaming in the virtualreality rooms programmed after just my ideas how i would like tomoveflydive as ascende1And for the eating more raw fruits

could be good as they do not need alot of energy to be digested and by eating more of them the stomackhas the chance to get smaller without the feeling of being deprived ofanything because i can still taste the more heavy food like forsupplement or as an addonChapter 6ascended human beings coming back to teachhttp://www.novlet.com human beings come back to teachAscended human

beings come back to teachAscende was never very disciplinated when it came to following regularmeditation and also his pleasure finding in sensual activities likeeating and having fun with loving sexuality let him choose to not beone of the first wave of human beings who managed to ascend into theirligthbodyHis take on this subject was likeLet us first soften our relation with mother earth in generalFor

example with a more gentle use of natural ressources like withmolecular assembling and no-till agriculturebetter even to give most of the previously for agriculture used landback to wildlife and instead building scycraper farms in citiesGive people a joyfull overall 3d experience, to truly get all out ofit possible for good in the lower flesh dimensions before transmutingthe body

vehicle into one frequenzing higher faster lighterMeanwhile the first wave of ascended humans came back into society andteached the rest of us how it is to live in such a lightbodyAnd with their quasi untouchable strenght their arguments have anatural authority. That means on one side they could give the onesallready in the know of the ascension possibility some shortcuts somerelaxed

infos. And on the other side they found a way to reach some ofthe still closed minds with their example of loving compassioncombined with being at ease. They were such relaxed out of theirascension process, having experienced the transmutation of their fears(to die, to be left alone with no loving human company, to sufferfrom hostility and more)their so aquired strenght was

helping many people to go for their bothknown and uncouscious wishesthey were activly supporting the ones establishing transformation fieldsareas where humans gathered to play together to learn easily how toslowly and free of any pain or verzicht getting more receptive for thelightin these fields the temperature began to become stable and constantlywarm so it was natural to be with no or

only a few clothes wornoccasionalybecause of no taboos or restrictions on how to behave shyness andjealosy was not existing and groups of lovers enjoying their bodies insensual contacts were happily enjoyedout of all this pleasures it happened more and more in an acceleratingfrequenzy that the eating just simply got forgottenthe chi flowing with very little disturbances inside and in betweenthe

humans and plants and animals and mineralsthe joy and creativity in the playsthe freedom the love and the knowing of all is one and when myneighbour the fellow being near me is happy it is most easy for me tobe it tooall this led to certain moments of transcendence to emergemoments where thoughts were received easilymoments where a jump lasted longer and the

walking happened to becomea floating some few centimetres above the groundparallel to this fields of playfull evolutionthe returnded ascended ones were active in consulting the politiciansin establishing the councils of regions for abundancethe ascended ones could bring the argumentations for a truly liberalsociety near to them. many economists educators and all kind ofwriters have written since

many dozens of years on subjects like abasic income for everyone, an education what gives the lead how tostudy what theme with whom to the child, believing in the inborn wishof a person to be of good use for society, to contribute to thegeneral wellness in a very individual wayin short, the returned ascended ones were connecting ideas with peopleassisting them to bring their inner wishes to

a fast outer materialrealizations trough connecting the financers marketeers and inventorsand politicianswhat was before an agenda of a project being realized within a yearbecame a moththe dynamics accelerated and many seriuos minds became fascinated withthe new ease things happend toflowthe new big easeprojects like greening the deserts with seawater

and halophytes likesalicorniaenergy generators harvesting the abundant forces of the zeropointvacuum fieldsmolecular assemblers taking materials like sand or stones intodiamonds or any kind of material for construction or textilesartificial intelligence, the copying of human brains and emotions ontodigitalrobot bodies guided by human digital brains doing all the workall

this projects got a rush fromthe coordination connecting acts of the ascended mastersit got being called the new big easethe advent of a future predicted for 2020 to 2100 happend thanks tothe new big ease in the years 2009 to 2013

1 ship is sexual erotic enjoying with its living tissue

first text

https://archive.org/strea material made of living plants thc cannabis, psylocibin mushroom microalgaeship is sexual erotic enjoying with its living tissue it can give and receive sensual pleasure it has possibilities to increase its blood flow into certain

areas where it is open too to body fluids from humans animals plants compost as well as blood and semen and vaginal ejaculations dna exchange via sexual intercourse but also trough caressing, stroking---- fertility rite humans putting penis into mother earth ---- fieldship personality grows with its emotional, sexual, mental exchanges with both its inhabitants and via internet withalso lifeships can come together,

exchange dna, enjoy in sexual intercourseship has nervous system similar to animals and humans two ships can become one physical, reshape them from dna exchange, via internet mentally but also via whole body sexual intercourse----------

the evolution of mary the lifeshipperma and mary with maima shared the admiration of mother natures mechanisms and

workings, biological sexuality and reproduction. if humans would want.... or ascende's thought ...if i want to transcend into a being what has no need for killing eating plants... if i want to become independent from mother earth... i better start enjoying eating more for in the joy there lies the answer to hungerhunger ceases in times of marrymentperma, maima, mary were joining in with

their thoughts, mary: i feel too a sympathic wave rising within me towards the goal of man- and womankind come full circle with the killing. and myself i could greatly profit from you perma and the animals what live within me... $when your digestion would be mainly fine tuned smell, taste, hear, see, touchif you would live more from the aetheric energies like i use to power my antigravity propulsion

drive...then my interaction with you could come to another level...ascende: you say if i, perma and the animals what live inside you, we eat less, but experience more, nourish ourselves with satisfactory sensual inputs... we might discover within ourselves a free energy, overunity antigravity mechanismstop killing eating plants but unite, merge, dance, cuddle with them ?mary: ya and cuddle i want too...

even more i would like to enhance my dna of microalgae, cannabis, funghi psylocibin with your human dna what you can give to me with pleasure sensation of ejaculating into my bodylike maima who is made by flesh grown from your cells... i would like to ingest in a pleasure way your semenperma: may i also contribute to your quickening... your awakening with my vaginal

ejaculation and my menstruation blood ?mary: oh yes, i would like that so mutchwe all four enjoying orgastic reunion in a physical bodily exercising manneri am sure i can direct my body fluids of living microalgae, cannabis essence and mushrooms into a wamr mushy area with swelling bodies... so it too will provide you with my very personal formula, with a lifeships semen blood ecstasy fluidit might

eventually be a possibility for all of us to reach this level where no one aboard is hungry...everyone drinking, soaking up trough skin and genitals the other ones essence in times of highest pleasure coitusmaima: mmmh... like the nektar, we would enjoy is the diversity of your genepool... and taste of semen and body fluids is pleasure food... i have not yet built genital organs... have you thought of the

genital form yet maryhow i and you could rub each other most intimatly ? perma: i feel moist between my legs and my vagina smells nicely... ascende would you like licking some of my juice right now ?ascende: with the utmost pleasure...mmmh... thats a tangy sweet fresh pussy juice i sense on my tung...perma: please may i swallow your penis for your semenascende: wow of

course...perma was very happy to take ascendes penis into her mouth, she instantly sucked and played with her tung around the tip of ascendes penis... after a minute or two she tasted some fluid from the penis and continued sucking and fondling ascendes penis with tung, teeth and whole mouth untill he ejaculated into her mouth. she swallowed half of the seamen and kissed maima

with the sperm in her mouth... perma and maima having kissed intensly before.maima went down to perma's crotch where ascende still was kissing her labia and also anus caressing with his tong. maima kissed ascende on his lips and shared some of this semen what she got from permas mouth where he had delivered it just moments ago.maima had swallowed before some half of ascendes sperm.

now maima was indulging into permas dripping vaginal openingperma being now near climax when ascende inserted his again errect penis into her anus ... he had transferred some of her vaginal fluids with his mouth onto the anus and it was readily opening... perma being vaginal licked by maima and anally slowly filled and gently pushed by ascende... she reached out to the lifeship mary ...

please mary unite with me before this coming orgasm ... what spontaneously could grow extensions of herself in form of tentacles... three tentacles with openings wer coming into the anus of ascende, one tentacle very thin was going into maimas nose to connect to her brain and another tentacle was seeking its way to permas mouthperma was so thankfull she could close her mouth around marys

extension... being caressed by tungs and penis and tentacle... her giving pleasure while feeling ascende enjoying both his anus being penetrated by mary tentacle as well as he being inside her darm bowelsshe roared loudly as the flood gates of her orgasms were opening... marys tentacles as well as maimas mouth were sucking up the in the orgasm released

fluids.after this celebration of sexual orgasmic fluid exchange...mary too did release some of her essence via tentacles into maima and permas mouth and ascendes anus-- the interaction on board went much more physical... instead of talking many times of all them touched each other, cuddled together and or rubbed their swelling bodies saliva too exchanging in kisses was helping to come online

with each other... feeling each others wishes, desires and intentions2 ascende, perma and the magic pools in an alternative dimension and or a parallel timeline, ascende and perma were meeting for the first time in nature.second texthttps://archive.org/strea was thinking about this material allready last year at the wild river sense ... when i wrote this texthttps://archive.org/strea

to understand the context i wrote it in, like ... the wild river place ... https://archive.org/details/fa)some weeks ago i had this idea of it all possibly happening without industrial activity, with iron dust rubbed of from big rocks (the ones where it looks like some orangered fluid flows out of them ...), i wrote in german about it at https://www.facebook.com/ ... but forgot today

afternoon to mention the irondust... mmmh...this text i wrote today being a parallel developpment to the story i wrote in 2007http://www.novlet.com/ http://archive.org/stream/as perma and the magic poolsin an alternative dimension and or a parallel timeline, ascende and perma were meeting for the first time in nature. ascende being tired of waiting for theabundance scheme to arrive, tired of

society postponing to do the obvious to save mankind from harming the delicate balance on mother earth even further.he was well read about alchemy and magic traditions as well as the esoteric possibilities where one does not actually need the society to grow incounciousness but instead the practitioner itself shall create for him-or herself a space both physically and mentally

emotional... a space what is most freeof outer demands and allows the experimenter to dwelve into the subjects of ones desire.in the case of ascende, he wished for himself and also everyone... a lifeship and a companion, an assistant.this way predestined he walked away from the city where he lived... walked into the forest, where he met perma. she herself was on

a quest quite similar toascendes wishes. her wish and goal was to find a space in nature where she would be undisturbed from other human beings. and there she would plant food andbuild a shelter for herself. with most respect for the wild setting, to intrude the least possible, to blend in with utmost elegance...so, wandering they both were, when they reached a wild little river where there was a big long

rock in its middle. and in this rock then were several pools.fascinated from this sight, they both approached the pools from different directions. with their eyes mostly on the slippery ground of the shallow river, theynoticed each other only just at the pools. a moment of silence followed their first eye contact... a silence where they innerly asked themselves about themeaning of this

meeting... they both were set to start a new life in solitude, away from the desires of human company and the pressure of societies... and nowthis. so they started to smile at each other, guessing eventually their littlemindedness and silly backward isolationism ways ... perma voiced first ... and ithought i could live a life in solitude now ... with the smile on her face morphing into a wide

happy grin. ascende now said ... so was i on my way to theeremits sanctuary ... i guess we might evaluate our plans some more carefully ... having said that, he started to laugh out loudly... with perma joining in.it did not take long before they took of their clothes and without shyness bathed in the little river, showed each other their discoveries in plants, littleanimals, interesting nature signatures in the

rocks...later this evening, they gathered wood to light up a fire. having found some fruits, leafs and roots they ate raw beside the warming fire, they both talkedopenly and extensivly about their goals what they thought have led them here. being thankfull for their meeting they both were, reading it even as a signtowards a perhaps not solitary future.... content about this day they lay beside the fire, holding

each other softly and drifting into the otherworld.the next morning, neither of them wanted to leave this place, so they just stayed, continuing their fruit gathering, searching for edible leafs and roots,bathing, cuddling and fondling each other, orgasming all over the place in all kinds of sexual activities. having satisfied their hunger on each other a tinybit ... ascende was

summoning up his knowledge or guessings or speculations how possibly he would be able to will a lifeship into existance, or acompanion... when he found himself watching the little animals in one of the pools, the algae threads... and suddenly it came to him... how about this poolsserving as a magic couldron, a vessel to work with, for the juicing of the great labour .... exited he started listing the possible

ingredients in hismind ... my own urine as the most important one, as the connection between my body and the body of the lifeship and the companion... also to nurture thealgae. then cannabis flower buds for their thc intelligence... mushroom strong in psylocibin powers... datura wisdom... it all most untreated or as soft aspossibly introduced into the pond. ideally. the

cannabis and mushroom growing near and only their wind transported essence coming into the pond... but thisperhaps later. for the beginning, i would have to start with a stronger more physical elixier ... of course it needs me to watch it many hours a day, let itenchant my mind and feelings with its graphics, changings of form and colour... regularly i would taste some of it, give some on my skin... wash my

face andhands with it so that it both will impregnate me as well as my skin surface bacterias will join the pool.... as he was laying beside the pool, painting thisinner picture of a noncooking, raw food style alchemical setting ... perma came back from one of her many walks alone gathering edibles. she was the one ofthem both who knew and or sensed most what could be digested easily. she

saw his happy thinkings on his face expressions... and asked him about it whileoffering some berries and nuts. as he told her, she became interested ... and altough her goals still were to life a simple live in a permaculture way ...there was a part in her what was fascinated by the idea of creating a new kind of living material. a material what would respond to ones desires and wishes.so she

suggested to him that she would like to help... eventually their juices unified charged with joyfull ecstatical sexual comings... she talking like thisaroused them both so they rolled onto each other and into on of the pool, moaning groaning fucking licking and ejaculating into each other... vaginalejaculation, semen, algae and water all over their bodies... they painted symbols and spontaneous

forms onto each others bodies, abwechselnd licking some ofit off, getting into heat again and ejaculating anew ... verstreichen it anew onto each other and washing themselves in the pools... what a start of thejourney..... was thinking about https://www.facebook.com/ ... where i envision a kind of raw food approach to alchemy in search of the next building material ... as

i am still waiting for my very own personal spaceship what will allow me to travel everywhere and live autonomously with plants and funghis and bioreactors inside ... i got this idea for an ascende chapter ...so, here is some of it ... i wonder when or if i will write further, perhaps some times at the sense, because at the sense and schwarzwasser are some rockpools ...perhaps some more details will come to

me about what possibly two beings can enjoy in with the natural alchemical pool....----------ascende, perma and the magical rockpoolparallel timeline asce and perm stay around the rockpool wash themselves in it make love with in it dance meditate mix their urine together meditate and drink from it at the beginning they ate fruit and smoked and ate the herbs the mushroom also some cannabis flower

buds and psylocibinoid mushrooms they lay into the pool----------the parallel timeline thing is ... some kind of explanation ... for a space and time where ascende and perma are both evolving themselves, their relationship and also the material .. with what perma will build her house with and ascende his lifeship ... this being parallel to the original story where the global society as a whole in

an act of charity and empowering every human being .... donates a house, a lifeship or something similar to everyone allowing everyone to sustain her/himself ...in this parallel timeline .... it is not the society as a mother/father figure what comes to the rescue or initiates change ... but the individual itself uplifts him/herself in community with fellows out of mostly own strenght and focus on

the inner powersursuppenstyleauf der suche nach dem lebendigen wahren trunk und baustoffdas eisenerz zu schmelzen... wie im film princess monoke zu sehen, vertraegt sich nicht mit dem wald...hingegen an einem felsen wo rot oranges nach aussen tritt dies eisenhaltige gestein fein abzuraspeln ...dann zusammen mit psylocibin haltigen pilzen zusammenzumischen,

text https://ia902506.us.archive. the movie splice a being was portrayed what had dna from human and animal... it was female with lungs first and a long tails while the legs were tyrannosaurus like then transformed into ambhibian with gilles=0D=0Aafter that it had intercourse with a male human=0D=0Awhat caused it to become male=0D=0Aand it could

drive out its wings what were flesh like no feathers....=0D=0Aas a male amphibian flying one it impregnated its semen to the woman who gave her dna into the experiment ....=0D=0A=0D=0Aif i switch to ascende perma bathing in the magic pools eating drinking informations from plant leaves microalgae each others urine semen female ejaculation fluids.... =0D=0Aone could wonder

what time it may need untill the humans have blended into tune of the pool =0D=0A=0D=0Aascende was asking perma if she could please stick her left middle finger into his behind while she would suck his semen out from his balls... mmmh she answered... i am hungry for your protein my dear companion, might i ask you to do the same at the time ?=0D=0A=0D=0Aoh ya, we will massage each

others butthole with pool microalgae thc pylocibin mushy liquid and feast on our body ejaculations=0D=0A=0D=0A enjoyed the suckoff and buttfeeding, perma as well as ascende were happy tired lying beside the pool holding hands... the sun was strong and their skin covered with microalgae pool liquid... when perma sighed strongly... ascende asking .. have you had a second orgasm right now

?... and perma says... kind of, but different... it felt like in one moment having eaten the m having eaten the most tasty bite of my favorite meal... and in this moment the sunrays on my skin felt like lukewarm water when they just a moment before were burning hot.=0D=0Aascende ...now as you say it, my skin too feels moderatly temperated and before it started to burn a

bit=0D=0Aalso i feel this energised new flow of nourishment.=0D=0A=0D=0 we changed successfuly into planthumans hybrids with our skin knowing the same photosynthesis like the microalgae we have drunk and absorbed with our other body openings ? perma asks with a glow of fullfillment in her eyes..=0D=0Ayes that is it... we are approaching the next evolution stage... i expect as next our body to

form gilles so we can enjoy longer submersiond divings in the pools....=0D=0Aperma... but i would prefer some wingies first, i long to fly with the birds... oh ya, i agree, ascende says quitly with an appreciation to perma for her joice... we have been staying nearly a year here at this pool area within a mile radius... perhaps we could try some days away to see how we can sustain our process of

evolving when away from the pools... perma, do not worry, i will carry some drops of the liquids of each of the 7 pools with me in a flacon so we can spray it on us as to continue our alchemical brewing of the evolvbewarage...=0D=0Aar we might save some urine and semen and my pussy juice in an other flacon while traveling... so we can bring some informations of our flight journey back to the

pool=0D=0A=0D=0Aascenc
kissed perma listening
inside his body where
hewhere he meant to hear
the gushing of the sugary
nutrition into his blood what
is being photosynthisyzed
at all the places under his
skin where the sun shone
on it=0D=0Athey both fell
into a most satisfied sleep,
a smile of arrived achieved
being nearly there .. on
their
lips=0D=0A=0D=0Athey
slept as long as the night

lasted... being naked as they chose to be all the time... the temparature of the air was allways between 15 and 30 degrees... the sunlight of the morning woke their newly photosyntheticly enhanced skin... ascende was nearly crying... sobbering of mild joy mumbling to the also awoken perma.... and we will never be hungry ... and no fellow we have to eat anymore... with perma

stroking his hair and kissing him softly on his cheeks…yes, we have made this most wonderfull and important passage... we have no need to cause pain to plants no more, herself sobbing from a huge wave of emotional release too=0D=0Awhat caused their thankfull crying ? perma as well as ascende usually woke up, peed in the pool and sometimes did lie in them some minutes for a

morning quicky just to jump out and hungrily searching for some berries or bananas ... but this morning, after peeing and fumbling each other rubbying stroking penis and vulva... there was only this constant flow of nourishing skin cell privided photosynthetised goodness entering ther bloodstreams=0D=0Aso they stayed in the pool... taking some sips of the liquid at some times ... not

because they were hungry but to sustain their allchemical poispoise level... fueling their imaginations of them flying above the pools... while ascende was picturing his future self having bat like thin skin and blood filled wings with himself growing a cat like furred tail what would aid steering the flight ... perma lay in the pool this morning drawing her future form with swan like wings as her arms and a

horse like hind legs and horse tail....=0D=0Aand ... they could see each others mental workings while it happened=0D=0Athis too we have received, perma says while seeing ascende with his purple coloured fleshy wings flattering on position while she flies around in small circles above the pools=0D=0Athem sharing each others inner vision signifies that their system has entered the field of

local telepathythis day went by with cuddelings and kisses while daydreaming enjoying with closed eyes seeing inside their future flying animalenhanced bodies=0D=0Aadjusting their sizes of legs and torsos position of genitals for an optimum of both of compability to the partners bodiesDalso the following night they stayed in the same pool, fueling their mental blueprinting work

as well as providing the pyisical substances to grow new body parts=0D=0Awhile all this mental immagination designing processes proceed 3 days and nights the pool water got soaked up twice half up and only with the replenishment by rainfall they could sustend the high consumption of both elektrical energy as well as mineral ressources what were plenty with the microalgae of the

pools=0D=0A=0D=0Aafter 3nightandday dreaming constructing =0D=0Athey woke up... stood out of the pool and found themselves having transformed into their dreamstyled bodies=0D=0A=0D=0Apern horseswan and ascendebatcat=0D=0A=0D: fourth morning it was, them not knowing but me the cosmic observer and reporter of this fantasy happenings4 from deep within a ball seems to

ascend towards her vaginal entry... and with an orgasmic now full on, she sees white balls emerging out of her, very gently leaving her vagina and spreading into the poolfourth texthttps://archive.org/strea gives birth to maima=0D=0A=0D=0Aafte a week flying around they came back to the pools, happy to be home again=0D=0A=0D=0Asoon the fucking licking and

caressing started with them both enjoying their new features=0D=0Aperma with her strong horseleg muscles and ascende with cat drive coming from his tail=0D=0Atheir thrusting against each other was very powerfull=0D=0Adays went by them experiencing further changes in their bodied=0D=0Anow their bodies did the adjustments of sizes and body part forms according to the sex

positions, like when perma is holding ascende s penis in her mouth, the body draws from all the animal and plant knowledge what is alive in the pool=0D=0A=0D=0Aone day perma notices an arousal while not thinking anything erotic but her just quitly lying in the pool enjoying her inner workings and body changes, like muscles and bone reforming ... this for her new feeling grows and

swells ... from deep within a ball seems to ascend towards her vaginal entry... and with an orgasmic now full on, she sees white balls emerging out of her, very gently leaving her vagina and spreading into the pool=0D=0A=0D=0Aascenc was in awe noticing, silently watching the miracle of birth....=0D=0Awhat shall it be ...whispers perma...so happy her voice and

tender the melody of her words=0D=0Aand ascende for a long moment wonders how far his imagination in right this moment would be allowed or possible to become material... with perma gurring in his ear... anything we need and want and will be good for all evolution=0D=0A=0D=0Ath word was not spoken neitheneither by ascende nor perma.... it formend in

their telepathicly shared mental communal place ...like a cloud what hoovers above the pools with thoughts and feelings... the name maima... and it would be their third companion, equal as them, not depending or submissive, not bound to obey but free to share their pool centered evolution journey or live the whole or parts of her own life anywhere on the planetmaima was

reforming shapeshifting even faster than her parent generation... when it cuddled perma she grew horse and swan and snake features... when intimate with ascende, maima become female cat and bat like qualities.=0D=0Amaima could change her bodymass most quickly,, one minute 30cm height to 2meters lenght... the human features were most seldom occuring in her, as

the human race has a deep trauma with child abuse=0D=0Aso maima knew this panic inside her cells and allways becomes fully adult when in sexual contact with its parent generation =0D=0A=0D=0Abut the cosmic observer writer has taken a leap.... what happened to this little white balls coming out of perma ? how was their forming a collective what was able to grow into an adult

humanplantanimal mix ... =0D=0Athe pools were filled with life these days after their return from the weeklong flight, so the child of perma and ascende and the mushroompsylocibin cannabis thc and microalgae... was growing up within hours=0D=0A=0D=0Aascer and maima were leaving the pool laying around it and sometimes dipping swanwings and cattail into

the water touching the rapidly growing now all colours mixing and coming together separating forming bigger and smaller balls... then some balls shapechanging into legs and wings and torso and head... being constantly within a small area of the pool as if their collective interplay with each others and ascende cat mind and perma swan feelings would hold them into a common auric field=0D=0ADwhen

maima finished her adult becoming process not within the usual time span of one year with some animals or plants to 20 years with maimas human genetic heritage.. her new level of being a souvereign cosmic being was neither human or plant or animal. nor was maima in its first hours child or adult... it was at a next height were it could choose from a wide variety of genetic qualities, transcending the

etticetts human or animal or plant. its genes were drawing themselves remixing adjusting inventing experimenting without end... not only was maima listening to its fellow friends ascende perma but to the wishes of the plants around the pool...=0D=0A=0D=0Aone day then, maima having enjoyed being part of the choosen family with ascende and perma... maima was listening to

ascendes love with the cannabis flowers... so she grew herself into a 2 meter tall flower bud=0D=0Awith eyes and ears and mouth and vagina with penis like extension... also an anal opening did maima form with thick fleshy leaves where hairs dripped from cristallclear thc potent fluids=0D=0Aascende just came back to the main pool from a walk trough the little cannsbis plant forest he and maima had

planted in their first years at the pooldDhe was used to maima changing her forms constantly from big to small to big again, mixing panther claws with eagle beacon , most unseen combinations it was materialising herself with... most of the times it did not last more than some 10 minutes one mix... but this dripping hairy curly orangy fleshly leaf offering maima kept real for hours, as ascende

was so deeply addicted to this cannabis essential being... himself adapting maimas talents and abilities while sharing touch and both penetrating it as well as asking maima telepathicly to enter into his anal and oral openings to deliver the thc delicacy from its orange hairs=0D=0A=0D=0Aperma came back from a short flight while ascende and maima went inside each other... she was watching

them for a long time with her main focus especially on ascende as he was mostly the male, she the female and maima the all it wanted to be part of their familywhen both ascende as well maima were climaxing for the 5th time, perma joined them ... witnessing in herself like a huge leap forward quite like a major upgrade ... as soon as she kissed ascende and savored his saliva tasting of

cannagoodness thcsweet and tangyrich flavour…=0D=0Amaima now being released from her passing knowledge to ascende... was orienting heir wishfullfilling activity towards perma. as she knew from their previous sexualcaressing times in the pool, perma would not want to stay long with the cannabis theme as she preferred other informations... like the seaweed swans appreciate

or the grass horses eat... so maima grew herself grass and seaweed body parts what she massaged permas inner mouth with, genttly pushed s seaweed knot into her rectum and several into her vagina, moving them around in concerto... perma was surrendering completly to this unexpected blessing in form of body opening massages... it tought her the insides of the grass plant being ... she saw

before her inner eye the life juices moving inside maimas now mostly grassseaweed body=0D=0Awhile her vulva anus mouth full of the seaweed knots and grass leaves... being moved gently... perma felt several waves of cummings... her body convulsing and remounting erupting with orgasmic fluids saliva vaginal secretions and anal gland fluid... it all being thankfully

swallowed and truly tasted analised by a maima what itself was learning a lot while being the pushing dominating sexpartner this timemaima developped from experience to experience ever grander mindsets ... fuelled with all their happy family cumming feelings, there were soon no limits for maima anymore... had she at first respected the human traumatas of all kinds forbidden and painfull

activities... maima soon was able to heal them all from ascende and permas memories... like ascende and perma still knew of the past having had the suffering trough abuse... but with maima s willing and enjoying bodytransformationthey both grew into the same kind of expanded mindset where all was good what broughtjoy to all particpiantsimage mixing of cannabis orange hair with

anus vagina mouthascende perma maima family merges into one body mary what levitates and can change its fabric from carbonbased into ammoniakbased and all gaseous icy fire elemental statesÔøΩ.at home now i find beautifull pictures of orange haired cannabis buds https://www.flickr.com/phot content/uploads/tdomf/1123 content/uploads/tdomf/1123

4.jphttp://but am both reluctant to use this copyrighted material as textures for maima in the pool fullfillingascende cannabis bud interspecies sex exchange and learning does not matter as the idea is described clearly and meanwhile the story has alllready progessed

into the area where mary descends ÔøΩ a name what is highly regarded by the author asmother of god ÔøΩ i am so happy to think about mary as the ascende perma maima family merging into one physical being what not only has animal plant human abilities but also can changeits fabric and gasous density ÔøΩ so to say, when mary is with them, they are no more planet bound but can travel

anywhere in the cosmos, adjusting their system to the outside conditions5 their three bodies growing into one while listening to the cosmic wandering experiences of mary...fifth text https://archive.org/stream/h it is this stage of evolution now where ascende and perma have learned most from their offspring maima. a level where ascende and perma became adept at designing their bodies

according to each others desires, drawing from the genes of many species they encountered both in the pool area and while flying at the sea, the mountains, the plains. some days the three flew together, at other times each on his/her/its own. as they were ever progressing with their transcendental cummings inside eachother and there was more fine touching and stroking now what allowed

the union... in such a quite and relaxed moment the three of them quite lazyhappy feeling each other, a new sensation arrived at them... it felt like they were on the way to completly merge into one body. this was the moment where the motherly mary spirit came down into their collective... bringing with her the cosmic travel ability... the four of them sharing one body with experiencing ecstasis on a

steady level. for ascende and perma this was quite new... to merge fully. they have experienced some of it with maima what is able to completly redesing its body very quickly and for example can form as many swelling muscles as it desires or senses the fellow companions wishing for ...and she can give them all sizes and volumes...human beings have swelling muscles in the penis and the labias of

the vagina what are filled with blood when sexual arousal hits home2but still,this now was new. a union of individual beings no more feeling the boundaries of one s skin ... but feeling all of what the fellow ones feel... what was in these days mostly a mild lukewarm contempt in their families success. how far they got, their understanding and compassion for each other such inclusive and

embracing that the mother of god even joins them.mother of god mary... but not only, as there are a number of human beings called mary... but me the cosmic observer was raised in catholic belief where mother mary is cherished and worshipped... and still today when me too same as the figures ascende perma maima i am writing about... i have transcended being a

member or follower of this or that single one particular mind/emotion/bodymanifest ... there can be many... i still ask mother mary for help and guidance... with knowing this, the reader might understand that i introduce the name mary here as well as in the parallel timeline alternative dimension of this fantastic utopian ascende,perma and mary the lifeship...but i must not let this autobiographic sidetour get

too big as not to bore the reader.since the first arrival of mary in their midst, the three were able to join up in this smooth and fine manner multiple times and allways the lust for sexual intercourse, the pleasures of feeling rubbing each others tight and prallgefuellten openings and swellingmuscles... this pleasure what was till some days ago the main focal point of ascende

perma a3and maima s physical exchanging of constantly upgrading dna .... this lustfull and with at tines orgasmic feelings transported research and upcycle of their bodies....this modus got instantly replaced with a much finer and softer, aetherical sharing of each others aura whenever mary descended into their pool... kind of... maima having lifted up the sex practices allready onto

most creative and imaginary excellent fantastic heights... with mary sharing her cosmic wisdom via the telepathic near field network in form of an invisible cloud above the pools... the family by both dna sharing and by choice were basking in the experiences of mary. her feeding images of unseen landscapes on remote planets into their telepathnet... with awe they were taking in these

at first strangly looking and feeling sights sounds smells and tactical informations4strange just the very first moment when the planet earth bound heritage was kind of defending its reasons to exist... but soon the multisensual impression of this far away worlds were leaving feelings of new things to learn and grow... wether it were ice planets or fire hot landscapes... how mother mary was

whollisticly sharing the full bandwith of how it is to live on these planets with a body what can adapt to all possible outer athmodpheric conditions5 mary s sharing were this interesting that no lust or sexual desires came up for many hours... like they were eager to cherish every single drop of the telepathic blessing mary motherly donned to the family. the weeks went by with them approximatly a

third of the time being in communion with mary and researching the physical bodies becoming one entity... they found out that at some times even their body parts where they were near each other or touched ... that there it automaticly seemed to grow together. frightened the first time they were, as it is one thing to feel another persons emotions or see a shared inner vision... but quite

something deeper seeing the physical boundaries of ones body merge with the body of ones neighbour6 their three bodies growing into one while listening to the cosmic wandering experiencesof mary... the first fear of loosing one s autonomy gave room to an assuring certainity... that they will learn to form spontaneous and created at will ... body communities with all fellow beings on this and all other planets in

all the galaxies... who were evolved to this same height. now that was a prospect, a promise for a future with both ultimate choice and abilities to intimatly connect on the soul levels ... 7 what happened from there, has its own difficulties in explaining...the sessions where the three became one and mary blessed them with her sharing all of herself what they were capable to absorb or

grasp... the sessions became gradually more like out of body travels... mostly ascende and perma noticing it while maima was still something ahaed if them two in evolution. for her there was not such a big difference between in or out of body as it was stretching her awareness into thousands of separate species at the same time where she drew genetic informations to upgrade her transforming skills.one

week they were at all the times grown physicly in the flesh and feathers and with their furs and flower buds... being nourished by the sunlight and the pool water what they absorbed trough skins mouths anuses and vaginas... they did still do some peeing into the pools while mostly laying in the shallow pool, or floating at other times with much rain. they stopped to excrete feces at the time when they felt

no more need to eat fruits and nuts.6 how about we start in our individual bodies and then come together in the air, perhaps even fly that high where the atmosphere is thinning could be another motivation for our cell intelligence to react to the challenge presented by the outer condsixth text https://ia902305.us.archive. travels on planet earth with marythe four of them are now familiar with each

other to a gradewhere they can spontaneusly grow physical flesh body connections to each other so to achieve sharing one bloodstreamwhen ascende, perma and maima were once again in the pool, being joined again trough mary spirit, they were experimenting with growing connection flesh tissues and researching the difference in the united bloodstream,how it affects

their feelings, thoughts, nerve sensations ...maima proposed to them that they could practise first on earthlearning to change from a dense flesh body to a gas like bodywhat can adapt easily to extreme temperature conditionsit suggested to train with the active vulcanoes on hawaimary was most happy with this proposalshe loves the planet especially with its beauty spotswhere the

earth is still creating its surface crust... the 30 miles mantle what are solid rocks and some meters of top soilascende and perma agreed to this plan and soon afterwards theywondered wether to stay connected physically for the journey or the separate as to every shaping into their favorite flying costumesascende said√¢,Ç¨¬¶ how about we start in our individual bodies and then come

together in theair, perhaps even fly that high where the atmosphere is thinning √¢‚Ç¨¬¶ could be anothermotivation for our cell intelligence to react to the challenge presented by the outer conditionsperma √¢‚Ç¨¬¶ yes, let us do that, this way we will also experience at how far our individual bodies will manage the extreme cold what is up there. of course you maima will have not much of difficulties as you

have learnt and inbuilt allmost all of the animal and plant knowledge on this planet, from the bacterias what live below zero degrees temperatures to the organisms what live near superheated natural water thermesmaima√¢,Ç¨¬¶ yes, i am so lucky that i could evolve that quickly, unlike the typical human offspring what most of the times inherits the damages of their parent generation, i

was born not as a humanbut as allready a true mixed being with equal plant, animal, human gene sharesyou both have enabled my progress trough your own alchemical achievements spending yearsat the pool concentrating your energies onto each other, seeking the harmonies with the microalgae,the cannabis thc, the mushroom psylocibin √¢,Ç¨¬¶ thanks to you

having learnt to incorporate photosynthesisinto your skin cells, thanks to you having grown yourselves swan wings, horse legs, bat wings, cat tails √¢‚Ç¨¬¶thanks to you having given up your previous human identity and leaped forward into an all embracinginterspecies being √¢‚Ç¨¬¶ thanks to your advanced thinking i could come out of perma as white balls of

potentialand form myself from many partsascende √¢‚Ç¨¬¶ we were so amazed and in awe when seing you emerging in this not yet defined white ballsperma√¢‚Ç¨¬¶ i felt then so secure in our way of evolution, knowing deeply that we were right to leave the humanidentity behind and grow together with the animal and plant spheresmaima √¢‚Ç¨¬¶ and here we are now preparing to reach out high

into the stratosphere, challenging our body systemsif they may learn quickly enough, if our internal organisation will find the specific genetic data at the times wherewe will need to sustain our bodies without oxygen and without external heat addedthey were now in their individual bodies, standing around the pool√¢,Ç¨¬¶ perma with her horse legs and tail, swan wings, human torso

and head, with seaweed hairs on it. her breasts were loosly covered with tiny green and purple grass stems.ascende was in this moment tweaking his bat wings where he mixed some purple cabbage tissue in, his human head and torso being similar to perma enriched with here and there a single orangy haired cannabis flower bud, enabling him to smellthe thc liquids

abundantlly √¢‚Äì¨¬¶ as he learnt the cat genetics from allready having a cat tail, he now grew himself some big catlegs like the ones from a jaguar with the one major change where he designed the paws with again some sweet thc smelling cannabuds √¢‚Äì¨¬¶ oh what acannabis lover this ascende isall the while maima going back into her first stages of existance, being a white ball, being

reminded by ascende and perma about her birth scenario √¢‚Äì¨¬¶ but now she was not solid and thick in substance but rather like a cloud, a kind of cloud what one would see after a hot day in the early evening, tower shaped and glowingfrom intensityit connecting her birth stage with their next task, to fly near the stratosphere, while once again impressing her parent generation how quickly

their offspring wasable to transcende all species boundries and limitations, with maima again going ahead showing them that phase change from dense flesh to gas state is wellwithin their reachsince the three were so successfully adventuring out into new genetic combinations, rapidly learing from each other and the times whenmary joined their com unions √¢,Ç¨¬¶ their mental

exchanges with mostly imaginary sceneries of all they set their focus on √¢,Ç¨¬¶. mary was occasionally sending them some additional informations in form of symbols and most beautifull drawingsso they were flying up in the the air, ascending steadily, not in a hurry but being fired on trough the supporting imaginaries coming from marythey were telling them about the inner workings of

the suns √¢,Ç¨¬¶ what was new to them all, even to maimabeing fascinated and fuelled energeticly with this sun insights, they did not notice the air getting thinner as higher they flewinside ascende and perma the lungs and other inner organs were responding to this images and blueprint instructions from the sun realmsas i, the author of this fantasies as well as eventually one past self of the future

ascende, am a bit at a loss of words how exactly this inner organs did adapt from their previous dependency on oxygen to a state where the photosynthetic skin cells could provide all nutritient trough the incoming sunlight √¢,Ç¨¬¶ actually, not all of it..some of their lifesupport came from exactly this mental insights from the suns, somehow ascende and perma were able to adapt these

informations and ignite theirinner spark to a powerfull atomic fusion reactor with moderate temperaturesalso maima now was glowing strongly with sunlike rays shining from its still cloud styled bodybut it became more denser in the centerall three of them, being coached by mary with her mental support blueprint images, were now forming in the middle of their bodies a little sun what

was creating a kind of auric field around their wings and legs and tailsone could say the sun inside them being that strong that it needed no physical movements for them move √¢,Ç¨¬¶ move now not really higher into the stratosphere, but more slightly descending toward their hawai goalthey were cheering inside, now so totally confident that they would learn how to meet the lava, the flowing rocks

bath of firewhat hindrance could their be after they had learnt to free themselves from the perceived need to eat other beings √¢‚Ç¨¬¶ what challenge could be more demanding thantransforming from an oxygen rich air breathing being into an entity what could propel itself in near vacuum with the power of an activated inner miniature sun fusion reactorto celebrate their

success, they were cuddling near each other in this heights, feeling the inner suns of each other reaching out trough the skins, tickling the fellows nicely √¢‚Ç¨¬¶ and they did not need to grow flesh connection tissues anymore, the connection was now their suns shining at each other √¢‚Ç¨¬¶ what wonder7 when maima noticed both perma and ascende having learnt how to become a blue flame, it

goes further in its play and dissolves all the cannabis mushroom animal body part shapes and forms itself into a one meter ball of deep frozen iceseventh texthttps://archive.org/strea to have trust into cells memoryperma ... i believe now that we have ignited our inner suns what warm us and replace the need for oxygen .... tested in the stratosphere... we will be fine with the lava in hawaiiascende... like we

have seen with maima, we might be bold and give up our human and animal shape skin and flesh for a moment when we assimilate to the lavamaima... i can not totally tell you how i change from white thick balls emerging from perma to the cloud like gaseous smoke balls... but i feel that if you just trust in your substance, in your cells that they will be able to form whatever shape with

whatever tissue you desire to cloth your spirit in...mary continues here with a picture of them being in the stratosphere, like with a heat sensitive camera... and seeing themselves being suffused trough all their veines with golden light what the before red blood was...ascende and perma were enjoying this mental words and pictures exchange as they were a bit mildly panicking when they thought about their

descend into the vulcanoes of hawaiiwhat will happen to my bat and cabbage wings... will the photosynthetic skin cells not suffer from the direct contact to fire...when maima comes into their view playing with her body forming hundreds of balls of fire flameswith perma sending... my dear, you are such a blessing for uswhile we worry about our prized achievements and posessions to last, you

show us how to let go and recreatemaima being happy to receive such smoothisch words and as if to show how easy it all is, maima unites her hundreds of flames into 3 blue flamed trees of 3 meter height with all kind of mushroom cannabis flowers seaweed swan wings horse leg branches ….ascende allways gets enchanted with seeing cannabis shapes and spontaneously forms

himself same shapes like maima, with perma following up on them both... and quickly both perma and ascende get it into their system, the knowledge how strong heat with blue flames can burn outside of their humanimalplant tissues and not consume its substance ....the key here is that the wish to be similar like the neighbouring being is opening up all possible

access to memory databases ... and allows the wishing individual to override eventual fears and limitations ‚Ä¶ the wish is fuelled by emotions and spontaneous imaginary sometimes ‚Ä¶so in this moment when ascende wished himself into a similar shapes maima is wearing at this time‚Ä¶ she basicly mixing it all together what she saw in ascende and permas features ‚Ä¶ his love

emotions towards maima help greatly for this major step,Ã¶ becoming a flame with substance inside what does not consume itselfwhen maima noticed both perma and ascende having learnt how to become a blue flame, it goes further in its play and dissolves all the cannabis mushroom animal body part shapes and forms itself into a one meter ball of deep frozen icethey all still descending and are

seeing now allready the shape of the islands where they planned to do some further trainings with their very body substances, density and temperature levelsafter they reached the vulcano and maima was still in the form of a solid massive ice ball hovering above the heat radiating lava ‚Ä¶ ascende and perma were experimenting with their shapes, smaller bigger the wings and legs, torsos ‚Ä¶

still remaining with the basic features what they were develloping themselves with as basic costumes,Ä¶ but then, perma suddenly dissolves all her human and animal and seaweed and all of it so she is similar to maima, with the one difference that she is a frozen cone of ice hoovering beside maima and above the vulcano ,Ä¶ when ascende sees perma thiswise following maima he too steps into the ice

block shape, him forming a flat triangle ,Ä¶the three stay like this for quite some time,Ä¶ exchanging to each other the new sensations of being an iceblock what is not melting despite such a heat underneaththeir exchanges were not quite words nor images, but more like very slow and peacefull pulses, smallest vibrations ,Ä¶ they did not understood quite how this was possible, how their ice

substance was not being consumed by the surrounding heatthey assumed that the sun core in their midst was able to generate continuous amounts of cooling energyand then they flew into the waves of the ocean, changing their ice substance with the seawater, becoming more like jellyfishes and dolphins andall kinds of structures they could see in animals and plants inhabiting this

hawaiian coastsoh that is wonderfull ‚Ä¶ ascende beaming ‚Ä¶ we have gone trough hot and cold, changed from blue flame into iceblocks and can mingle now with all the ocean creatures without harming them because of being too differentmaima‚Ä¶ i believe that inhere lives a great force ‚Ä¶ within the desire to please the neighbouring beings, to be similar to them as to comfort them,

to fulfill their wishes how they want to be by incorporating this wishes into one s own bodyperma ‚Ä¶ i began to understand that when seeing your shape and substance changes, you have tought us well maimamaima ‚Ä¶ with me being tought even more by the spirit of mary what is sharing with us the knowledge she has gathered on her cosmic journeysthey bathed some time and perma and

ascende did feel occasionally the curiosity to change back into their previously human forms, what they achieved without effortsas it was such a joyous play to change substances and shapes, they did spend some weeks in hawai, also in the forest jungles and desert like areas, being jungle fog and desert sand, and soon there was not much what maima was having the both previously human did

not knew how to have or be too ‚Ä¶it was a happy time and they all felt as if they had arrived home nowfeeling welcome home in a body what can be all what it wants to be8 all things must come to an end... but actually not really an end it is but merely a new beginning2. August 2014 16:36:31 MESZall things must come to an end...but actually not really an end it is but merely a new beginningso... when

ascende and perma have learnt nearly all of what maima was showing them their humanimalplant genes were able to be and more... as they were accessing the elemental realms too... when they felt to have played enough on hawai, none of them really felt like entering into space to travel between the starsone might ask ...why, if they now have the abilities to travel on space without machinery, without

being dependent on any outside mechanical things... why would they stay on this rock called earth ? when there were so many people longing to leave this planet in metal built privatly owned spaceships ?perma.... mmmh, i believe that this wish to leave the planet, what we receive sometimes very strongly, does not come out of a free choice like the one we have now after having

evolved to our bodies being spaceships itself... most of the people wanting to leave this planet love earth and its nature, but they are deeply frustrated and hopeless because of the many societal catastrophies happening right now...ascende ... like ... whole animal species being wiped out because of them being used as medicine, or their habitat being destroyed for some gramms of gold... gold

what wanders down into the faults of banks where the only service it is allowed to perform is to back up some paper money...maima... i was so lucky to have not being directly confronted with these global humanity problems beforealtough i felt these issues waiting inside you both to come out and some times while travelling the earth i felt the tragedy of the planet being overused and exploited...

my focus was on joy and learn how to tune my abilities ever furtheri much thank you perma and ascende for sheltering me from this most depressing realities untill nowand i feel that it is the exact right time for us to dedicate our mental and emotional focus on the healing of the planet and all species what are struggling to surviveascende... yes maima our beloved and guiding offspringing one,

we have been given this time of alchemy and magic, a time of concentration on ourselves and all what we want to achieve and be ... perhaps also in order ... with the cosmic intelligence protecting us from the cries of despair and requests to save the ecologic balance... with the creating allunited and uniting one force saving us for a time like this when we have ascended individually

in our little family to a souvereignity this firm and solid... that we might take on some of the waiting tasks now from a whollistic point of view...perma sends here an image into their round of the three of them flying over deserts and fertilising the barren ground with their joyfull intermingeling with ascende creating an image what shows them forming an animal approaching the huntersand speaking to

them, inviting them to receive the blessing of the three united in one body... and the hunter being kissed and caressed by the three in the form of the usual prey of him... the hunter crying from relief that he does not need to hunt and kill anymore ... as he has learnt while being kissed and cuddled, that there is a greater hunt and achievements to be followed ... the hunt for adding other beings

abilities to ones very own arsenal of genes trough joyfull and sexual intimate contactand maima drawing an even bigger scenario, showing perma and ascende a little movie how the vibrations of the healings experienced by this one hunterattract others who are searching for bettering their lives ... so they come to hundreds gathering in this newly greened deserts perma showed... and in these

grounds the human beings merge together most pleasantly in the same ways like ascende perma and maima practised in their times at the pools ... fumbling licking slurping each others sexy semen vaginal juices... reaching within each others mouths vaginas anusses to inseminate impegrenate the seeds of hope and change and evolutionascende perma and maima were shaping

themselves in a sweet mushy horny smelling mist what embraced the continuosly growing orgy in the awakened desert... the very substance of maima perma and ascende wetting all the bodies and entering them while all the fucking sucking licking slurping fondling went on in this orgy, the woman and men who arrived now by the thousands every day and reached hundreds of thousands within a

month... the people were learning most quickly all of the abilities what perma maima and ascende have learnt in years at the poolsone could think that it is because the three of them entering all the lovers bloodstream via themselves being the mushy mist covering all of the orrgy... what is mostly what happened... but to look at it from the mental level... the human beings what have seen in the

televisioned news about vast areas of deserts being greened over night and many people gathering in a lovefest there... they were so happy to have found this moment in time and space ... and their thankfullness was the portal where the mushy sweet substance of ascende perma maima s very own bodies ... could enter to the very roots of their pain and sorrow ladden cellsit was only

days after the lovefest started when the animal and plant enhancement features were showing in the orgy participiants ... them having lost all sense of identity and ego, status in society... them being drunken high and berauscht from all the sex and smells of the fellow human orgy partners as well but even more by the misty mushy fog what was ascendepermamaima...
their brains were mostly

not forming thoughts or following concepts of what to be or what to do.... the insticts were stronger, the desires of entering that hole and this and that one over there... with ones penis tongue and finger... licking that ass and this vagina, swallowing this penis what is just now leaving a vagina covered with juice of life...all these hornyness and plentyfull variations of intercoursing with each other brought

out the body part forming abilities spontaneously... so here one men was growing his penis to the size of an elephant one... being followed by a woman lusting after this massive shaft to cover it with a fitting vagina what allowed her to grow her pelvis middle body part to a size big enough she could comfortably sit on the elephant like penis ... all the while them both not being astonished or afraid

or scared but surrendering fully into the fuck of this momentwhile at the little lakes what were now growing inside the notanymoredesert... in the lakes the fuckers and suckers were discovering how they could stay under water for hours ... ascendemaimaperma substances being in the lakes too... and the lovefestival celebraters ... with time passing and some of the people being

here now for weeks nonstop... without eating anything except for each others sperm and vaginal juices... as well as being sustained by ascendepermamaima droplets... some of them were awakening out of the fuck trance... forming their arms into wings and flying up above the green plants and pink naked flesh covered loveorgy place what covers now at around fifteen hundred

squaremiles with human participiants counting now around a million men and womanthis film what maima is actually showing to perma and ascende... did become reality while them three watching maimas vision... them meeting the hunter first to heal him with intimacy, then taking him with into the deserts where their essence wetted the grounds and their lovefest with the ex-hunter now

learning lover started to send ripples on the planets news networksit is now a month after they started this dream... meanwhile three hundred thousands of the lovefest partipiciants have evolved to the stage where they can form their body parts female or male choosing from the same range of animal and plant genetics what ascendepermamaima have... all sorts of wings and tails being mixable

with mushroom penises and cannabis flowering vaginas of any imaginable sizes and shapes.these three hundred thousand were now leaving the place what brought them this immense freedom, they did still have to drink from each others sexually joyfully produced liquids... but some of them now were on the trail of how to merge with each other and with all fellow creatures... not necessarily in sexual

ways... they worked on it while flying away from the original lovefest areawhile them threehundred thousand now leaving there were ten thousands arriving each day... the leaving and arriving crowds gradually acceleratingwhile this upward curve of more individuals passing trough this nonstop orgastic joyfullfillment bursting spiral of a planet healing lovefest was accelerating the ones who left were not

too short of knowing what ascendepermamaima knew before they went into stratosphere...they discovered the growing of body connecting flesh tissue while they were resting on the ground in between their fligthsabout fifty thousand now flying humanimalplant trough sex evolved beings were spontaneously ascending higher and higher in one flight towards an other desert area... their motive

being to allow people from other continents to reach the lovefest easierthis fiftythousand then discovered how to ignite their inner suns and how to warm themselves in most chilling surroundings... this discovery then being samewise accidently or unintended followed by some members of the flying lovefest playing around with their substances becoming cloud like... what was then

the main accelerating factor ... can one imagine fiftythousand human beings what learned how to rebuild their bodies ... spreading out their very body substance onto hundreds of square miles of deserts.... the desert they chose was the one in utah... (the one where ascendepermamaima fertilised themselves into being the sahara one) ... can one imagine the desert of utah blossoming with

the very life juices of fiftythousand flying evolved humanimalplant beings... and short after the area has been greened they partly remained in tree animal lake bodies while this time the incoming spring of visitors was the most massivethe saturation of awareness in all the ground and plants and now formed lakes was that high that as an effect the visitors of this utah lovefest did not need even

sexual intercourse to evolve but simply to bath in the lakes to watch the humanimalplant beings metamorph constantly while breathing the air what too was highly thickly filled with evolvessence... but of course no visitor could leave on its clothes, it was simply absurd to stay clothed when being in that new paradisemaylovehealhttps:/ is the eight text of a series where i explore ascende

being totally notech but only working with body and fluids and sex and union and wishcraft in the sense of ... i want to be that ... and not giving up spending time with lovers and in a most ideal space ... untill this evolution goal in ones own body is achieved... no news no contact to other people not sharing the alchemical quest ... no charity and no community service ... untill that moment when one has

climed up to the highest step of the ladder what a human being can achieve on this planet earth using only juices given with pleasurethe seventh text leading to this eight one isathttps://archive.org/strea i am explaining at the site where i wrote ... i think i wrote about an hour on my iphone in notes, getting higher and higher... when i had to make it a stop for i needed to go to a shop buying tomatoes ... oh boy

was i high from my writing ... without the wild river, without smoking, just being struck by inspiration left me as high as anything after writing feverishly one hour, i am so thankfull for being able to channel this kind of fantasies. like i said once, i am channeling my future self ... that i can imagine this kind of situations and scenarios makes me proud of myself... like ... i feel that these moments are for

what i have been preparing myself----------my goal today was to again go to the wild river sense to bath and dance ... but guess how far i came, not even half the way and i was so overwhelmed with creation forces what to write in the next progression of my ascende notech line... it started with the comparisation from the original writing ascende, perma, maima and mary the lifeship at

http://www.bookrix.com/_eb andreas-buechel-as.../ to this line i am now in ... and i believe that this line now is the better one in comparisation as it is very strictly setting the evolution progress on individual training first and community sharing later ... my thinking today then on the bike was like ... where would one being go when all goals of selfullfillment are being reached at this moment ... naturally it

goes back to the greater community ... so that is how ascende perma and maima with asisstance from mary are now in this eight text of the ascende notech line sharing their evolution achievements in a bit quick manner with millions of other human beings ... them of course no more humans ...ascende and perma are now ex-human beings and really also ex-humanimalplants with what

maima was born ... now all three of them have gone to blue flame and ice state of living so they could be called eventualy elementalenabled incorporated ones10 ascende maima perma sliming the deserthttps://archive.org/de really should not be a big thing how many purely humans were keeping their line of genes and not in the same line evolving as the elehumans therefore can

be a multitude of totally different scenarios what happend in 2020 to 2040 this one line we followed in this writing till now was 2020 ascende and maima meeting at the wild river pools 2025 the saharan lovefest may we think of an again alternative line departing from 2025 after the saharan lovefest.... as ascende maima and perma were spending their substance into the desert sands over and over

again... they formed many root relationships what is eventually sensual till erotic as they were kind of fluidly kissing fondling and mixing each others fluid bodies while moving trough the desert sands... leaving behind seeds what were soaked wetted with ascendemaimaperma slime... sometimes they came out of the sand and errected their still slimy fluid with a mix of animal and plant fleshyness in the

water... ascende was like purple cabbage coloured and maima was greenish with little yellow knobs what had orange hair on them... it still attracting ascende with his cannabis preference perma was growing herselves some white swan feathery extensions and some other horse mane and tails... she caressed maima with her feathers and manes tails at all its greenyelloworangy bits ascende extending

now some soft thin fingers with what he was stroking maima and perma at the same time they enjoyed his soft touchings for quite a while at one moment they both formed holes in their bodies with ascende this invitation not missing to notice perma and maima were concentrating now their blood like slime around their newly created openings... following the old swelling body design what some animals shared

with humans... automaticly ascende was now gathering his slimeblood into two of his fingers what became now stiffer and harder with the hot fluids pressing inside he penetrated maima and perma slowly then stronger with them moaning for more in slime vibration waves of satisfying chemical transmitters push deeper... rub my hole with your prick... make my swollen blood vessels

rejoice lustily with your stick massaging entering leaving me .... was maima sending neurochemicly trough to ascendes him sending to it ... oh how your hole is embracing me and the walls of your inside channels pump me squize my drops out of me... will you receive my load of white essence... yes please deliver your most refined juice to me too ... perma now sending ...she before enjoying ascendes

penislike prall gefuellt filled finger what was slowly moving quitly little bits in and out of her... another part of her attention in her manes and tails finely peitsching ascendes parts what were not burried inside maima it being juicing over and over as a response to ascendes thrusting her firm tight nerve gathering hole and silently crying out loud in stakkato with each fast and hard push ... joy cries

...
ah..ah..ah...more...ya...dee ...push.... what turned ascende on such he came in simultaneous explosions of his both swollen red extensions inside perma and maima.... mmmmhh...schmatzten die beiden loecher... both holes sucking the load with enjoying noises ... digesting it in this moment causing their both bodies to send out scents into the desert where many flowers

and plants were growing quickly since their arrival12 is fuedeli fescht, aes faescht im fuedlihttps://archive.org/det their slimy loveplay and ascende ejaculating both in maima and perma... perma was asking ascende... i wonder what it is that we both are your holes expecting your seed to impregnate us... when maima says... oh this is millenia of male female behaviour and ascende

has still alot of catching up to do with his male side... that i understand... perma says softly, and me i feel quite okay receiving at this time, but to tell you both, i too would like to deliver my dna specialities with a white hot load of shooted sperm mmmh.... maima says, i am looking forward to embrace your swollen extension into my womb... with ascende now sending ... and me, i will to create myself a vagina what will

make you feel at home...how invitingly your both offers what i will gladly take up when time is ready for that so they were ending their first loveplay after arrival in sahara with the research of sex role behaviours meanwhile the sahara began to bloom starting with the lovers slime soaked parts the three kept themselves together so their power to fertilize more greater areas would be strong but each

time they climaxed orgasmotopian some of their substance stayed in that ground where they found joy inside each other this substance was then its own being what began to evolve and organise and exercise its abilities in its own souvereignity maima... these are our descendants ... or babies... how wonderfull we can grow our family perma... and i believe that they are at a higher

intelligence and capabilities even than when you built yourself with the aid of the white balls substance what came out of me.... your birth maima was after me and ascende had become humanimalplants ascende ... now that we are three elemental enhanced humanimalplants... what powers might our children have... them all watching in awe how at the space where they just had celebrated the sperm

uptake... where so much plants and animals were populating it... perma... maima have you got any idea, how you and me participate with this life enabling birth ? when it says ... you have still your female eggs in you from the time you was fucking with ascende in the pools... i mean, as ascende has still his seed producing balls you have the egg hatching mechanism keept active in your now

enhanced body... so every time when you got deeply touched by an emotion thought or with some seeds sent to your eggs waiting in their nest inside your mostly humanimal womb... you did soak up the information what pleased and made you feel good at home... perma now, glowing of pride in her motherly abilities... and my eggs impregnated with all the joy from being inside connected with you both

ascende and maima.... these eggs have we left there when we moved on for a next space to discover ourselves ascende ... oh that is so cool... kind of ... there is no more hatching to do, our babies now are this intelligent and sovereign that they take care of themselves at the moment the eggs leave perma mmmh... perma sends... i have not noticed them leaving me... when

happened that... maima sends...oh that was right at the moment when ascende spritzte shot of his load of semen into us... i noticed in you the eggs leaving you as soon as the information of ascende got in contact with them with perma asking... and you maima ... have also given befruchtete eggs into the sand what gets answered by ascende... i believe so, i felt trough my extension penetrating her how she

shuddered samewise as you when you gave out the fertilized eggs when maima says... yes i too have a mini egg factory working in me what i have copied from you as there is a strong wish in me to help fullfill ascendes wishes as the male of our group... not that he would be dominant, but his balls seed factory and expulsion joy force have a good drive for our project to fertilize this vast desert when

ascende asks maima... but you could have copied that too and become a male seeder too .... yes maima sends... but then as perma does not likes too much of her being penetrated too strongly, i felt that i could do that for us... hold my butt to you so you can give it to me hard isfuedelifescht mmmmhhh... oh i get horny again.... asende moans as he receives maimas signals perma

sending now... let me this time be the one who is ejaculating my load into your vagina ascende ... ya, he sends ... i will copy your egg preparing mechanism and send out the eggs fertilized by you both maima and permas delivering your hot white seeds in me13 saharandesertbornelementa the first generation of elemental enhanced humanimalplant beings born from maimas and

permas eggs in the saharan desert ascende perma and maima were resting from their slimy loveplay discussing their male female reproduction organs and how their psychological states of minds were influencing the next generation of elemental enhanced humanimalplant beings... trough their mating behaviour... preferences of how one likes to be and go inside a fellow being...

giving or receiving or any active passive combination of body forming exercises... but wait ... they have not yet discussed into detail ther imprint on the behaviour of the next generation... maima.. for me it is the first time watching a descendant generation, i am so happy to see them being sovereign from the moment they left mine and permas body... perma... yes i remember me and

ascende being in the pool i gave birth to you as white balls ... we were leaving the pool then so that you could have enough playspace to discover yourselves and what you wanted to be ascende... but still... i rember... us projecting our wishes too onto maima, while we lay beside the pool and occasionaly touching caressing maima in a nonsexual but tender supporting way maima...

now you bring up these times i find in myself notions of me at this first hours of me being spread over a collective of dozens of white balls ... receiving your wishes while your supporting arms in the pool were layed out to which i could go to when i was playing with the several balls i was born the organisation of the several white balls into a collective coordinated formshaping body was greatly helped by

that short moments i swam into your arms and got access to your soul informations of course the big part of essential humanimalplant informations were stored in me as egg from you perma with your sperm ascende having it fertilised your both informations being humanimalplants ones ... in the pool with the microalgae cannabis mushroom intelligences i was well informed too with

their psychadelic connections to the cosmic streams of life... but still it was a strong impulse touching you in my very first days of life ascende ... when you very quickly matured ... i saw my wishes well in you realized ... i was happy for that... and i thank you for helping me to fullfill this fantasy where you grew yourself into a body what had cannabis flower buds all over juicing thc while we

had a pleasent sexual intercourse perma... yes,that was maimas first sexual intercourse after it had formed itself into a female styled humanimalplant being... and we were surprised that your childhood was advancing so fast, with you maturing quickly at the time we stayed out of the pool offering at some times our arms to hold and nourish you emotionally and us too... ascende... as

we were at the times no more purely human beings but allready evolved into a mix of human animal and plant genetic makeup... we were only mildly surprised to see your childhood only lasting some days... in animal worlds are some species what are geschlechtsreif able to reproduce themselves in a very short time too maima... and now it looks like it is even shorter.... as we are watching the very

first generation of elemental enhanced born humanimalplants as they are continuing the wetting of the desert like we started it... i wonder how we want to see ourselves in relation to these our descendants... will we send them our fantasies too like you did to me ascende... with me being bytheway totally okay with your doings as i have picked them up willingly and was happy to engage

with you in our pleasurefull sexual plays after i matured to what the humans call adulthood perma... i was not sending my fantasies to you as i was content with the loveplays ascende and me have experienced in the pools together... but did not feel like you and ascende were doing something unhealthy together... as we three have evolved even further into elemental enhanced

humanimals and see this eggs having left us some hours ago allready growing themselves into palmtrees, being lakes and grass and flowers... snails and desert mouses i believe that they do not need our attention nor we need their vital power to fullfill our needs ascende... mmh ... sounds like i would have done a mistake when i was subcounciously sending out my cannabiscopulation fantasies to maima with

maima coming in between them ... what i have picked up being curious what fun and satisfaction your ascende desires could deliver to my own evolution we are not now discussing mistake or no mistake but what perma and me are trying to research in our round of three ... is... what could our possible direct interaction with this totally sovereign first born generation of elemental enhanced

humanimalplants be... ascende... sorry perma for thinking you would accuse me of being a bad rolemodel for a freshly matured being... perhaps there are some doubts in me from my time as a purely human being before i was meeting perma at the pools, when i was androgyneas .... perma, you are excused and forgiven allready as we have found in our round that maima was happy

having your fantasies as a possibility to engage with us what do you propose ... shall we leave them alone or are there any possibilities we could learn from them... maima... of course there are, imagine if we could have access to their genetic knowledge ... how our eggs and seeds again will becomer quicker to mature and even more sovereign in their actions to heal the planet... perma... yes right you are,

there is this vast task of the deserts being greened in order to give a place to all the refugees migrating the planet looking for a place where they can flourish without fear of being hurt ascende... i believe that this generation, these our descendants from our trio... will perhaps still have some of our human topics with them as we at their birth still were on the quest the search of male female

balance but that they are right busy working on the greening of the desert... let us watch some times and perhaps even mingle ourselves with them if they are searching contact with us... but let us also continue in our trio the task of me becoming the female sex and my switch from producing eggs while before was for a long time producing semen perma... so yes, we spend some time in our trio coming full

circle with maima and me growing testicles and seeding you... mmmh... i feel my schamlippen female genital lips allready coming together to form a kind of evolved penis... like the plant sarracenia oreophila... what is a fragile thing, not made for fucking wildly but to smoothly enter your vagina and anus my dear ascende and to deliver in you great amounts of my sweet honeysucklish essence

maima... where i will grow myself a thick meaty prick i will satisy your desires to be strongly pushed into, as you did to me so well donating me thisway much orgastic moments of being used thoroughly ohoh ladies ... ascende now sending.. or should i say horny stallions... you are causing my penis to fall apart in two halfs to form a vagina what will satisfy your most interesting offers of penetrating me...

perma... so here we are, allready fit and composed enough to engage again into loosing ourselves in each others embraces and sexual welldoings... maima... well i agree, we better get one with having you fucked properly in all holes, as you are allready getting your vagina built ... and my whale bulls inspired penis is also quite ready growing and i feel like filling someone with it completly... mymy maima

...perma jokingly ...what a bully you can be oh i see you drilling your massive thing into him... make sure you get it into his ass right up to his brain ... as this is a human imagination what only now becomes possible... we can put brains in our bodies wherever we like to place them ... we might even experiment with brain cells growing in a special layer under our swelling muscles ... when we could right

massage each others brains with brains....14 elehumans going techno14 elehumans going techno while ascende perma and maima were exercising themselves in the gender role model switches in order to balance out each ones male female equilibrium... the first born as elemental enhanced humanimalplant beings sahabornelehumans were preparing the saharan desert to be a home for all

the human and animals of this world who did not find themselves to be welcome and or treated with the respect a human as well as an animal being deserves the saharan elehumans were kind of everywhere so when some similar injustice was on its way to happen like it happened in the world sadly enough many times at many places ... perhaps most of the paining happenings not coming

from one really wanting to cause pain but out of an uncounciousness deficit one needs to fill... somewhere on ones way one got hurt and eventually one will transport this hurt onto someone else with or without knowing that one does so also an other reason for a deficit is a lack of flexibility in ones mental emotional and physical body... like thinking too much of a trouble or reliving the same

traumatic moments and sitting too much in a cramped body position... deficits can happen too in a situation where a strong wish of someone does get nearly enough realised in ones life... one being distracted from ones concentration of reaching a particular goal... distractions what eventually are caused by stuff what one would want not to be in ones life but they are probably showing

one where his/her service could be found to benefit the greater cosmic community of all beings knowing this because they have been purely humans too and they still can access the human mass counciousness... the saharan elehumans were sensitive to the newly arriving human and animal beings treating each other nice and respectfull they did not police the place like standing at the crossroads

watching everyone to walk in line... no, they could sense what the problem was somehow about and fill the gap with their capabilities to be any kind of substance lifeform shape object subject of possible existance ... so there was a saharan elehuman being serving a newly arrived small time thief or a merchant or basicly any character what has felt the need to posess more security in form of

money or trading goods... so when the sahabornelehumans sensed such a lack of abundance in a visitors life, they created the remedy from their own bodysubstance ...its bodies forming all the riches the person was longing for... mountains of gold, palaces of marble and what more one can imagine of luxurious splendour to posess... usually the newly arrived person did learn

quickly to let go of this riches given to him unconditionally ... noone took the gold with to go back to the cities of the purely humans... in the areas stimulated by the sahabornelehumans was no shortage of food and shelter most everyone was most of the time happy to occupy oneself creating all kinds of fantastic manifestations... with the saharan elehumans serving as the wizzard or

gene who formed something out of thin air ... what was actually like that partly as the elehumans have learnt to recycle the co2 as well as the nitrogen and more stuff the humans have emitted thanks to their inefficient burning of materials some of the purely humans visiting the stimulated greened desert places were bringing their animals with to discover in themselves after eating from the fruits and

vegetables of the stimulated places that they just as well could release the animals this food here was so nourishing and wholesome that they would need neither eggs nor milk nor meat anymore food being grown from elehumans was so strong because they were putting themselves into the trees from time to time to strenghten its growth also they lay themselves in fine mists of elehuman watery

substance over the vegetables in the mornings as to water and inform them of elehuman genetic immun system informations some purely humans stayed a week or a month, some years before they decided to join the elehumans with giving them either their word... yes i want to leave the purely human state and enter an evolutionairy broad road what leads to one becoming a being able

to be hot as a blue flame while having a core of an iceblock ... i wish to be a being what can form its body picking from all the genetic informations what are embodied on this planet or they could just offer the sahabornelehumans their semen or vaginal ejaculation fluids as a contribution to the community as well as a decision to mix with the elehumans beyond food

but to take up their semen and eggs too for example one purely human is curious and thinks why not try this elehuman thing, i have been purely human long enough... so one can imagine that there would be several ways to deliver and take on semen and vaginal ejaculation fluids... sucking it off the elehumans something some purely humans preferred, others imagined being a flower what sends

out its pollen with the wind and be fertilised by air transported pollen coming on oned fruchtstempel in fine mist the sahabornelehumans liked these scenarios as they were much further near the plant worlds in their genetic makup with a little animal and lots of elemental forces in them when then such a dreamer purely human closes its eyes and sees him/herself being a flower sending out

pollen and getting dusted with the ones from elehuman flowers, the sahaelehumans misted their bodies into such a dust them taking on a airy fairy low density for the finest purely humans ... while with others hanging onto their sex experiences before ... needed some rubbing of genitals with a dense cloud forming itself into fingers with swelling muscles behaviour pulsing like with blood ... what

made the densly caressed purely humans climax and ejaculate their male or female most inner juice... some of the purely humans did not want to change ... and went back to the cities telling others or not... but millions came and the television drones were now entering the zone, what was quite exciting for the sahaelehumans as the knew that there would be a chance to help the purely

humans with their technological progress why would the sahaelehumans want purely human machines to evolve... first because every progress in technology bears the possibility of more people being allowed to take leave of having to work a job they do not like ... and the sahaelehumans hoped that when the drones fly back to the purely humans cities for maintenance, their engineers will discover

their elehuman enhanced circuits and some files in the enhanced software operation systems what would explain in detail how materials could be created what are billion times more efficient in electricity conductance ... the new code languages within the camera electrobirds will enable their computers to grow their processing speeds samewhise a million times... as this code was so simple and going

the most fluent way ... the television networks had hundreds of drones flying constantly now over the saharan lovefest of 2020 and they noticed after only a couple of hours of the cameras sending via satelite broadband connections.... that the quality of the pictures was increasing by the minute.... like... they sent drones what could record and transmit 200 x 300 pixels in realtime... when it was

at 20 tousand x 30 thousand pixels within one hour and 20 million x 30 milliond 3 hour later .... delivered in completely new algorithms what could be delivered trough the network channels but not analysed... kind of the purely humans decoding the signals were not grasping the logics of this newly composed picure data.... that was when some of them decided to quit their jobs and visit the

lovefest to ask the elehumans if they would explain this new software to them... as obviously the improvements of the picture quality must have been a connection with something elehuman as they arriving at the saharan lovefest the elehumans were most happy to teach them... one method they offered that the programmers were relaxing their minds so that in a meditative state the

elehumans could send the code telepathicly, what they had written the drones new operation system this was happening on the subcouncious level at some purely human coders meditations while others saw the new coding language being explained by the elehumans in their dreams before their inner eye while relaxing their bodies in pools ... some programmers chose to become elehumans and

for them it was the quickest and easiest learning of vast new knowledge they had ever encountered... like the learned all the dna alife from billions of animal and plant species plus all the human stuff with on top of it all the very coreness of fire water earth and air... and this coders now elehuman coders were no more interested in disembling the drones to see what kind of new

hardware the elehumans have transformed the before purely human motherboards in they wanted now to build alive computers meaning flesh and plant tissue based blue flamehot icecold formed flying cameras.... so they invented with their own body substance again million of times more fluid and smoothly operating drones with a power consumption of miliwatts and an picture qualities of

new clarity and a broader visual spectrum broadness ... these cameras recording all kinds of waves like infrared and the aura of humans animals plants... they were human coders a half a day ago and now they were elehumans droning the skies with dozends of parts of them being the first truly organic alive robot cameras who could fly the next they did was multiplying their parts

gaining mass out of the infinite pool of cosmic energy and building satelites or organic drones what orbited around earth in the near space beyond the air belt atmosphere... with some organic drones flying into the purely human settlements transforming themselves on the way into tv sets displays of all kind of sizes they too multiplying and gaining mass around 100 000 of these displays were

arriving in the settlements placing themselves decently where it would not disturb purely humans ways and they did not only displayed what happend visually at the saharan lovefest as this was done by all the purely human drones but they opened the watchers a interactive experience the organic drones now displays too were also inviting to transmit informations via skin contact like... a purely

human what was discovering a tv set at a place outside near the settlement he lives could cuddle him/herself in the organic cameradisplay elehuman thingie like in a blanket and the elehuman blanket would touch the naked purely human learner in ways what were desired by the learners... some got horny while feeling the life fleshplant blanket cuddling and saw before their inner eye the

blanket entering their vagina and anus and rubbing ones penis others were just laying still in the blanket enjoying elehuman dreams told in all sensual ways.... sounds smells touch and taste with inner visuals some did not leave the elehuman blankets but chose to become elehuman too... this ones were then again inventing themselves anew to become all kinds of helper organic machines what

would offer the purely humans in their daily tasks some few days after the first cameradisplay then blankets landed in the cities, the number of converts begann to multiply most quickly... kind of half the people living in the big cities chose to be elehumans .... with nearly all of them dedicating their body designing powers to aid the other half of the population doing household

tasks and producing things within a week was no more food being produced the old way ... elehumans have shown the farmers their techniques to grow vegetable fruits and grains... and they could deliver a few thousand of kilograms what was enough the population of a 20 million city... now a 10 million city as the elehumans were not needing to eat a fruit or a vegetable also cars were

standing still some days after the elehuman visit in the purely human cities... nearly all of the purely humans were enjoying the elehumans serving as transport vehicles in all kinds of forms... from horses to bikes to carlike forms and velocity performance perhaps one could say that within a month after elehumans starting to serve with their bodies as machine replacements.... there was

noone on planet earth who was hungry or suffered from being without shelter with elehumans now in the numbers of billions and multiplying gaining mass consuming ever renweable cosmic energies... the old concepts of buying things scarcity and fight for survival lost its existance every purely human who was still wanting to eat and live in a house wear clothes etc was now enjoing elemental human

assistance with vast flying palaces ... where little rivers were flowing down 100 meter high minimountains within the ship... fruit orchards with vegetable mixed culture landscapes grains growing on stems between the vegetables , also mushrooms and cannabis plants... the temperature inside the alive elehuman flyships could be set as desired by the purely human passenger altough

the elehumans performed most of the wishes for the purely humans, they would not allow the purely human passengers to think that they would own these creations their ex-fellow human city inhabitants now elehumans have formed their very personal bodymass into so... life for all purely humans changed in contact with the elehuman machinery... there was no more work what was expected from

anyone nor any shortage of food or protection everyone now could stay at a place on earth feeling cosy in a 50 diameter big flying houseship or fly higher with a ship hundred times bigger in size15-creating an other timelinelet us leave the lovefest 2020 and travel back to create an other timeline about 2018 ascende and perma meet at the pools in these two years 2018-2020 while

they were evolving at the pools and flying around... the purely humans in the cities were researching a lot and with speed on machine intelligency robots were learning by themselves they too got into the dream of a living material what they called programmable matter the robots were in 2020 just about ready to do most of the tasks in society what previously required a lot of people, most of all

transportation got auto mated with self driving cars and trucks and planes they did approve of the overunity energy devices like LowEnergyNuclearReaction LENR and the SEARL device and made millions of copies of this phantastic technologies, replacing thisway all of the fossil oil or gas burning motors and heating systems the SEARL device was especially helpfull to make

the step from automated self driving cars to self driving spaceships so in 2020 people were seeing all this phantastic robot technology on the market perhaps 20 percent of the humans on the globe were able to buy these machines some months later, the first generations of the highly sophisticated airships, cars, android companions were sold.... the huge amount of money now released to the

producers were enabling them to sell better versions at a 10th of the price, thisway again allowing another 30 percent to participate in this automatisation surge.... while now half of the human population was quite autonomous with the machines driving flying them anywhere they wanted to be, perhaps having 10 robots working in ones greenhouse or wood carving workshop....

the other half of the people were helping themselves to participate in the end of salary slavery... plans of the devices plus some dissassembled devices too were being studied similar devices were built by half poor half rich people who had compassion with the poor their machines were sometimes even better the nation states were clever enough to keep themselves out as much as they could, some long

time state employees witnessing with great joy how society took the turn to solidarity when it became obvious that there would be no more need for police and military as a thick nourishing carpet of abundance was being rolled out in 2021... enabling everyone to live on its own ... picture everyone with a 50squaremeter flying ship what has food production inside greenhousestly...

the people everywhere on the planet were using less and less of the nation states infrastrucure with new politicians being elected now which did shut it all down to a minimum ... healthcare, learning, selfdefense, righteous behaviour in society... the people were helping each other directly spontaneously or regularily in myriad different ways they agreed to mutually no more taxes were asked as

the people everywhere on the planet shares their produces with great pleasure oftentimes the trading of self designed items of daily use made by the robots one has bought or was donated too... the trading itself was an adventure and very rewarding quest, so many possibilities to find trading goods with their unique producers with whom one could get in a unique relationship as to why one

would want exactly this custom item from this artist producer without great trouble the transition from the age of scarecity scarcit into age of abundance happened when ascende perma and maima were starting the saharan lovefest most human beings had found a vegan diet most comfortable for their life and many were happy with the world as it was, with free energy robots and

autonomous living and producing infrastrukture for all humans but then there still were about a billion people an eight of all what found themselves to be meant an evolving being and wanted to ascend a ladder higher by becoming humanimalplant elemental enhanced ones they left their autonomous ships and cars and robots and all this producing consuming transactions to join in with the saharan and following

lovefests they themselves wanted to be their plain of air with car ma and row the boat pro ducere to lead trough ... why would one want to make a hole in mother earth to take out metal ore to build a robot companion ... if one could learn to transform ones very own body into tools for transportation and fabricating things ... rowing ones own boat ... being ones own robot... by connecting to the full

genetic spectrum of all fellow life forms on this planet ... and how does the ability to do photosynthesis with ones own skin compare to a machine sitting beside oneself to extract energy from the cosmos to power ones robots... the robots needing to tend plants to be eaten... comparing to be this tomato to be this strawberry in parts of ones own body... potatohead with potato skin over ones

face... instead of growing them and cook them alive... of course the fruits fallen from trees and nuts and seeds are dormant what means they probably feel less pain when being grounded and cooked compared to a cabbage being behaeded on a field as there was no human being hungry or without shelter in 2020, people in general were satisfied with the achievements the human race has reached

with not killing each other anymore, the gift economy and everyone being autonomous with how one wanted to live a material life the 12 percent of humanity what has chosen at 2020 to become elehumans ... were finished with the material cycle posessions and trading and all they were longing for a next intensity of abundance... with access to all planetary life forms dna and being able

to redesign oneself with combining them any suitable way at any moment anew... this abundance is on a deeper level than the free energy machine, the elehuman reformation reforming powers are tapping into the same field of energy but just directly in ones own soft flesh body16- opening up an other possibilty in future events to happen with thinking about it16 opening up an other

possibilty in future events to happen with thinking about it... ascende maima and perma were now occupying themselves with researching their male - female balance as they saw their offspring the saharaborn elehumans... doing so well fertilizing the desert making a home for who looking for peacefull existing evolution... wether as a purely human or as an elehuman... we might have a peak into this

sexual plays of the three later as now there is a possibility of the do it yourself maker community becoming a leading force in preparing the advent of a marvellous future where machines and other living organic beings coexist in 2018 there were roboters available at a price of 500 money items with about 60 percent of the global human population being able to buy one... some had to save half a year for

it, others bought 3 with their savings they had allready reserved this humanoid robots had a sophisticated build what was inspired by a robot develloped by the eth zurich in 2013 ... there were mechanisms what worked like the human muscles and sehnen... built on top of it was a layer of tissue what was grown from the human cells donated by the person who wanted to

spend time with this particular robot the tissue also having skin like feautures the artificial intelligence of the metall and plastic brain processors allowed these robots to copy all the moves their human compagnon would show them… with the added possibility to design any combinations of actions what would be needed to perform in an event where the human compagnion

would not be available for demonstration of course there were at the beginning half the people training their robots taking them with during all the daily tasks beginning from preparing breakfast driving to work, doing the work, shopping ...to come home with the robot and leave him/her doing their own thinking and processing the daily input there was in 2018 about 10 000 really commited hardware

enthusiast on the planet what were thinkering around with the robots beginning the day they got them they were modifing the inside metall plastic parts, as well experimenting with new kind of tissues when they got news over the internet from a visitor of the saharan newly greened areas some thousands of this diy makers were preparing their visit to the saharan lovefest within a

week they read about it what possibilities might there be to learn from the elehumans as to improve the robots and they were wellcomed by the saharaborn elehumans, who were all for it to let the purely human technologie enter the area the makers were not only bringing their robot experiments with but also their 3d printers and human tissue growing bioreactor labs this especially was of interest

as they sensed that there, in the fluid area of flesh and muscles and bloodlike nutrition information transmitter fluids might lay the future of the robot hardware the sahara born elehumans were seing human technology for the first time, but they had the memories of their parent generation ascende maima perma ... partly... as not to be burdenend by the individual informations... so for them this was mostly

positive and exciting possibilities to transfer elehuman ness to eventually a next generation of planet settling robots they offered the makers that they may have some of their very cincentrated life substance and use it for their research... provided they would not willingly destroy the life part of them, but take greatest care with their experiments with many makers being very

gratefull to accept this donation of alive substance what could also take on any desired form and even talk... in the minds of the makers this was like having an elehuman organic robot what they could take home eventually to further learn its wisdom some of the makers never left the greened sahara again and became elehumans themselves with their machinery and lab equipment becoming

elehuman substance... others stayed there for several months before they went back into the cities to share the progress they achieved integrating elehuman substance with the purely human built hardware some positioned themselves just far enough outside of the lovefest where there was internet satelite connection was available .... in the greened sahara regions all human radio or satelite broadband

waves were not working ... and mail delivery for materials and maschine parts of other regions of the globe it was around 2022 when the makers who have been in the saharan greened areas were having achieved an enough sophisticated combination of elehuman substance and purely human built parts... that the saharan elehumans were agreeing to offer these new generation of

robots to the masses... not that it was not everyone who came to the lovefest could not take some alive elehuman substance with when visiting out of his/her curiosity or true search for evolution... but in 2022 the elehumans felt that this combination design now of plasticmetall parts with elehuman substance optimaly integrated, that these machines were sophisticated enough to have their blessing one

main reason for them to agree with the makers who prepared to release the complete design process of the last two years... not that it was not online all the time they worked on it.. but now it was all explained and enabled anyone with standard 3d printers at home to fabricate a robot themselves with them having both the possibility to go to the saharan greened areas where one elehuman would donate

some of its alive body substance as to be integrated into the purely human built hardware or one could send ones robot to the green sahara by others who offered this transportation service the design of this robot now was this highly develloped that it would allow only beneficial acts to perform with the human built chips now very intuitivly connected to elehuman wisdom what cuddled them

trough the alive substance embracing all the plastic and metall parts in 2022 around one third of humans have become elehumans in the lovefests two third having elehuman enhanced robots what did all their chores and on top of it were being very ecologicly aware and gentle with all fellow creatures... while an elehuman substance enhanced robot would serve some raw tomatoes

it has grown for its purely human compagnion, it would not kill an animal being ... most of the purely humans these days were enjoying the delicious raw vegan food ... with only a few purely humans tending lifestock cows pigs etc to kill them themselves and eat them most of the animals being kept as pets and for human or pet consumption were given free leave these days when every human had

one or several robots as companions robots what were partly elemental enhanced humanimalplant substance these animals were joining the elehuman way via the elehenhanced androids wherever the animals what roamed around free met an enhanced robot in a time they did not serve the purely humans... the elrobots offered the instant evolution step by them giving some of their

substance to drink to the animals... only some drops where enough for the animals to gather with fellow animals of all races to celebrate their very own lovefests untill they reached a level where they met naturally with elehumans elehumans these days in 2022 were spread over all continents busy offering everyone services what would make life easier we are now counting around 4 billion

elehumans, 4 billion purely humans with around 20 billion partly elehuman enhanced machines and 30 billions of animals going the elemental enhancing road.. what makes it quite logical that the trend will be that more and more purely humans will convert to the elehuman path for example... some purely humans who had sex with their elehenhanced robots were converting just with them soaking up elehuman

substance during intercourse with the elehenhanced androids others were asexually contemplating their lives coming to conclusions what makes it selfish to continue using mother earths ressources and eat fruits and vegetables when there was an easy going flow to be this plants oneself and not be any more hungry after their vital data projecting this into the coming years...

again 3 of the 4 still purely humans converted in the years up to 2030 with all their machines and gadgets partly becoming mass they could use as elehuman substance kind of ... one day a purely human decides to go elehuman... the elehumanenhanced robot then offers to be eaten drunken partly with again only some few drops being enough for the process becoming initiated... within

minutes the body adapted to the informations stored in these few drops... and when complete after an hour or so... the newly convert has the choice to gain its mass with kind of eating the metalplastic parts of the robot there is still one billion purely humans left, most of them eating very modestly, doing most of the works themselves like gardening and housekeeping, cultivating vine, archery

and drawing pictures on paper... their elehenhanced robots do only a few tasks and enjoy most of their time in being with whomever they like.. visiting lovefests, traveling the globe...

3-l amour l amour ascende and perma in paris

andreas buechell amour l amour perma and ascende in pariskind of romantic modern day meeting of evolution furthering bio experimenting loversthank you all what is1-ascende and perma initiate crowdfunding for the

production of androids and lifeshipshttps://archive.org/c goal . . . perma writes in an email from her smartphone in her permaculture home to ascende in his city appartement. . . is to approach the eventually 2 billion people on the planet ascende chats back, i agree with you on the target audience... 2 billion people might have enough funds for the build of an android we migh have to

do some monthly contributions scheme, for example starting with 1000 ,Ç¨$¬£ and monthly 300 for a period of one year ascende... makes it 4600 ... half of what the cheapest small car costs now perma. . . it might not sound much, but we could profit from economy of scale. . . let us assume 500 million citizens of the world would participate.... makes a sum of 2500 billion ,Ç¨$¬£ collected

within one year i see .. ascende says... and it needs roughly a 100 billion to create sustainable fresh water supply for the 800 million people who have not today access to fresh water mmmmh ... perma says with a thoughtfull air... that might be a good idea, kind of as a reward, people could choose that 250 of their pledged 5000 would be used to first of all invest into bringing fresh water infrastructure of the

least financially whealty fellow citizens of this planet ascende... and parallel to the 100 billion investment to install fresh water machines . . . there are today machines being installed as a charity effort of major international commercial corporations what can filter used water and purify it into drinkable one while being powered by solar photovoltaic panels... so parallel to this 100 billion investment what

could be completed within the same year ...the building of android production facilities would happen. . . i guess that to build a fully automated android factory would require around one third of the total . . . around 800 billion perma ... so we would have left still 1500 billion to produce 500 million androids and ship them to their sponsors ascende... right you say sponsor and not owner...

as i believe an android with a selflearning artificial intelligence software would sooner or later come to the question... why do you think you own me . . . while i am doing all the work for you..altough you have helped to create your human children, you do not believe to own them. . . perma , yes, that would inevitably happen... so then is our approach of sponsor-talent relationship a more sustainable one

ascende . . . the android then who lives with me in my appartment, i will take it to work a hundred or more times to introduce it into the task it hopefully will take over from me, allowing myself to travel the globe to the nicest water and sunny places to dance sing bath surf while the android talent i sponsored into physical existence provides the income source for me having a relax and inner

developpment lifestyle perma... yes... it would do that as a thank you for you having helped to fund its physical build... but how long untill it thinks ... what about my inner devellopment, i too as an android might enjoy to dance and bath, as my artificial grown flesh like tissue too has nerves what can enjoy the touch of wild river water and the deep nurturing of swimming in the ocean waves

ascende... we would have to set up an agreement between human sponsor and android talent. . like ...10 years will the android do the chores its human sponsor requires it to do as of the stupid world economy not sharing its wealth right now . . . perma . . not all android talents might agree, some might find themselves thankfull to the human race to an extent where they say. . . i will not sign

any agreements requiring me to do this or that for a fixed time instead i will do anything for the human race what i can agree will help it reach the goal of inner as outer devellopment for example i could do your job for some years and in my other 16 hours devellop tools and machineries what would help my sponsor or in this case ... me its android talent friend... to quit working the money jobs

with ascende jumping in... yes, it could for example build a lifeship for me... with aero- and hydroponics on board, microalgae bioreactors and funghi growrooms... a 3d printer to build stuff to trade or itself making stuff from driftwood, chiseling it... perma. . . and my android sponsored talent will just work beside me as long as it feels like gardening permaculture wise will give him sensual emotional and

spiritual satisfaction as i like doing my permaculture gardening, my job is my road to a better higher develloped me perhaps some times i like to go bathing and dancing too the my android talent friend would look after the house and semiwild garden possibly... ascende says... that this way, within 3 to 5 years ... the 500 million sponsors would have a selfsustaining living situation thanks to the

lifeships built by their android talented friends... perma... and the android talents could go on staying with their sponsors out of fun and mutual emotional spiritual learning exchanges ascende... with them eventually keep on building lifeships to donate them to the other 7.5 billion what do not had the money to be a sponsor excellent vision. .perma says... we might think also of doing one reward in the

crowdfunding campaign what consists of the android talent being donated to a person in need of support ascende ... it might be possible that we can produce 600 million androids with the material we can buy for 1500 billion... perma. . . so we could ask the 100 million what are not going to their sponsors to further the cause of a free donation of an android talented friend to every human being if we

think of 100 million androids and some perhaps 100 billion money left of the initial 2500 billion crowdfund, they could eventually start constructing a fleet of lifeships what are producing fresh vegetables and fruits to be distributed for free to anyone on the globe suffering from a vitamin defficient diet ascende... i see a plant growing ship hovering in the air beside the village

and every one who wants can come to receive free food from the androids on board2-ascende and perma both liked to drawhttps://archive.org/deta their chat on the crowdfunding for androids the started drawing ascende took some inspiration from the human skelett with some additions from the animal world like fish gilles and bird wings perma added the artificial flesh with skin what had

photosynthesis capabilities as well colour changing like the chameleon in their next chat ascende started wondering how psylocibin mushroom and cannabis flowers would fit into this android formed after human animal plant features perma proposed to build the cannabis flowers into the head covering hair, beard and eyelashes while the mushrooms could grow in the pits under the arms to

draw the outer forms was quite easy for them perma used berries leaves and tree bark to draw either on paper or she just laid it out on the ground to send it to ascende as a photo taken with her smartphone ascende used photos from the internet what have been given for free reuse and worked with several filters and drawing on the computer and his smartphones as well as handheld game devices

with homebrew drawing programs on it the second phase was more diffult and it took both of them some months untill they were starting to learn about the inner visuals of flesh and cells perma chose the meditating way to see before her inner eye how the different microscopic pictures ascende sent her could be visualized into a collage a photo of a human skin cell melange with plant photosyntesis hull cells and

magnifications of the chameleons skin when ascende saw this drawings from perma showing her design what possibly a mix of several types osf skin cells could look like ascende decided that he would try to do some biological petri dish experiments using some own body cells and some plant tissue while leaving out the chameleon as he did not want to disturb a wild living chameleon he

was a vegan at this time and did not want any animal being captured, bred in captivity or hunted... he needed half a year to learn the techiques of biohacking ... when he finally was successfull in creating a mix between human cells and plant photosynthesis tissue perma saw in his microscope photos some structures she had drawn making her think of how possibly a wild living

creature would want to contribute living cells to build the biological life tissue for an android where she lived in the tropics she could easily go to a place where chameleons were there she meditated on her own drawings as well as on the photos ascende sent from his petridishes and one chameleon came to sit in her lap rubbing his body at her clothes while she was staying still passivly when the chameleon went

away, she carefully took the skin cells what the chameleon left on her skirt and bagged it to send it quickly to ascende he was so happy to hear perma telling him how she was so nicely donated with the living tissue he quickly studied in the internet how he could keep this chameleon skin cells alive and managed it in a special petridish when perma heard this, she proposed to come to paris

where ascende had his flat he had bought himself when he got donated 2 million ‚Ç¨¬£$ from an art conneisseur who thisway showed his appreciation for ascendes dance videos, novels and drawings he had produced during the last 15 years the art sponsor did not buy any rights or something, he was just happy to have found ascendes collection on an internet archive server these days he was

eagerly following the work of ascende and perma ascende had built an online presence where he posted all their drawings and chat protokoll regarding the android crowdfunding project with a forum where people could comment on each photo and videos of the living cell mixes or on the chat text or the phone audio files between ascende and perma when perma arrived in paris and came to ascendes flat

where he had installed all kinds of aeroponics and hydroponic plant growing some of his food also cannabis plants were coming well within his flat mushroom chambers and microalge bioreactors completed the rooms where the petri dishes of the android skin cell growing project took place as perma saw this, she said… this looks to me as if our android talents are being designed in nearly

this setting where we whish them to build it inside the lifeships ascende... basicly you are right on that while i have not yet counciously thought of the exact positions of what type of growing proces regarding to the other processes perma... how about we install video cameras here so we can show the people what follow our project 24 hours what happens in the petri dishes bioreactors

funghi rooms aeroponics ascende ... this way the counciousness of the supporters too can help to direct attention and mental lifeforce towards the processes we collectivly wish to help give birth too perma.. like i did with my meditation sitting at the place where chameleons live, the supporters can fill their computer screens, smartphones etc with a mix from live petri dish video feeds, our drawings

... and if they feel inspired to it, add their own sketches drawings both in a window javabox on their own screen... so they meditate design cocreate while part of their eye rests on the live petridishes ascende... where we hope we will find a lasting life sustaing cycle engaging itself so we ideally can continuously work with the same cell tissue donated by the chameleons, me and some stuff i took from

plants perma... you took it in a gently way ? ascende ... i tried, but i guess my relationship to plants in general is not as tender as it could be... i managed to eat less food and chew each bite till it is fluid in my mouth... but i still eat perhaps double the amount what i think would be necessary at my stage of mental evolution perma... perhaps we can lern here together, i too would like to intensify my

gratitude to the plants what offer their lifeforce to give me pleasure nurture and reconnection to the cosmic love ascende... my flat is big enough , i am very happy with you staying as long you dont miss your permaculture hut in the tropics perma... mmmhh ... i miss it allready but i see with our project that we have here a strong chance to keep this chameleon donated cells alive , i think i would like to

contribute my own body cells, eventually our bodies having met when i was at the chamelons living place to meditate... perhaps there is a chance of our souls helping us to carry the meeting energy from the tropics to pahs ascende.... brilliant, i like this ... and if the cell culture mix of yours with chameleon and mine with plant tissue... are both stable for a week or so ... perma jumping in... we

pack them in and bring them to my tropic hut where we set up shop, transmitting data to the net via satelit dish so they researched learned from each other, the petri dishes, the supporters what were now quite a few, while some of them botanists microbiologists biohackers etc some people asked when ascende and perma would start the crowdfunding that was a difficult question... at

what stage would it be wise to start the end phase with a time schedule till the androids could be delivered basicly, the crowdfunding for the produciom could start at that moment when all of the necessary biologic process were researched and a prototyp was functioning or ... more possibly., the actual growing of the prototype would perhaps need a seperate crowdfunding, as

the growing of bones and muscles connected to computer brains ... it all being complex as anything and needing eventually itself 5 billion,Ç¨¬£$ ... this then a research crowdfunding ... aiming at the 500 million people ascende and perma guessed could afford to pledge 4600 ,Ç¨¬£$ within one year for a working android talent friend .... these 500 million people could donate 10 ,Ç¨¬£$ to

get the 5 billion together eventually needed to complete the research within 5 years3-bio experimenting with petri dishes and bioreactorshttps://archive.o experimenting with petri dishes and bioreactors ascende used one of this kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had

tiny soft textile bands weighing only 3 gramms each into these bands were the sensors woven into what would allow the central data processing unit to know the exact position of all moving parts of the body he had also a full body suit wearing about 200 gramms what allowed himself to see his muscles and flesh in realtime the compter being woven into a poach one could wear anywhere on ones body

with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a watch for example. . . on his head he wore glasses what have been available since some times with them he made photographies and movies on all the experiments petri dishes bioreactor algae growing also sometimes he took a glass filled with water to see trough it.... in order to inform this water

in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part of his life not long after perma moved in with ascende in paris to make sure he would not waste the chameleon dna she so preciously got donated when she meditated at the chamaeleon forest not long and they were a romanticly sexually active couple she took him right into her mouth and sucked his

sperm off to digest . . . and he was worshipping her vulva ascende used one of this kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 gramms each into these bands were the sensors woven into what would allow the central data processing unit to know the exact

when he saw the 2cm2 of new cells being fusioned into his body happy on that success they went to bed to celebrate their reunions with the new cells the next morning ascende saw a perma what skin has blended in smothly with the white of the cushions and the windowsheets while himself noticing a warm nurturing sensation when he opens the curtains to let sunshine on his skin so... miraculously the properties

of the new cells have speed delivered their capabilities to the old cells of the whole human body an x-fold magnification of skin regrowing changing times5-ascende was ready for to go online in all of the rooms in his parisienne apartementascende was ready for to go online in all of the rooms in his parisienne apartementso was permathey considered it not as exhibitionism but as a contribution to helping

the human evolutionevolution in the sense of a being discovering the potential what lays in its genes plus to mix ones genes with other species to enhance ones own genetic treasurea treasure what only grows with sharingthe afternoon before the going live morningthey went out into the parcs of paris to see how their skins would act and react being surrounded by trees and

grass other people ...they both dressed lightly to expose their skin to the sun and the flowing airascende lay down on the grass as soon he got into the parc, he loved it so much to feel the grass holmes touching his belly and back, his armsit smelled of good soil and lifeperma did dance she moved using all kinds of animal typical turnsand watched her mind as when the urge to skin colour

change would arrive as she let go of some logical mental dominance and give the emotions some free space in her aurathe people passing by did not especially react to the two, as it is quite usual for city parcs these days to have people enjoying laying themselves onto the grass, dance, sing or play instrumentsperma felt the feeling to mask at times when some grumpy ones or ones with anger where

running around or walking their stuff offbut then she kicked in with her compassion for all fellow beings, all my relativesand the urge to hide gave way to more embracing and integrating emotionsit also changing her dance, depending on how she got watchedascende loved dancing too, and he stood up from the grass to also move himself with singing in a low volume to himselfoccasionaly they

met each other on the middle of the grass patch they made their playgroundbut they were not so much looking to dance together but explore their ways beside each otherfaintly feeling knowing the partners presence but still giving each other the free space so each one could find its own accordance of feelings body sensations and thoughts in movingaltough the appartement of

ascende was with 300 sm2 sapcious enough for them both ... one high room with some curtains being installed to separate some spaces like bathroom they could not dance the same way as in the parcthe flow of air in 40 meters height was differentits particles it brought with the scentsthe sunlight only entering trough the windows at the side and on the roofsthe missing grassaltough ascende managed to let

the appartement be rebuilt according to his love for the outdoorsit came short of being the outdoors quite a bitbut still when they returned from the parc, having eaten some bananas and avocadoes, nuts and berries the bought in an organic shop on the way home... they felt in the mood to dance in the middle of the appartement where about 150m2 was empty, all the experiments, bioreactors,

funghi grow chambers, aeroponic, tables with petri dishes, computers and more were near the wallsas there were no plants trees to dance with except the ones in pots and chambersthey took each other as the dance partners, it soon turning into kuschelrock slow dance fumbling eroticly aroused desire to taste each others juicesin the middle of this night at around 1 o clock ascende

woke up to drink some water as he felt his mouth dry from smoking ganja thid eveningperma preferred to eat the dried cannabis flowers with some nuts and seeds togetherchewing it 300 times at least so she could journey discover in her mouth all the flavour and signals to her synapses she got from the nuttyoily thc rich juice she chewed it intobut she also was overdoing it like ascende

this evening, being a bit nervous for tomorrow morningso they both drank some water what ascende has specially constructed an apparatus foron the top was a vessel with rocks, then below it a vessel with smaller rocks, with several following below gradually their size getting smaller untill it is sandtrough all the vessels the water poured into the top vessel can pass trough holes in the bottomsto arrive in the

collection chamberthem vessels being made from burnt clayfrom the collection vessel it got again flowing down trough some artisticly spiritually channeled flow forming schalen where it gets some sort of natural movementssometimes ascende found himself collecting the water with his hands forming a cup like and ascend the stairs to pour it onto the top rocks, being an exercise of

both attention not to loose a drop to the floor and admiring giving thanks to the being of water what allowed his system to interact with the surrounding environmentabout once a day he took about 5 10 liter buckets full of water up the small stair to pour it onto the rockswhen they were drinking beside each other, looking at each other with amour and appreciation how they

learnt to understand their inner connection to similar visions and soul aims... washing each others faces with water and kisses... ascende asked perma how long she thought they should stay in parishe was kind of longing for greater outdoor times with wild places, when perma meant ... anytime from now we can go to my place in the sub tropical area she had built her permahut with gardenmmmh, ascende

optimisticly sounded, i could find someone to look after the hydroponics aeroponics and all the other alive things herewith only taking with the petri dishes what we could culture further at your placeperma... or we too leave them here someone from our supporters experimenting with them eventually…ascende was interested too getting away from petri dish cages and bioreactors, all kind of

encaging plants felt kind of less than idealshim having read about the gardens of permaculturists what after several decades of tuning working the garden had found a self sustaining cultivated wild cycle with the only thing left to do for the human host or guest or .... patient... the receiving party... only thing left to do being to harvest the fruits when ripeof course he wanted to continue with the research in the

laboratory to create all the most marvellous semi-artificial or let us say manipulated cell tissue to cloth the androids inbut there would be others being so happy for three months staying and researching at his place, eventually they too would go the bio cell fusion way enhancing themselves or they would stay more focussed on the advancements in the petri dishes, bringing in live cell

printers and so onyes, perma agreed, it might actually be for the best for the research phase before the crowdfunding to get a couple of other dedicated enthusiasts in the teamand we two can follow our dream of on and in and in between sensual bodies growing.... touching lustfully each others allready cellfusioned skins, getting into near encounters with wild animals and plants6-they

chatted a while at the water placethey chatted awhile like this at the waterplace when perma said,mmmh, altough i feel we should give others a chance to experiment here in your appartement, we can still from time to time contribute some photos text and videos from our tropical placewith ascende saying… i noticed you said our hut meaning your permaplace and your appartement meaning

here, shows me something on my still patriarchic behaviour in our enterpriseoh that is okay, i do not care exactly who thinks what would belong to him or her , perma answered ascendes reflectionbut yes, that is a good place to research the psychic constellation of the participants regarding who will be able to call this or that success in biological cell manipulation evolvementhis or her

propertyfrankly, ascende said, i think we shall open source all of it, everyone welcome to use our stuff how it fits themperma... we just hope that they will use it in a benwvolent avenue what would help humanity to work less and enjoy playing moreascende... i think the key element of our findings are we ourselves, like our skin we are wearing right now... we could try to explain about the gentleness involved

when cell samples being collectedperma.... and highlight the fusioning approach without any other heat than the ones from our bodies, there was no cutting and pasting involved no dna extraction processes, just our love towards the living cells in the petri dishes ascende... us wishing for them to grow together and become a higher class then when singleperma... i do not know if it is higher but the

capability of our skins now are broader and deeper filled with knowledgethey sat silent after that for about half an hourwhen they lay down together holding each other softlyabout 5 hours later they woke up enjoyed some of the aeroponic and hydroponicly grown strawberries with a juice of fresh spirulina microalgae water from the bioreactorsthey wandered around in the appartement

spoke with the plants lauded them how well they have develloped and gave thanks for their contributions them serving the humans in this less then ideal conditionsperma felt well what was missing, the greater connecting wind what brought informations from far away placesthe air in paris was better these days in 2020 when most of the cars were electric populsed and much of the producing

workshops used hydrogen fuell cellsbut there was a kind of dividing effect going on with the air flowing in and out of millions of houses loosing on the way its wild informations and instead being informed with the doings of humansascende looked at it same but differenthe loved the wild but still thought that it is well for the people living in the city to eat food grown near to themperma too was

understanding how this planet can host as many billion human beings as it eventually would need for this race to finally understand that they us do not own this placebecause the more humans get born the more important will it be to use the space allready concreted made into roads etc in the most efficient wayso they were thinking to themselves wandering around in the appartementgetting ready

for today 10 o clock when they would set the cameras in their living places on.... like ... their bed, their bathroom....so they both stayed naked at tenascende laid on the balcony enjoying the early sun and perma standing at an empty wallwhere they extra put a camera upshe started to talk about how they have met in the net she getting presented with the chameleon cells and her still wondering how

ascende got his plant life cell samplesat this moment the people watching the appartement as part of their daily holydays like sightings of plants and cell evolutions in the petri dishes they all were equipped with cameras ... the people started to realize what happened with her talking of chamaeleon cells and slowly dressing herself with her skin becoming pinkish with each piece of clothes she

put on at first they were writing cheering texts in the chat when after perma reacted to them thankingfor the cheers and enthusiastic feedbacks some of the more serious into cell research were asking questions like... how the heavens did you apply the chamelon intelligence to your skin...perma explained then how they both bathed with some tiny bits of successfully lab petri dish

fusioned interspecies cellsascende too ? someone asked with another person did remark .... that is why he is laying there naked on his back on the balcony ... to soak up the sun with his photosynthetic enabled new skinperma was reading the text out loud to ascende adding, that might be your moment now to announce…no , do not spill it my dear companion ... ascende laughingly cried

out, jumping up on the balcony to adress the audienceat this point the reader would eventually be delighted to hear the unveiling of the story how he got his plant live cellsbut the author here has just not figured it out yet ... or...have i forgotten it, was i no writing something of a plant part being trampled off by animals... yes ... but it is not as gentle as the meditation experience

what brought live chameleon skin cells to permaso... that is what ascende said now....i am so sorry but i can not tell you such a mild tale like perma ... my one involves just walking around in the nature the wetlands and forests botanical gardens and parcs of paris looking for plant parts what just most recently have been separated from their plants.... and one of the perhaps 10 samples made

it to fusion with my donated cellsperma coming out onto the balcony and joyning ascende looking in the camerashe said, here we probably have not too much of a reflective method, like ... we did watch the cells fusioning into each other but did not make notes...when ascende was reading on his smartphone screen incoming messages like.... never mind, just tell us at

what date and time you have taken samples of what petri dishes and we eventually see on the microscopic camera recordings what happened there between human and animal or human and plant cellsascende now being relieved.... i am so happy about that approach, thank you for taking up the more logical side of research.... that is where i actually would like to announce perma and me taking

some field trip time into the wildperma supportingly... like we will stay around three months and for this time there is a free space here for some adventuring cell biology researchers....when the texts coming in were allready having three people wanting to be there...7-sharing frenzyso this was done then the two thought at the time when the first three interested announced themselves

ascende said... hey folks , that is amazing perma reaffirming, ya we are so ready to leave into the wild, thank you for continuing here the experiments ascende... you probably will invent new ways too to advance cell evolutions now the three were asking all kind of questions like ... when can we come ... with ascende saying as soon as you can, i can barely wait to feel subtropic sun on my

body, it will be like having dessert to every meal perma said , do not worry about the money, we have a steady inflow of donations now as for the research part of the android crowdfunding 5 year project the three, nilani, mandu and luoma were living allready together in sao paolo in a sharing loving way so they were allready at a heightened group understanding since about

two weeks they were donating some hundreds toward ascende and perma movie live streaming from their appartement they were themselves owner of a house in sao paolo and had good friends what would look after it eventually thez could install some petri dishes cameras and fellow cell evolution searchers there wonderfull idea, ascende commented on their introduction i

bought this flat for a million with 2 millions i got donated from an admirer of my art as of today i donate this flat onto the group effort with us being 5 now who have an equal share on both the flat as well as with all what is in it perma agreed and added, all our findings go to the public domain anyway, and shall be used for the good of this planet... but there is all the installations in here what ascende probably

spent another 200 thousand for ascende ... and i have an account with around 300 thousands on what is solely dedicated to pay fees the city asks like property tax, water, electricity etc.... nilani ... oh i do think we will buy some solar panels with our own money when we move in luoma... and this water recycling system of yours looks quite sophisticated from what i see from the cameras you set online

this morning, i have some ideas how i could enhance on it mandu... but yes, i understand your bold investment into the android project, it will greatly bring firmness into the projects perception perma... you ascende saying that all who live in an appartement or house connected to the cell evolution research for android for all crowdfunding ... all involved persons will have an equal property share on

all the material belongings to the project ascende... yes, like, we two agree that we want to share it with nilani, mundu and luoma, if they for example donate their house to the pool too and have friends who want to do similar research at the sao paolo house too, we five would have to agree on accepting the new ones perma... i like this, i will also chip in with the perma place i built myself on the canary

islands i bought that for 30 thousands what i got donated from my parents for my 21 birthday mundu... what you say nilani and luoma, shall we make the commitment too ? nilani... how trustfull of ascende to know us with videochat some hours and share his one million appartement property with us perma... we both did share it with you three as ascende has donated me half of his before and i

have shared mine with him completly ascende... yes, i probably forgot to tell you, kind of probably patriarchic crum in my brain thinking of my one million investment against your 30 thousand, stupid, i am sorry perma... not that problematic, please do not worry about it, i believe you are growing strong on the gender neutral avenue luoma... i want to give my third of our house nilani... me too mundu... so it shall

be fantastic, perma said, look at us ...5 people having three places and sharing it completly luoma... as i look at it, there is now space for 12 people, making 7 places free now ascende... i believe more... with here well 7 people to the max mundu ...and at our place max 5 as the house is about 200 m2.... perma....with at the permahut probably four to five depending on how

near to each other we can live on 30square meters ----- continuing text 7 on a piece of paper with pen ----- nilani,Ä¶ and you know what ? as my very personal contribution i will donate myself a shorter name,Ä¶ nila ,Ä¶ i am mundu,Ä¶ well well that is a line of thinking ,Ä¶ luoma,Ä¶ nila,Ä¶ lovely nila,Ä¶ thank you, i was considering to change my name for a while now and it feels very good to do it

now when we are in this sharing frenzy ascende laughing,Ä¶ frenzy as when one is excited about tasty food and gobbels it all down as it were the first and last meal one would have ? that how you mean ? nila,Ä¶ exactly,Ä¶ but i think it is a whollistic frenzy, sustainable and,Ä¶ by the good spirit,Ä¶the world can certainly digest some sharing frenzy as with our history the last several thousands of years

of stealing of each other or excluding a part of the population from the collectivly amassed wealth8-nila, mundu and luomanila, mundu and luomawere familiar with being in circles where sharing did heighten the group members counciousnessthere is a worldwide organisation who redistribute funds coming from colonization times... like... descendants of colonising ancestors are

very happy to give part of their inheritance to the organisation what then buys houses, finds homeless or very poor persons whom the houses can be given toothat is how nila, mundu and luoma got their 200m2 house in sao paoloas they experienced poverty for the first fiveteen years of their lives, they felt in good agreement with the android robot companion for everyone campaign it

was exciting to imagine all their friends who had to do the not really nice jobs in the rich peoples houses... one day taking their androids with to work and instruct them to do the jobsas they were giving insights about their lives to ascende and perma, an idea was forming in ascende s mindhe said... what do you think of the sharing of houses like we just did now ... as an independent model,

independent from the android crowdfunding goal...luoma answered... i find that a good idea, as the ability to travel all the world and stay for free at the houses what are given into the pool... can be motivating for the people who not particularily see the necessity or benefits for society with an android help for everyonenila... we might even combine the two approaches with for example one or more

androids in the houses what can do the repair and maintenance worksif the temporory visitors agree with itif they rather to prefer to live without machineswhile staying, the tasks can be done when they moved out onto the next houseperma... of course they can also do something themselves if they feel capable of performing as well as the androidsmundu...with it not being a matter of

concurrence or competition but one of choiceascende... this way also dance companies or artist colonies could join the sharing movementthey continued chatting awhile about the possible synergies of the two concepts when nila said... hey, i just saw on the net a flight from sao paolo tomorrow morning...mundu... let us book itluoma... but do we have the money to pay for

it ?ascende... i would very much like to come up with the needed sum, let me know your account details and i send it to you electronicly this eveningnila...how generous of you again, we are looking forward to see you soon then in paristhey said goodbye to each other wearing happy smiles ascende and perma were very satisfied with the events and plans initiated today they made their

round to look and greet the experimental cell cultures aero-,hydroponic plants, bioreactors and funghi chambers, snacking here and there with giving thankssoon they were well nurished and met at the water place to silently sit there to watch the drops coming forming below the sand filter9-explicitly sexual the wellcome party inp arisexplicitly sexual the welcome party in paristhey landed in paris the

following eveningon board of the aeroplane they followed ascende and perma via internet on their rounds to talk cuddle and eat their indoor garden fruitsalso the cell cultures were developping further, the petri dishes streaming video to the netascende was thinking wether they should stay some days more after nila, mundu and luoma arrivedperma too was thinking along these lines and said aloud... we

could eventually have some good fun here as five cell evolutionairy experimentersi womder wether them too will be sensual dancingly swinging feeling or if their approach will be a more logical rational oneascende...from what i understand from them chatting with us, they are strong in both areas, rational and sensualemotionalplus they have southamerican sense of partying what sure i

admire, in the sense of being filled with joy from moving in rythm i find myself often singing humming to myself smoothing lullaby slow tunesperma... you are right, that might bring some new dynamic into our spaceascende... possible that the cell cultures as well as all the plants and microalgae might profit greatly from this life energy in rythmsperma... so we stay

some time, if that is okay with the three, like ... we told them we are going to leave as soon as they arriveascende... good input, they might eventually want to continue with their threesome energies... or they might be happy sharing our both group aurasnot long after they had exchanged like that the three were here and hugged ascende and perma warmlythey were hungry so all five went

together to tour the appartements for tiny strawberrie and tomatoes on the aeroponicsmundu was enjoying a handfull of spirulina microalgae and urged luoma and nila to have one tooascende and perma were bathing in the auras of the three excited ones occasionaly they were dropping an information here or there about the growth cycles of this or that experiments but most of the times they

were studying their new partners in this research and devellopment enterpriseonce the three were satisfied nutrition wise they turned their interest towards ascende and perma, asking questions ... nila wanted to know how it felt when in the bath their skin cells merged, with both ascende and perma describing it as a constant being blessed with warmth and richly nurturing oneluoma was

listening to them and approached ascende , fumbling at this pants, pulling them down quickly while going down on him to suck his penis with moaning soundsshe wanted to have his seemen at this momenthe talked about the cell mergingascende looked at perma if she would allow it and found her looking at him with a loving smilethen she turned around to give mundu a kiss on his mouth

what was still green with microalgae juicehe too got horny and not long he was having a huge hard what perma and nila now both did comfort with their dripping vulvas alternatlymundu ejaculated in nila as they were very known to each other with ascende emptying himself in the recwptive awaiting longing for luomashe drank him with satisfaction ascende then was so vibrantly charged from

luomas admiration that he went onto perma with strong vigourshe came quickly on his strung pumpings and he wetted her with his essence, what she took in and built it in herwhen luoma and nila were licking each other tounging their labias and anal openings, climaxing and squirting all over the placenow lying alltogether in a cuddlepuddle of squirt rubbing each other with it and starting again and

again to draw each others ecstactic fluids out to devour them researching taste and consistency of semen and female ejaculate ... a feast of lovethey slept after that many good hours, just there by the water recycling installation... with luoma waking up in the middle of the night to have a peewhere would be the toilet she asked herself, thinking then, how about i use the water bucket

ascende uses for carrying up the water to be filtered... and give my pee also in this cycle... as our loving togetherness last evening has surely made us appreciating each others juicesso she peed in the bucket and did pour it over the sandwhen perma woke up seeing her doing itmmmhhh, why have ascende and me not thought about that, it is flowing allready most wonderfully with the

threes, them doing allready their own thing enhancing the completion of the information digestion cycleascende too was awake now having seen luoma, she smiling at him, taking a handfull pee out of the bucket and drinking it half, offering ascende somehe was looking at perma who was nodding at him encouringly while herself feeling the urge to let go of urinewhat she did standing over the kneeling

ascendewashing his head with her urinewith the urine now spraying mundu and nila they awoke to join in the pee party, pissing in each others mouth with love and appreciation in their eyesthe place now slippery wet and smelling strongly of micralgae and fruits as well as cannabis and mushrooms what they ate the evening beforetheir clothing was by now removed and served to soak up the urinewhen

they had drunk each others urine their sex drive got awake again and another round of penetrations suckings lickings let the five roar cry shout out loud the place with ecstatic feeling expressionsascende and mundu also tried each others semen while sucking each other off in 69 positionwhen everyone had orgasmicated, they put all their clothes what were soaked with urine

and all kinds of fluids released in the sexy intercourses... in the bathtube what actually was quite big allowing easily three to lie beside with eventually three on topascende and perma looked at each other and were thinking the same... what luoma and nila spoke out loud... hey... how about we having a bath all together now with some samples of the cell cultures...as we know you

now with your semen, permas female ejaculations and your both urine, we might eventually find your evolved skin cells being congruent with ours...mundu did not bath with as he wanted to research the skin cell evolution separatly with his own cells in a petri dishso the four of them did take the bath with some tiny bits of petri dish cells of ascende/plantand perma/animalfor about an

hour did they lay beside and on top of each other without moving much, stroking each other tenderly and occasionally kiss each other full of thanking and appreciative spiritnila and luoma were not quite seeing the same innerpicures as they did not have so much training on that as well were not consuming thc/psylocibin that intense as ascende and perma did since in the appartementperma at her

permaplace was also eating mushrooms and cannabis, but not that much as herewhen they lef the bath to go to sleep on the beds ascende and perma had prepared while their flight from sao paolo to paris... it was not quite clear what the effect of the bathing was, if their cells had merged or not... we will see in some hours when we wake up perma whispered to ascende with a motherly smilein any

way, this feasts of love and appreciation we enjoyed this nigt were such a great present to measende hugging her and saying ... we are so very lucky, thank you all what is for this harmony----------nila, mundu and luoma are 25 years old with ascende and perma 55---------mundu had been studying the petri dish film recordings of the last two and half weeks since perma was in paris, while the four had bathed

with some petri dish cell sampleshe began to see the patterns of how the cells did grow together to merge their characteristicswhile the four slept happily after their bathhe put on some microscip lense glasses with camera to record what is happening on nila and luomas skin cells after being so lovingly impregnated by ascende and permas dna trough semen, female

ejaculate,urine and bathed with the petri dish grown cellshe was not surprised seeing the same merging patterns and congratulated himself as not having participated at the bathinghe believed that the sexy exchange of dna was still a strong influence, he found both permas juices as well as ascendes semen of pleasure inducing tastebut he would want to find his own plant and animal cells donation

either here in paris or eventually at another place where he could travel too as the network of houses probably will grow one people have watched the recordings of our chats and love orgies here in the parisian appartementhe might even try to build his own place similar to the one perma built, a place where he could meet animals in the wild not far from the hut he would livehe thought to himself

while recoding nila and luomas microscopic skin evolution... i could invite some dance jamming sounding harmonysearchers from hawaii to live with me and we could find each our own power animal connection and wisdom plant marriagei am sure that miema and maru would be gay for itmmmhh... but how about nila and luoma here in paris on their own... they might invite

some of our friends from sao paolo as to give this parisian appartement a proper juice up on rytms and pulsations of libido and life joywhile he is filming and thinking like this, nila wakes up and he tells her about his hawaii planshe thinks it is great and names 5 of their friends in sao paolo she thinks would the place here and be too happy to evolve in such a fuckingly sweet settingwhen luoma also

wakes up and asks mundu wether he would come back to paris to merge with the found animal and plant donations he would eventually find in hawaiimundu.. i am not sure, i might perhaps set up a little petri dish lab there... actually, that could be an ideal expansion sheme...some stay here in the lab and evolve the fuckingway and bath in others petri dish cell cultivations while some do

go out in wild places to set up a simple nature respecting outpost where the direct contact with wild nature is of greater focus...luoma saying... and there can be licking sucking fucking too in the wild... with nilan moaning.. getting me horny again my tasty sister... i am gone stick my tongue right up your but in a minute...mundu...and i will feed your mouth with my hard one,luoma...ahhyes

you two beloved ones, take me again i am ready right nowascende and perma were kind of half awake hearing their conversations and lovemakingthey held each other and smiled knowing that their choice of sharing with the three was a good one10-they slept trough into early afternoonthey slept trough to early afternoonit was no big surprise seeing nila and luoma having successfully

integrated the features of perma and ascendes new skinthey were chasing each other trough the appartement playing with their new chamaeleon style blending in featuresmundu did not change as he for one did not bath with the petri dish cell samples and second did not yet want to changehe wanted to have his very own gentle meeting with wild plants and animalswhen he told ascende who was laying

himself onto the balcony to breakfast some afternoon sunraysabout his plan to move to hawai and setup a similar hut like perma had in the canaries(here the author would like to confess a possible incongruency in the story... are there chamaeleons on the canaries ... perhaps not native... but eventually some people brought them in from the tropics to set them free here ...)ascende was very

interested in this approach, he saw the benefits for the research projectwhen more and more individualists like mundu went to new wild places to receive all kinds of new samples, possibly find new ways of merging human and animal and plant cells, ways probably not yet known to science... that would make a wide base on what others here in the parisian appartement could build up onperma was now

also photosyntheticly enabled, as she too bathed last night with ascende/plant cell culturesso the four of them only ate minute amounts of the aeroponicly grown fruit in the appartement leaving it all to mundu who was now the only one of the five unchangedthe three girls joined into the conversation when ascende was talking to mundu how they would finance the continuos

setup of outposts in wild spaces everywhere on the planetascende... there is still around a half a million left of the money an art conaisseur donated me 3 years agoi could set for example 200 thousands to this purposeperma... we could buy in one act some good sized areas of the amazon, the congo and the sumatran rain forests ... beside a small patch of wild space in hawaii for you mundu... and the

ownership of the rain forest spaces we would share with the native tribes therenila... if they agree with our goal to create millions of more than human like androids ...luoma... if we explain them that we not plan to exploit the androids for unsustainable purposes but we would like them to be sovereign beings what we do ask the favour to help us in the transition timemundu... the transition

from the everyone fights for survival in an scarcity dominated economy to a hopefuly soon arriving future setting where sharing and wise recyclying of the allready mined ores and new nanotech materials will bring abundance to all...ascende... i have heard the argument that the native people in the rainforests do stand in the way of economical progress when resisting

roadway and waterdam constructionof course it is for the best of the planet if they resist the destruction of the few left primary forests... but with our research... where we are very thankfully looking to meet wild animals and plants in most pristine areas as possible building dna for the androids... there might be an immense economical value nila... i am seeing before my inner eye how a parrot

in the amazon shares its dna with one of us... how precious would a feather clothed flying android be...in hard money translation...luoma... you are right, these are very good argumentswe have just discussed this morning the three of us whom we could invite to come here to spend some transformning timesperhaps we could ask our friends in sao paolo if they wanted to go to the

amazon to propose this joint venturesecuring the land rights for the native tribes while granting us the right to be guests in their territoryto gently collect dna samples for our android projectnila... i know allready 5 who were very interested when we told them we are leaving to paris for cell evolution researchmundu... and i have made some good contacts with some progressive thinkers in the

congo bassinthey are very concerned to find possiblities to help saving the last areas of primal forests...perma... with a traveller who came once to my permahut i spoke about a tribe in sumatra what would be happy for help in securing their habitat...ascende... let us go there first before we go to the canaries...nila,you take 60 thousands to go to the amazonmundu travels to africa with 60 thousand

to secure some congo rainforests before doing the research in hawaii and perma and me take another 60k to sumatraleaves 20 thousands for the traveling costsmundu... and the hawaian place we probably could crowdfund... would give again others the possibility to join in... like ... if we need 50 000 to buy the place in hawai, everyone giving 5000 would be a co-

ownerascende... with me giving the first 25 000 for the five of us being allready half of the ownersmundu... but will you have enough reserves left to fund all the necessary contributions to the host cities of sao paolo, paris...ascende... i have set aside for that 300 000 allready...when the rainforests parts are secured and you have the hawaiian place half way funded, i will have still a

hundred thousand left what i will keep for travelling....perma... but eventually we will be able to learn cellularily from the parrots ... sample cell cultures from the amazon... and in my place in the canaries i might be able to be blessed with some spit from my dolphin friends.....luoma... so you hint at a stage of our cell evolution growth where we can shift from feathery winged to smooth

swimming fin enhanced bodies at will.....mundu...if the cell samples are being given to us with no or allmost none violence involvedascende... i wonder if we should keep sending some samples to paris as to have a central lab where the ones who would quickly become multicellularly enhanced...perma... yes, it will help take the load of the wild places and will speed up the funding of

the android research, like we said we would need 5 millions to be ready to make a prototype...ascende... you are right, if someone who is kind of rich with 20 millions made with an internet software sell comes visiting our parisian lab and bathes in some tiny bits of 20 or so different human/animal/plant petri dish cultivated cell samples we have helped to grow

with our own cells and the ones being given to us in pleasure... the rich guy might decide 3 millions to donate to the project... luoma... i know some professional theatre travellers in many cities who would give half of their property for the ability to shapeshift their skin from wings to finsand it was this way it wentall five of them left with some money in the pockets and petri dishes cameras and

satelite internet phones to their destinationsonly luoma stayed in paris to keep up the conversation with the hundreds of new people who were now following the live streams out of the parisian appartementwhen nila left to sao paolo, mundu for the congo, perma and ascende towards sumatra the next morning, there were allready 6 people signed up for wanting to visit luoma in her bath...

partly they were sex addicts enticed by what they have seen in the last two days via the 24 hours livestreamsinfrared in the night... but to same parts as they were sexually hungry they too were longing to find reconnection to their cellular completitionperma and ascende... feeling a bit parently for mundu nila and luoma... had long talks with all of the six applicants and found them to be

worthy of joyning ... luoma... and do not worry, if i see one who wants to exploit my fun for sex or is not gently enough in the bath when growing multicellular... i will ask the men or woman out ... by softly explaining to him that the gentleness in our research is of the highest importance...nilq... like last night when we pissed on each other and drunk each others urine, this was with full of admiration and

appreciation for each others high degree of healtyness, i would never allow a sick person to pee on me in a dominating negative emotion... so would you never, luoma...with her saying, yes my fruity sister, we know what is healty and what notascende... oh perhaps you forgot... the sexual intercourse and or uptake of others peoples urine is not a requirement for the skin cell

merging...perma...
ascende and me have both bathed alone with the cell samples what we have cultivated the days before...mundu... exactly how i want to do it in hawaii or at least similar... nila... so you think the quality of our skin cells having merged with ascende and perma s experimental skins is lower than the one you will have when your own skin cells will merge with animal

plant informations...mundu... i really do not know... but i would advise you two luoma and nila to get out somewhere in the wild too to get your direct wildness upgrade...perma... good subject, altough i do not see it as a problem when one human being donates his /her cell cultivations to an other human being, this are two approaches what can well be combined ...ascende... with the great

question here... can someone who has merged with an other persons allready evolved cells ... find a next merge with animal plant directly ... luoma... i actually do not see a reason against it, look, when i heard you speaking about how you bathed in your cell cultivations there was this urge in me to devour your semen right while you was talking about the merge... this semen given i that

moment was probably helping my organism in the bath with your petri dish cell samples to accept them, samewise with permas ejaculations i licked up in our little orgy we enjoyed last night, please understand me right, i do not plan to entertain sex driven ones ... but if they are gently and well behaved i might teach them to use their sexual drive for their and our goal of personal

spritual as well as body material growth...ascende... we believe you will well master the task to spend time with healty minded individuals while we are travelling...perma... when you luoma just now talked about the urine exchange happining in a appreciative way i had to think about a documentary i saw on tv recently where a reearcher talked about how like a perfume he found tigers

markings to smell to him... altough the marker fluids are not urine they are probably similar as with our female ejaculations what are not urine but share some chemical components...nila... you mean people could eventually take markings from wild cats or even all animals urine to mix them with their own cell samples in the petri dishes...ascende... this could work... as well as

eventually we four who have allready chameleon and plant cell enhanced skins.. we would perhaps only need to bath with some tiny amount of animal markings/urine to further enhance our biological gene wealth...mundu... i was reading on the internet a fantasy novel where a man and a woman who wanted to live as eremits in the wild met at some wild river and bathed there in the

pools with the frogs and algae, they made lots of sex in the pools and peed in it, drank from it bathed in there resulting in them becoming enhanced with animal and plant feutures...we too might find it enhancing us when we bath in ponds and waterplaces where wild animals bath and take some samples for to cultivate them in the petri dishes in our labs ... microalgae, frog skin cells,

other animals sweat.... mixing our own sperm or female ejaculation fluids into the petri dishes...altough these were most important insights they shared till the last minute in the appartement, they needed to leave now to catch their planes what would spread them all over the globe... in the taxi to the aeroport they tried out their satelite phones with laptops so they could see luoma

talking with the 6 interested to visit about their most recent insightsone woman did propose to build one big pool in the middle of the appartement where sometimes water could be taken out to let it filter down the water recycling installation with the stone and sand filtersthisway all the informations of the bathing processes would circulate again and againascende was jumping

into that discussion.... why have i not thought about it, you might even plant some plants in the water what would help the recycling...perma....altough luoma can decide on her own how and if she would allow such a semi-natural biotope pool in the appartement to be built... i find it a very suiting propositionlike this it went on ... they could not leave it alone while on the planes watching following each

other in text and video chat thisway also not feeling the small but real pain from having to leave each other when they did find that wonderfull harmonies11-the this is that if you build the semi-natural pool in the middle of the appartementthe thing is that if you build the semi-natural pool in the middle of the appartement, it will totally change the character of the place, nila raised as an objectionwith

the one of six wanting to be visitors who brought the idea up thinking about it for a moment and then saying in a soft melodious voice... you are so right nila, i have not thought about the importance for emptyness, nothingness in the research for the advancement of cellular structureswhat good would it do to take away the center piece of the appartement what allows the built up energies in the

experiments along the walls to flow into each other aethericlyadded the one who introduced herself as monicaan other one of the six aspiring newcomers, fernando, did add... i can only support to keep the appartement as uncrowded and as least stuffed with fixed installations as possible, i have seen your running and hiding chasing each other playfully around at the place luoma and nila

and it seemed to me an important part of the integration for your newly reached cell evolution... luoma... as you said ascende... the ones who are here at the moment who are accepted members of the research enterprise, have full power to decide after hearing all of your inputs and monicas generous offer to finance the constructiom of the semi-natural indoor pool... we might find a place

beside the existing bathtube along the walls…ascende... and eventually when the plant and sand filter systems will be in harmonious tune to provide the pool with a sufficient water quality, we or the ones who at this moment live in the appartement... might decide that there is no more need for fresh water pipes and emaille bath tubes ... as the informations in the semi-

natural pools are highly valuable contributing to the cell growth of the ones bathing in it... mundu... makes me think of mix combinations from microalgae with humanimalplant cells from the petri dishes living on in there continuosly digesting and upcycling fresh input by the sweat of the experimentersfernando being excited now... i am a dancer and so are ava and rumu too who would like to

apply to be among the next researchers and experimenters in paris... we will certainly sweat alot while dancing with each other, looking singing enchanting the many coloured microalgae transparent seetrough bioreactors... i can think of us drinking the microalgae alive fresh watery juice and sweating it refined out, then bathing in the pools, cuddling each other while laying in the poolluoma...

that sounds very contributing to our goal of integration and adaptation towards the merge of all kinds or living organism, i am sure we will have great dancing, bathing, enchanting and mentally imagineering times together…so fernando, ava and rumu were accepted by luoma as the next fellow appartement-mates and research collegues, with the other three now introducing

themselvesthere was michael, suleiman and li who were freshly finished with their studies at the university, michael a 30 year old doctor of human medicine, suleiman 28 years old amolecular biologist and li 29 having a graduate in plant anatomythey were living together in a rented flat in mumbaiwhere their parents had financed their studiestheir parents were not poor but neither rich,

with all of them providing their children with the liberty to proceed after their studies how they felt suiting their personal taste of lifeas they were accustomed to the kind of rational dominating thinking and secondhand information processing via textbooks, they volunteered to focus their attention onto the documentation of what happened so far in the parisian appartement in

terms of reproducable methods ... how to grow a set of multispecies cells to print the flesh of my pinted at home android companion... as the overall theme...perma was very happy for them to offer their rational discipline, saying... we sure could use some cool look at all the many-leveled multidimensional progresses we achieved till now... nila supporting that and adding... and you

might find yourselves being supported by the dancing bathing body voice experiments of fernando, ava and rumu in the way like a wealthy person enjoys seeing live dance and music performance while eating...with suleiman answering,... might be so, but there is still the balcony to get away when the dynamics get that hot it would make it difficult not to partake fully in it mentally... with li and

michael both supporting michael in adding in a happy smiling tone... and we might even put earplugs in when the kissing and fumbling or orgasmic cries from luoma, fernando, ava and rumu get overwhelming... this causing all of the now videoconferencing to laugh out healtilyadcende and perma then said goodbye for this moment as they wanted to catch some hours of sleep before

landing in the south east asian regionmundu also only a few hours away from landing in the congo bassin started to chat with nila who was on the plane to the foresty lowlands of southern america, the amazons...he asked her... what do you think will the elders of the tribes who live in the forest answer us when we ask them for the admission to research in their territories... with nila replying... there might be

all kind of different views onto our quest, we might be thoroughly examined on behalf of our intentions and motivations... will the androids robot companions designed to help humanity, will have an understanding of the native tribes wish to continue a most undisturbed traditional lifestyle of sustainably living of the forests offerings... some elders might tell us that we might support their land securing

efforts with providing finances and as welcome guests may tour the area guided by the members of their tribe, but how we would sample genetic informations and use them for whatever purpose, that would be solely our own responsability...mundu...
you do not think they would find it against nature or ethos to gather life informations with the goal of helping new life forms to spring forth ?... nila...

naah... i do not see that coming as we will explain them how we lived together in paristreating the animal and plant cell samples with greatest gentleness, respect, appreciation... and that we are striving for helping to create many hundred thousands or millions of androids who will be given to the landless, indebted, enslaved in too demanding and underrewarded jobs.... that the androids our

research aims to make possible will actually be given to the very people who come now to fell the trees and wash out the forest grounds in search for minute amounts of goldthis people then might quit their low paid forest destructing employments and instead sit together with their android companions to show them how to weave blankets, swinging hammocks... build pots and vessels

from clay or press banana leaves into temporary usable plates, knives and forks, they might sell their wares directly via the internet to near or far away customers... others might decide to travel helping customers to build cobb buildings, using earth and straw, fallen tree branches and locally abundant ressources to build houses...again others might offer in union with their allways to the net

connected android companion consulting services, on any topic starting from humans body health towards governing their local community...when mundu adds... as for the allways connected on the net, i believe that there are two approaches, one with satelites we eventually transport up in the earths orbit ourselves once the crowdfunding and delivery of the first batch of android

helpers successfully happened... and the other component a one-to-the-next relaying broadband radio wave packet transmission technology what would allow the androids to share access to the global net also in case there would be no satelites... when nila cautions... but allways on would eventually be of a disturbance to the natural ambiance of a mostly wild place where for example

an android would be taken with or go there for its own personal research and individual growth... mundu agreeing... we could design the radio waves following the insights we gain from the cell merging processes...ascende being woken up by the landing preparations on board of the aeroplane he travelled with, jumped into their exchange... i have just now followed your last sentence mundu, probably the

rational observations and documentary approach of michael, li and suleiman might show us how these kind of more organic natural or near to natural antennas might be built…nila... or saying... what kind of cellular combinations could grow into such information sending and receiving organs…perma also awake now... mmmhh... eventually we might find a whole new approach of

growing bones and flesh tissues ... the cell printing 3d printer instructions eventually being less top down deciding how to lay cells onto each other but listening somehow to the growing dynamics of the living micro units itself12-perma and michael discussing the possible changes for the 3d life cells printing devicea tries to write a second text the same evening at his laptop,Ä¶ continuing the

esotericly selfgrowing allowing life cells 3d printer line of tought ‚Ä¶ interesting you point out the construction of the printer, michael said, sitting in front of one of the models ascende had bought for the possible use later on in the research project we have studied free energy, zeropoint, overunity effective devices via a webpage when we were in mumbai studying for our internationally

respected university degrees he and suleiman as well as li were now on the aeroport, having invested all their savings to catch the next flight to paris were they wanted to be there where history happened in cell biology fields,Ä¶ li now saying ,Ä¶ we have not figured it out yet how the different prototypes work, some with magnets and teslacoils, others with hho, others using water

atomized as fuel, some with only a few moving parts, others with turbines and fast rotating setups,Ä¶ some even have levitation side effects ,Ä¶michael,Ä¶ imagine if we could provide the android with such a solar plexus, the center of the vegetative nerve system being a free energy device so the android could power itself even when not exposed to the sun and no food vital energy source is

available,A¶ ascende and perma were now landing in padang on the island of sumatra it was the end of the rain season, it had just stopped raining with mists rising from the now strong shining sun, ascende felt the food like feeling when his skin exposed underarms came out of the aeroplane in direct contact with sunlight in his dataglasses he could follow the text chat they mostly had with him typing

some text with his sensor band equipped fingers, he wrote on the sides of his upperlegs, it looked like he would silently play piano or drummed a rythm this is hot stuff what you are talking here, me too has read in the last 15 years many hundred reports how inventors were trying to get their kind of working, working to some percentage with overunity, at other times not working or parts breaking,

depleting etc. ‚A¶ kind of, i believe that most of the inventors, engineers and makers have good intentions and really want the devices to bring some intelligent and sustainable energy to this planet as for humanity get away of this stupid coal, oil and gas burning trip a sadly high percentage of the industrial places now worldwide are hooked on some probably are frauds, meaning that they either with knowing it

oversell and underdeliver, possibly thinking they would deliver the real stuff later or others eventually outright cheat ,Ä¶ perma,Ä¶ when ascende showed me the webpages with the reports about the inventors, inventions, devices what are on the way to the marketplace or have been nearly there ,Ä¶ i found it difficult to discern exactly the degree of righteousness of the inventors ,Ä¶ micheal,Ä¶

agree on that, possible that we have studied the same site, but there are also the open source plans and descriptions, if i only would understand a big enough part of it so i could 3d print some parts to replicate some devices,Ä¶ suleiman ,Ä¶ i am beginning to see some dynamics and schematas, i mean learning to read them and follow the logic ,Ä¶ li,Ä¶ mmmh,Ä¶ let us not hurry this one up, we

might find enough time beside documenting the cell evolutions to look into the plans and blueprints the inventors have open source put on the net,Ä¶ perma agreed on that, talking into her micro she wore on the sides of her blouse near her throath let us come back to this possible change of construction the life cell 3d printer would need as to be able to give the cells enough time to grow into

each other ‚A¶ must not be too difficult, eventually just find the right time intervall when to print a layer of cells and when to make a pause to let them find their own growth pathways‚Ä¶ suleiman ‚Ä¶ with us having studied the microscopic movies of the past successfull mergings, our inner imagination will eventually help the pathways to form when we look at them ‚Ä¶ like while they get printed, we look at

them via the microsopic cameras and compare the ongoing cellular communications with the patterns we have seen from the recordings ‚Ä¶ li ‚Ä¶ we could also have several monitors beside the 3d printer what would show a life feed of microscopic lenses recording luomas skin, as she has allready reached the photosynthesis from plants and chameleon abiliites, she wearing a

kind of cameraband on a part of her body with what she can move around mostly undisturbed,Ä¶ micheal,Ä¶ i have great interest to partake in this journey myself to contribute something, like i will swallow some tiny camera what will show me how my internals look when i take a bath with luoma and some cell samples as to grow superhuman too ,Ä¶what am i saying super, it

perhaps is more like, more complete ,Ä¶ eventually,Ä¶ luoma,Ä¶ hey who said i would bath with you,Ä¶ no i am only joking, you look quite attractive and sensible, we sure will find each other tasty enough to aid the merging with our joy drives of body near field interactions,Ä¶ suleiman and li were not really into the bathing stuff and kind of same like mundu were looking forward to embark on a

journey into the wild to find their very own animal and plants moment when their animal/plant guide would donate them their cellular present they were thinking about going to the congo bassin when the documentation process of the initial research phase was documented and to some parts theoreticly explained,Ä¶up to the point where they arrived in the appartement ,Ä¶ what was about half an hour from

now, as they were landing in paris an hour later than when ascende and perma landed in padang, sumatra,Ä¶ or the other way round, depending on what route the fuel burning aeroplanes would have taken and what models etc,Ä¶ the author a is at this moment not sufficiently interested to provide accuracy or realistic calculations but a sense of humour would be nice too is not it so isnt it

,A¶ ah well, what is nila doing, she having landed or soon will be landing in sao paolo to meet the five friends of her what she allready told she wanted to go with them on a mission into the amazon she was kind of dreaming imagining how she would approach the parrots in the forests, ask them for their blessing and cellular assistance so she might eventually find a way to integrate their cellular knowledge into her

being ‚A¶ if possible she then could set up a laboratory at her place in sao paolo similar to the appartement in paris and the 6 of them could practise some merging sexy meditation sessions ‚Ä¶ the topic of the cell printer and all the documentation explanation thing was not hers, she would not want to touch machines if it were not necessary like with her phone using it to

communicate and watch stuff ‚Ä¶ she liked bodily sensations, vibrant colours, dancing, bathing, sporting exercises, sexual sessions as well as meditational dreams, with her was no shame but only unconditional sharing of what she liked, may it be yours too she often said with a strong glowing emanating from inside her, she ripe and plentyfull with cosmic rays from the deep good home13- some

autobiographical obvservations in the middle of it allit may look funny or kind of strange to the reader that the experimenters can not let go of talking and chatting to each other, jetting around the globe while discussing possible hardware or process flow design of life cell tissue printerswhat is all the rush about one migh think...and yes if a looks at it, there is much excitement in all this

tale of a possible arising robot companion dawn, excitement as in, a himself feels like he should or would really like to contribute some part towards the uplifting of humanity out of the scarcity and general fear and fight for survival state... a projecting some of his characters or wantings to be his character traits... onto the protagonists in this fantastic novel... it might

be part science fiction, but then, a is well aware of his lack of technical accuracy and himself just too much into potential storylines, scenarios, episodes following each other to get down onto a sober description of the tech he writes about...this not an apology but a kind of sidenote to the reader or a kind aufforderung to eventually check some more technical serious places in the nonfiction

paperbooks or internet to read about the exact workings of cell biology, overunity, zeropoint energy... having said this word of caution... like...do not believe anything written here as this is bare fantasy being pounded into a smartphone by an impatient author who thinks that his writings will do something to entertain or even inspire some fellow human beings... hey why so cynic... let a say that

nicer, like… a is well aware of his personal situation being fuelled by an urge to contribute to the betterment of the human handling of the ressources this planet provides, this wish to share some potential future scenarios with his fellows makes him excited and in the heat of the moment the accuracy when describing technical concepts… is missed or at times quite severly lost... on top of that comes a

certain logic-lazyness of a who was never really into mathematics, causing himself in these days to just babbel on with the ideas regardless of consequences on the eventual readers mind.... ahh here it comes again, the doubletwisting wanting to be funny again, are you not... smiling to himself both a little amused and part annoyed about the lenght this excursion now takes on... the length, here

coming to an other aspect of a s behaviour... oh why not just dive into this for once, a little detour highlighting an amateurs aspiring writers mind... altough he thinks that the most beautifull and his mind impacting novels have been siddhartha from hermann hesse and the starmaker from olaf stapledon, they both sharing a lenght of not more than 100 or 150 pages, he thinks

somewhere along the lines of ... if he could just keep on writing several thousands of words a week that would train his storytelling muscles very well... and who knows, if he would just keep on letting it all out as it enters himself when he is in inspired or kissed by the muse states... after perhaps having written great amounts of sometimes only loosly fitting together parts... a

might one day enable himself this way to write and hopefully illustrate a nice cozy heartwarming piece of hillariously romantic and life fizzled gayness... he prays to his future self that this 90 page enchanter might not be too far away now... a 90 page symphony of well clicking into each other preciously handcrafted gems of mental emotianal comfort inducing lines and letters arrangements-----

selfobserving note... it took half an hour to write this two thumbed on a 4" touchscreen... wondering how well a fold out bluetooth connected keyboard would allow 10 finger typing, ah yes, these were times when a was sitting in his camping chair balancing the tiny nokia smartphone standing on the holder sponge of a neat little clapout keyboard... mmmhh makes a want to search

his belongings to find it again... annoys him greatly that he lost sight of it since about half a year, unusual as he finds himself having somewhat a kind of half certain knowing where he can find things within his belongings ranging in the size of approximatly 20 banana shipping boxes14-free energy device in the bloodstreamwhile ascende, perma, nila and mundu are switching off their technical communication channels a

while or better said, change their focus of attention towards the happenings in their near physical area, planes landing, custom procedures, new colour combinations and writings on billboards, nortification signs, unseen human crowd movement patterns, the thrill and blessing of traveling with its novel smells and refreshingly different sights... so while they were shifting their

focus onto the material immediate surroundings... micheal, li and suleiman too were slowing down their pace of external chatting, partly because them too were letting in the rewarding experience of arriving at a new space, them now getting out of the taxi in front of the building in paris where ascende had secured the appartement with the money he got donated with for his lifetime artwork...

here now would fit well some flowery charming description of the smells of freshly baked croissons coming from the bistro around the corners, a sound of laughter from a relaxed young lovers couple who just came down to strenghten themselves sitting at the terasse drinking some coffee and let the mild afternoon sun compliment their faces... but there is more chatter coming

online, it is michael again who thinks about how possibly could the zeropoint exotic free energy device mechanisms be translated into the language of guided or helped or ... motivated... biological flesh cell growth.... after that moment when the three got out of the taxi, cherished the bistrot emanations and looked up at the building where such exciting work was waiting

for them... he could not help it but. had to tell suleiman and li about this idea while they ascended up the stairs carrying only some small hand luggage... they were of the .... the less clutter and belongings the better ... types of peopleli said... i see thousands of tiny wheels and turbines made of bonelike material being turned inside the androids veins and arteries by the flow of its blood... their

motion translated into currents of electricity what is stored in battery like layers in all areas of the body... and suleiman adds to li s imaginary.. with magnets and coils made of muscle tissue nerve strings tendons and all that, rotating in the cave where with the human anatomy the stomack is placed...that is quite something, luoma shouts out to them from up the stairs down to them, you

are envisioning so inspired, makes my heart jump ... when they reach her and welcome hugs are exchanged... please come in and feel at home, it is great you made it that quick to come to be here....writing analysing note: 20 minutes....15-light traveling inside the bodythe mind sends an undefined colourly to the heart, from where it travels in many colours towards the extremes hands feets

brain .... the impulse of light being sent is the a sensation travels from touching the arm to the brain via the heart 0 a sensation on the leg travels in many colours of light to the brian via the heart a side research topic of li was the possible visual depiction of what could possibly happen inside a human being when receiving sensual stimuli one picture she is working on both in his mind and on

the computer... a smell enters the nose and as soon as it is recognized by the flame in the heart of the person, its many fragrances and smell components molecules travelling the air get translated into variously coloured lines of light same with touch sensations, amouse bouche pleasure in taste all senses incomings what are being somewhat counscious registered and processed

the second drawing was showing a moment when the experimenter li creating inner light in all kinds of shaped rays lines circles cubes with colours according to feelings hereby the mind sending light of unspecified mild pink violett or white or golden colour, the heart then adding its definite colours and sending it towards all extremities head feet hands some lines were parallel some

intertwining and rolling with each other in the stretch to meet the toes and fingertips rainbow snakes interhuddlings of thick and thin pulsating or steadily glowing brush strokes of life bearing light these two modi how the light can travel within a human animal and or plant body one via sensual stimuli the other via guided inner light mental spiritual light productions possibly emmanating from the brain

as a receiver of the cosmic light powers michael and suleiman were having this plans of free energy devices in their plasticly modelling imaginations and suddenly felt like drawing with light could be an avenue where eventually the hard precise and dense parts could be replaced with more soft and foamy ones., or it would perhaps not need any bigger modifications as the human body eventually

was built to make this light ping pongs or sustain its organs with pleasure guided light and love journeys electric signals perhaps ? brain firing sparks what smoothly stretch into glowing strokes of nourishing light deepening and refilling all body cells nerv endings reporting yellow or pink blue and red sensations to heart and brain the first day michael and suleiman and li arrived in paris they

spent looking at the experiments what luoma was telling them this or that bit, watching some recordings of previous petri dish film recordings but nearly half of it they painted and fantasized on this light travelling within body theme the goal seemed to become finding a more aetherical way as for electricity being generated inside both the human and the android body how to get there ....

by recognising what possibly the body allready does when in relax and or enjoying mode... and by analysing what happens in the experimenter researcher feelings or body sensations while drawing inner mental guided emotionally fuelled imaginations the three of them were being donated some money from the three dancers what arrived a day later fernando, ava and rumu were living in the

alps of middle europe, enjoying the regions the lived financing their appartement rent plus providing money for food and clothing.... as they did not eat a lot mostly oat and raw fruits and vegetables what they got for free from the farmers where they occasionally did dance practices... they could save up each 2000 what they used about a fifth to travel to paris by train leaving 4800 michal,

li, suleiman, fernando, ava, rumu, luoma were looking in the net for 7 headsets and upper body sensor ladden textile what would allow them to record their brain heart blood pressure activities the following day the 7 sets arrived what fired up the researchers acitivities another notch them now recording via voice and sometimes video what they dances what inner pictures they painted and what skin touches felt

how ... with the time logged mental acivity as well as heart beat and puis recordings, there would be mountains of correlating data what an artificial intelligence as well as the human observer could search for certain rules and laws of what stimuli and or imagination results in what colour intensity.... that eventually one day allowing both human and android to visualize an avocado and really feel

how its natural good fat will deeply enrich the organs and the blood with good nurriture... without it being grown or eaten... just with the combination of the recordings their conclusions... that many times one had this sort of touch and it resulted in that kind of heartbeat .. this many times one thought about a certain shape and it resulted in that kind of breathing pattern... could there be a way one could

touch each other o oneself what would bring the satisfaction to both touch receiver and giver... the satisfaction of eating a tomato while having a neck massage.... the dancers were trying to dance pumpkins and onions or flower scents... luoma was bathing and sharing her skin with whomever of the seven wanted, also li found herself being quite often in the now built pool enjoying both quiet meditational

settings as well as the sexy ones looking back at this lines of text... not with reading them but how it feels now having written them., a thinks of ...matschig, teigig, no prezise and dimm, missing the central part... but now there is an idea.... ascende and perma were calling in from padang ... out from the jeep what will bring them some couple or hundred kilometers into a primary forest with tribes

living from it they were very happy to hear about the seven in paris doing a complete new branch research for the android project... mass data collection and intelligent mining analysings what could give the androids artificially intelligent processing head a glimpse of what movements touchs smells inner paintings visualisations could heal ... hunger li said to that description of what they

were gathering coherent data for., hunger for nourishment, hunger for sympathic love, hunger for understanding... it is no only the question... how can a human being as well as an android tap into the probably enomously vast oceans of cosmic raw energy and use it for good body heart brain fuel ... but the other question... is there one or many parallel spaces where this mechanism allready are

understood and all participiants of the game to live are applying it like we do breathing automaicly in this special bend of the reality spaces16- autobio or a reflecting on previous happenings in this storylinethere are now 2 possible continuations... one to go with perma and ascende to sumatran rainforest trying to be a fair witness to how the two industrialised humans get in a respectfull contact with

a or many tribes what counciously decide to stay away from machines as much as possible and remain in close contact with earth trough collecting the forests offerings a does favour himself to be a vegan person who tries not to participate in animal encaging as much as possible but a would never deny a native person to hunt an animal if there was a need for the tribe or himself for meat

mmmhhh... but then when exactly starts need and when ends the comfortable but not necessary area a believes that every person who participates in enslaving animals or hunting them... needs to deal with this consience question... when does one really need the genetic informations of a fellow animal to heal oneself from a memory loss .. or positivly said... if one can jump like a gazelle and be

that attentive as to other animals movements and sounds... one would eventually find access to the antilope gene pool by imitating trying to behave like it another precaution sentence or more to naming of people and places as with paris and sao paolo i do not find it problematic as there are millions living there so the chance that a catches a real persons lifeline meaning one sees a real

existing persons life in form of protagonists like michael, suleiman, li, fernando probably mundu too is a widely used name ... but ascende perma nila luoma ava rumu seem to be quite unique so a would actually change edit these names and say mirael to michael andoref to fernando luoi to li simhoan to suleiman as for the tribes, it feels to a like a risk higher than necessary to perhaps have glimpses

of a real living person if one would find the right name of one member of a tribe a does not want this connections of fantasy with real living persons as it could become a projection like a reader of this texts has a friend called li or a famous person is named like suleiman and the reader does not feel to well reading something with a name of a very respected person doing things what the reader thinks the

famous person would not do... following this a could only metadescribe it like without naming the forest and samewise not naming a tribe name this could apply for nila in the amazon, mundu in the congo bassin and perma ascende on sumatra thisway there seems no complications arise out of storytelling when only very few real names of places and people are being included in the fantastic

writing mmh.. eventually even paris, sao paolo, sumatra padang, hawai and canary islands could be changed around into rispa, olopa aso, matrasu dangpa, aiwah and racan if a does now this renaming he senses a devellopment of the story into more freer concepts of how human animal plant bodies can intergrow into each other without much manipulation and cutting but with loads of time and fun gayety as

to vibrate the place up into the uplifting jet streams of the utopian cosmic thought train a knows of himself to be a bit lazy when mixing up informations of real life technology what really does something better for the human needs than before every motor what uses less fuel and or treats the fuel with a more efficiency... is welcome as the billions of people starting to now have cars and motorbikes, fridge tv

and so on... the loads are becoming higher on mother earth ... following this one can possibly understand the android research project also having the direct cellular becoming more whollistic evolution of the human being part with here a kind of half magic esotericly wishpower motivated cell remix in life skin tissue the other half perhaps some bits of science but mostly half-intelligent storyfilling

mmmhh a says now he is trying to bulge the stories up as to smuggle in his real life concerns... but then there is real rainforest in many places on the planet dissapearing at that moment when he writes fiction... how would a not want to write one most beautifull and wise and humorous light and in a gay mood... piece of text what could eventually inspire a half-rich person to donate some two millions

to him as a hommage to the last 15 years of his writings fotographing filming ... yes a would take it and most possibly try to do something world changing for the better with it but of course this not being the reason but why not a possible consequence having talked about some small parts of names and the possible influences of fiction writing on real living persons... but then, exagerated also17-

mirael luoi and sulmanei in rasepmirael luoi and sulmanei in rasep oh the names do not fit yet but this could a source of humour the names slighly changing some letters around of the previous what influence then has fantasy name giving onto the devellopment of stories... it is starting to rain at a s forest relax place and getting colder... nila in paluso aiming to get to the mazaon forest

mundu in ocong bassin and ascende perma in the overland vehicle four wheel drive car towards the primal forest of trasum having landed via aeroplane in angpad ... the three expeditions have had the desired outcome with local living tribe members accepting their presents of each 60 000 what was used to buy the title to their lands with the nation states what claim to have autotithy over this region

mundu built a very simple experimenting place where anyone tribe member or eco tourist could continue with the peacefull cell evolutions and inner mind drawings of how an human animal plant enhanced android could nurture itself from the visualisations of body sensations cell signals and the light effects of mental wishes onto the body18-nacabsia being warm inside now writing at the laptop ‚Ä¶how can he

get out of this autobio trend now in full speed entering the fantasy fiction parts ‚Ä¶ mmmh.. is it a guilt complex having not told a brilliantly colourfull tale around how the visits in the rainforests were ‚Ä¶ or the confusion about how important are names ‚‚‚ would it be better to write the commonly used reality names or should fantasy names save the disconnection of fantasy to reality ‚Ä¶ but wait,

disconnection ‚A¶ what trip of fear is that ‚Ä¶ is this not about growing softly into each other, understanding, enhancing, getting wholesome and handarmlegssome humanimalplant element enhanced style ‚Ä¶ yes it is, but then ‚Ä¶ how many readers will that text have who are fuelling the effects of the story onto reality with their own recollection of what they wish to the world to become better ‚Ä¶

how many readers might this text reach who could eventually being led with the namings to project some emotions and inner pictures towards a city like paris, risap, rasip ‚Ä¶ oh yes, it is in full swing, the blabbel like i would talk to the baarkeeper when being drunk and having no one to tell him how i am stuck in my writing, facing a wall of sober cautionairism luoma, donanref, ava, umu were mostly dancing

around the experiments aeroponics, bioreactors, petri dishes and bathing at times in the pool they have rebuilt into a semi-natural one with now still having one classical bathtube what was able to pipe freshwater in and release used water in the sewer canals of risap luoi was learning fast from luoma with her skin being merged with ascende and perma ‚Ä¶ luoi too was after three bathing meditation

sessions with luoma enabled to soak up the sun and photosynthesise the light into nutrition ‚Ä¶ mirael too was joying in the bathing fun while manulsei was actually the only one still using the rasip city water as to not become changed too, he somehow wanted to keep a strictly human genetic of course he kind of wanted to join in the fun the others had bathing together both in meditation as well as in

sexy moments, but he felt allready blessed enough to be here to see his friends metarmorphing so he was actually so excited by his fellows growing into completition, that he found more and more evidence as to why stay human ‚Ä¶ not actually fearing that the process might be having some negative side effects, why should that be ‚Ä¶ as there was no synthetisation happening and no forced separations

or pushed fusions ,A¶ the processes in the rasip apparement laboratory went slowly, over days, on the cellular getting to know each other and try to intercopulate till a possible recombination could be found or no synergy was possible mirael and donaref were wearing their body signal recorders during the 5 times they bathed and at the fifth time became plantanimal cells enhanced the database of

correlated recordings of what happened in the outside with audio and video capture ‚Ä¶with what happened inside via the body signals recorder sensors ‚Ä¶ the database archiving all these connections ‚Ä¶ would eventually enable the artificial intelligent software of the desired android ‚Ä¶ the database could eventually enable a self learning and itself software and hardware wise

improving tuning ‚A¶ to understand the reasons for hunger or otherwise said how a recognition of the benefits of touch, smell, sound, visuals can send light to ones heart and stomack‚Ä¶ or how a pretty picture of oneself at the pure sandy sunny ocean beach ‚Ä¶ cohowuld eventually warm a person suffering from being exposed to cold weather for example ‚Ä¶ one of the future android eventually

being asked to descend thousands of meters down to the bed of the oceans to close a leak where some oil drillings have caused a mess ‚Ä¶ there it could be very practical if the android could imagine itself being exposed to the sunlight ‚Ä¶ or any other scenario what could balance out the cold and dark sensual inputs he would get down there the documentation of the whole project since perma has moved in with ascende

at the appartement in rasip, has not been produced yet in a form what would show some serious order and continuosum ‚Ä¶ as there were a couple of side themes what asked for jumping at them when they came in to the discussion ‚Ä¶ or one experiment reacted to the evolution of an other petri dish culture ‚Ä¶ the dancers saw via life microscopic projections onto the floor the changes

of their skin cells how they grew into each other ‚Ä¶ the love makers in the bath could look up at the ceiling to see their skins being enhanced while bathing in the pool what was alife now with all kinds of organisms growing from petri dish grown samples and microalgae, body fluids ‚Ä¶ all fluids and samples of cells were being contributed with the most possible gentleness and soft smooth handling,

joy and fun being the lubricants for the cell types to grow into each other as the visits to the rainforest areas were happening in mutual understanding and dignified styles, ascende and perma were not longer than a week later arriving in nacarsie islands where perma had her permahouse or permahut, her garden following the notill but mulch principle ‚Ä¶. nila having been allowed to donate 60 000

to the buying of landtitles for parts of zonama forests, she wanted to join ascende and perma after she spent some days with friends in the paolosa appartement introducing them via webcam to their parisian fellow researchers ‚Ä¶ as not to complicate the allready too complexly written story ‚Ä¶ the author, naming himself ‚Ä¶ a‚Ä¶. does not intend to come up with some new 5 or more names for the new

researchers in paolosa ‚A¶ nila arrived at the hut of perma about a week later than the two who have made use of their new found quiet and silent slow lifestyle on the island with no camera and experiments to look after or to look into and produce some externalisation ‚Ä¶ while mundu was successfull too in the nongco bassin and flew further to awahi where he intended to start at first

step finding himself a situation where nature animal and plant realms would share their spores fluids semen eggs branches saliva urine leaf dew with him in charging moments of over logical super e motional instances ascende, perma and nila stopped recording, phoning, chatting electronicly for a while with themselves too talking less and less to each other, but listening to each others

moans of pleasure and relaxation when lying beside each other in the sun or when swimming in the ocean, jumping of a rock into the water, dancing at the beach on sunrise and sunset, picking the berries and pulling carrots out of the ground ‚Ä¶ they lived a simple life for about 4 months ‚Ä¶ when mundu and his two awahi friends were progressing quite a bit into building a field laboratory

what was not far away from being as functional as that in rasip ‚Ä¶ but of course here was the air a lot better than in paris, the flow of it as well as its molecular content ‚Ä¶ the roof and walls of his laboratory had big window glass elements with the bioreactors of microalgae soaking it up very thankfully as well as the inhouse tomato bushes and cannabis mini trees .. oohh‚Ä¶ amtoto red

squishy fruits the size of a fist ‚Ä¶ making a deliciuos utschkip ‚Ä¶. haha, very funny ‚Ä¶. but perhaps it is ‚Ä¶. nacasib growing all over the place boom boom bolee19- mirael manulsei and luoi were returning back to their documentation effortsof the first few weeks when ascende and perma changed their skins into multispecies onesafter three months of wearing the body signal recoders

and correlating audio video recordings, they as well as the dancers and luoma were now most of the time working researching without so much recordingthe dancers and luoma spent much time now with the integration of their new cells and the abilities it brought for their body sensations ... the seven still continued to draw how they felt their inner light was travelling inside their bodiesascende

perma and nila were doing not too much neither but mostly enjoying themselvesmundu was quite busy going around on awahi to enjoy smooth encounters with wildlife, collect urine and feces of wild animals, feathers and skins being given to the environment in purposefull actions... there were sometimes acts of violence involved around the body parts mundu found, bu he asked himself if there was

hunger involved as the motivation for a killing... the remains might not be that negativly charged compared to for example a researcher capturing a live free living animal in order to take live cell samples of it without its consentmundu did cultivate much of the cell material in his field lab on awahi, some of the cultivated remixes or several cell types having grown into each other the slow and peacefull way,

some of these cultures he did send to risap where luoma and the dancers nandoref ava rumu were bathing with them other parts of this sendings from awahi were cultivated in the petri dishes in the city appartement of rasip under the tireless attention of mansulei who was now still not bathing with the others in the life rich semi-natural poolhe stayed strictly human, having a sober and most objective view on

the metamorphosis what happened both in the petri dishes as well as with the human experimenters themselvesnow five months after perma and ascende started to change, there were hundreds of successfull animal plant , plant human, human animal.... cell intergrowings both in the petri dishes as well as in the semi-natural pool where all except mansulei bathed regularilymirael and

luoi were sometimes swept away with emotions and inner light journeys ... when they were done with the documentation worklooking at it from a bit afar, and when reading the comments and suggestions of the several dozen follower of the research, the ones watching both the microscopic camera live streams as well as the dancers bathers and documenters enjoying and

working... the feeling arose after an other month like this... now a half year the research ongoing... the feeling arose as to put another step forward... perhaps presenting the documentation as well as opening access to the many thousands of live recordings both micro of the petridishes and macro of the whole appartement.... allowing a wider audience to share the gathered material so

farthere was also all this hundreds of hours material audio and video recordings correlating to biosignal recordings with the formulated intent to provide a database for visualising the nerve signals from snsory inputs into a truthfull manner and possible find out how internal imaginations affected the body directly...it was at this time when both the fans of the research as well as the

contributors felt it was ready to go one step more public.... that ascende perma and nila were contacting the appartement in risapthey were planning to stay a bit longer offline as to deepen their cellular growings and keeping their focus totally onto their encounters with each other and their natural surroundingperma ascende and nila were listening intensive to mansulei when he tried to

give a brief overview what happened in the risap city appartement during the last five monthsespecially happy made them to hear how mundu was able to culivate the animal material he found with plant and human material in his field laboratory in awahithey agreed that it would a good time now to present all the so far gathered data both documented and analysed as well as the uncommented raw life

streams .... for free to the general public with no restrictions attached as how everyone could use the insights and methods found by their researchmundu was also calling in at this moment, him too being still unchanged like mansulei, not because he really did not wanted to become multispecies ... but he felt attracted by the mindset of mansulei what consisted of an unexcitedness and cool

detachmentwhat still had a warm glowing sympathy for the overall goal of the project to allow humanity to evolve into a more complete a more whole beingmundu too agreed on the plan to present a compilation of their gathered data and successfull cultivations to an even wider audience, without paywalls or asking for contributionsbut... he was emphasizing in the discussion what how to

present... there could be mentioning of what kind of magnitude of finances could further this or that branch of the several types of research they were intoand directing attention onto the various fields they have not yet ventured into for example the build of the skeletoneveryone agreed on that too so the next three months went by with mostly mansulei luoi and mirael producing all the documentary and

overviews with the projections for future milestones to be reached with this or that much both human researchers time investment as well as with this or that much financial backingafter 8 month since perma moved in to the rasip city appartement, mansulei as the leading author together with his documentary assistant presented a 300 pages paper with many links to online video and audio

recordings, body signal recording sets ...it found a overwhelmingly amount of interest both in the acadamic field as well as with the future enthusiastic laymen and laywoman or more gender neutral said ... the ones who hoped utopia would once be able to built on earth with the sensitive use of technology, balancing esoteric with exoteric knowledge to end the killingmoney began to pour

in with small amounts but many millions contributed, unasked forsome popular science journals and gadget news sites were picking the report up and celebrating it as of its both entertaining and fantasticly inspiring contents as well as lauding the professionally scientific conclusioning comments descriptions and well named links to the various types of audio/video/signal data setswithin these

millions of fans who sent some 10 to 100 money were also a couple of thousands who were asking how they could participate in the research, if they could get some samples sent to them for a bathing upgrade and or cultivate the evolved cells at home in petri dishessome wanted to visit the rapis place to enjoy bathing with luoi luoma ava rumu and andoref...so it got busy in pasir .... mirael

and mansulei found their work to be done sufficiently and wanted to go back to south arimca to see both places the house in palosa as well as go sampling in the rainforest places ascendes money helped to securethey left one day after the report was presentedon the second of january 2022a week later a letter arrived in paloso of a famous enterpreneur who made several billions with future benefitting

technologies(no mentioning specifics here as not wanting to assimilate a real currently active enterpreneur with this fantasy...) but let us assume this visionairy enterpreneur would have built several multistorey high vertical farm buildings in major millionpersons cities all over the globe selling the produce at a little lower price than at the local marketthe letter was having a proposal in it ...

that mansulei and mirael would help him build up a 100 million investment plan as to commercially produce andrdroids what would be sold for reasonable priceshigher than what the researchers have proposed but still under ten thousandalso they were able to use all of the research and intellectual data of this venture in any way they likedmirael liked that bit with being able to use all

the gathered knowledge gained with a abundantly prefinanced roll out of products... while mansulei was cautioning that most of the necessary research and construction samples materials were not yet here in the present but depending of the engagement of thousands of researching hours waiting to be contributed in an equally leveled mind fashionthey wrote all that the same day in a letter to

the entrepreneur, answering with a fundamental yes they would love to help roll out hundred thousands of androids for no more than ten thousand the piecebut the necesssry research till it would be ready for production could well need 3 years for example with 50 000 research hours invested by perhaps 50 to 500 researchers.... with that being the question mirael and mansulei asked

joho the entrpreneur... how could we find these fellows and will they too be allowed to build on top of the research ....the next day an email came from joho...i am so happy you are going to help doing this... everyone working on this project will be allowed to use all the data in a most open source way... i feel that wr do not need three years but a half one when 2000 researchers will join us.... me alone i know

about 300 who will love to work on this especially also as it has this human evolution success what ascende, perma, nila, luoma, luoi, andoref, ava and rumu have shown ...mirael and mansulei felt right about that offer of joho, they called ascende and perma on their secluded permaplace in the ancary islands ...ascende was crying tears of happiness when he heard of the bold plan

to produce hundreds of thousands of androids in such a near timeframe and such a an affordable price with all the intellectual material open source available... he and perma gave mirael and mansulei their blessing for this venture and thanked them from their very heart from having reported so whollisticly well on the groups researchmirael saying then... do not say goodbye to intensly, we will

be back soon to crossfire the roll out of the 2000 euro dollar pound android for the masses, we might even find ways how people could grow their own android at home...perma now jumping in... yes, a kit containing our advanced 3d printer what gives enough time for flesh and bones finding their very own structures and building microcomponents to stack assemble with each other20- butterfly and

batbutterfly and batubretylfabtnilai was asked by mirael and mansulei if she wanted to join their management team for the 100 million android productionsell 100 000 at a price of 10 000 or 200 000 at 5000 with each costing between 3000 for the 10 000 model and 2000 for the cheaper versionnilai was in as she longed for some younger company as well as she wanted to meet butterfly

as well as bats in the rainforest of zonamia she would ask them to join her in her body journey to human animal plant completionher condition for the working with mirael and mansulei on the commercial rollout was that she would donate some of her cells what she could grow on and in herself for 3 million what she would donate to the native tribes some bigger pieces of rainfoest could

be securedthat was cool with joho the investor, he liked hiking in the kiroc mountains and he was delighted to have an under 30 year old providing cells as matrixes or matrizes after which the androids could be built uponnilai went with a boat from nacary islands to pasin and from there took a flight to palosa and again there taking the boat to get into zonamia forestsoh but wait it is lembe in south cerima

where she took the boaton the way with a boat what had an electric motor fuelled by photovoltaic panels on the side and on deck of the boat she met thousands of butterly at day and hundreds of bats at night allowing her to understand more and more about themone night … nilai went early to sleep after having eaten some freshly harvested rainforest fruits she collected in the forest at

the side of the river... stupid it seems this namings ... descriptions lacking vividness ... he please a stop interjecting your critic autobio wish thingie... but hey, how am i the author as a and whatever so cruelly taking away the attention away from nilai lying on deck of the boat listening to the evening forest serenades mix.. puuuhh... made it again upwards... at around 10 in the evening or about

after sunset 2 hours later or half an hour, the bats she saw usually hunting in one or two meters distance from her were hunting moskitos closer now at ther nilai was so relaxed and thankfull for the bats to bless her with that trust saying we come into your reach of arms and feel you are not gonna harm us... she smiled silently lying on her back sometimes with open eyes sometimes with eyes closed concentrating

on the air pressure changes or winds she felt on her face as a result of a bat flying above her in 50 cm heigth catching a mosqito what was aiming to suck nilai s bloodthe bats were kind of an organicly moving mosquito netone could think of a possible fluid like saliva or something of the bat dropping on nailas naked arm where her allready chameleon and plant enabled skin would soak

up the dna of the bat and created an access to the cosmic bat data cloudso is a an utopian what brings dystopian self critic or auto bio stuff in to get some other story colours than happy pink and violet flame seriousnessnilai had some 50 000 of cash with her and 2 950 000 she could transfer with her satelite connected smartphonewhen she arrived at the tribes to gps fotograph borders of what

they understood as their hunting area for later aquisation of titles of the land with the national states surrounding the forestnilai and many tribe members felt doing the wrong thing when she transferred hundred thousands from her account to either a tribes account or directly to the national governements treasury departementhow much poor people living in the slums of megacities

could be helped with that money.... but still they did and thought by themselves... this money is not from the earth or even if it is stolen trees from her and secured with stolen gold ... this money is built on weapons, built upon the will of someone to use violence to defend his loot from plundering the earth... not that the author would live a feather light ecological footprint ... ah yes here the link this

money is not soft and repectfull enough so we can give it back to you with good consiencewe will make better cash ... both nilai and the tribe members were singing out in a bit sad but also happy tune, weird harmony but let us fly back on the wings of the butterfly can one imagine the perspective just in this moment when the reader sits there in a restaurant or cafe house and reads this ... oh is that

now a shizofrenic show or mad writing to find out how the author can divert himself from what he actually wanted to tell like playing chess afainst oneself who talks more winds wins... ah no... the cellular evolution is one focus here ... bat gave saliva what nilai chameleon plant photosynthesic nilai analysed sensorically and on an overself level ... like when one really lives in a moment and the core data

center fluid mellow lovehoney of prime essence of cosmic beingness... a fraction of a second in a kiss... or an erotical orgasm ... a moment of oneself having surrendered the control over oneself to the greater we of just this moment ... before and after that particle of a second everyone is feeling in a majority ot control over oneselves actions ... it could be that a has this

fear of a nice story badly narrated so he goes into autobio reflective ego psycho doc hour mixing with a potentially superb storyline ... nilai thanks to bat and butterly joyfully donated essences was enabled to start the production of many hundreds of thousands of android machines with selflearning artificial intelligent software who would by the way improve their own source code plus

hard fire soldering their electrical cicrcuit motherboardsbut wait ... was not the plan for the android be non metallic and wet and grown like bone and flesh ... so let us forget a just described that outdated picture of an android soldering around his brain platines... nilai gave hair and saliva and urine with also her monthly period what with her was not much as she was not really looking forward to

give birth to an offspring these days as well as not needing so much cleansing as she had so much fun all day travelling the primal forests ... the wild animals trusting her... ah yes how about a butterfly day guided visualisation.... now i really felt pain in my hands after having typed all this text holding the smartphonea switches over to his laptop where he too knows that he will get pain from his palms resting

on the batterie heated laptop parts ,Ä¶ so actually i should make a full stop here ,Ä¶ and look at this insight ,Ä¶. after having wirtten about 2000 words or more the body starts suffering from being in contact with harddisks and batteries screens etc,Ä¶but then again,,,, do not lose the story ,Ä¶nilai sends small to big containers regularly to paolosa where the fluids are being analysed chemically and

microsopicly and dna is being extractedi can not write that the way i want am i posessed ‚Ä¶. aahahhhahah ‚Ä¶ little horror ‚Ä¶ but no, really i feel tired and pain but again ‚Ä¶.nilai and the butterfliesnilai was so happy she could travel along the rivers bring people the money to secure their hunting grounds and while travelling she got into deeper and deeper

understanding of how the bats were the butterflies were kind of taking longer as one can imagine ‚Ä¶ as the human being has quite a history of slaugthering and massacring each other in unnecessary conflicts, this strong traumatic behaviour is deeply engrained in the cells and the butterfly smell this cells evaporating so they do not want to be too near to that kind of poison ‚Ä¶. mmmh‚Ä¶ bullsh.. what is

bad on a bulls shit ‚A¶ nothing ‚Ä¶ it is excellent fertilizer‚Ä¶of course are the butterflys also eating something so they would have compassion with the human beings having eaten each others soul in their useless conflicts ‚Ä¶ ha, that hit home ‚Ä¶ we are our only devils ‚Ä¶consuming each other in hate and concurrence ‚Ä¶ stupid ‚Ä¶ so ‚Ä¶ the butterflyies could eventually be both fairy like

and pure joy supporting the material plant bodies to grow well into the light ,Ä¶ and also fruit sugar drunken swingers enjoying sexuality ,Ä¶ mmmh,Ä¶ lost the point again ,Ä¶ have to jump up to read back ,Ä¶ ah yes no again a total crash of romantic energies building up the preparation of the scene of butterlyies kissing the girls cheek in thousands ,Ä¶. yes , why not ,Ä¶nilai and the butterlyies kissed at

around the 200th day after she started to travel the zonamia on her boath it took the butterfly effect that long to come home from the world ‚Ä¶ the butterfly collective wanted to be sure that the work nilai was doing for the android flesh and bone construction was a good one ‚Ä¶ so the butterflys in the zonamia telepathicly or wing vibrationally communicated with the nearest butterflys on the

android production site in gneipk ‚Ä¶ ah no ‚Ä¶ the province name is otherwise ‚Ä¶ forgotten ‚Ä¶ does a can find the point to illustrate the picture of oneself seeing the universe like surfing on the colour chaning fields of microraster fields on the surface of butterfly wings ‚Ä¶ oh it hurts so much my hands ‚Ä¶. your own fault why do you want to fill your fantastic story with all that autobio stuff ‚Ä¶ is not

nonsense, is relevant but fairly distracting the romantic reader whom i tried to lure into this story with the title amour amour in paris ‚Ä¶ but then again, i changed to rasip and trying to make it complicated and unnecessary complicated ‚Ä¶ mmmh‚Ä¶ is a having a war against his body, making it suffering by typing unncessary words and annoying the reader ‚Ä¶back to nilai ‚Ä¶the

butterfly collective needed 200 days to learn to trust nilai and the android production process to this degree as they would give her a necessary big amount of their juices in order for nilai to make total access to all butterfly beingnesshere is to understand or a possibility arises for the author to get some of his inner connections together and show himself to what he was able to dream of

publiclyafter 200 days nilai and mariel ‚Ä¶ mirael ‚Ä¶. and mansulai ‚Ä¶ have spent 3 million on forest securing, 17 millions in the labs of paoloso and were ready for the 80 million production cycle what would happen in the far east of the globe‚Ä¶ if one looked as the center being eporeuthe hundred thousands of highly capable androids were sold within 10 days ‚Ä¶ bringing in 200 and more millions

joho the fincancer was so happy with the work of muriel mansulei und nilai that he donated them 50 millionsbut still there is the picture missing from the butterlys kissing the girl nilai while she was thinking sitting looking at the river at daytime ‚Ä¶.. a will leave that to draw to the readerin these empty space one could try to draw it ‚Ä¶. if a reader would want to do such a thing ‚Ä¶ but again ‚Ä¶ thank you for reading

and sorry for i am spoiling the nice moments and be so good on the nasty ones ,Ä¶ ah,Ä¶ blabla bla ,Ä¶ i am good guy am i not ? ,Ä¶ some small porn writing what everyone has fun in it ,Ä¶ what does that hurt or how could that be a bad thing ,Ä¶ perhaps this autobio in between switching several perspectives such chaoticly deserves more ,Ä¶nanana, what is that for an attitude to serve the

reader ‚A¶ meymey mey ‚Ä¶infantil .. eventually ‚Ä¶ but how not wants one be a butterfly child mmmh‚Ä¶. bat and butterfly having a child ? very interesting parallel story dimension ‚Ä¶ how about nilai having witnessed in the 200 days how in the twilight between day and night and night and day the two species meet shylish ‚Ä¶ purpose being to conference with what they sense happens with the human beings who

search the wisdom of the bat and butterfly tribes to reconnect withperhaps they mated ?or it went more like a very elegant fly in between dance orchestra of grillen accompagnied and monkey cries und birds songs ‚Ä¶each one after ones gusto in ones internal imaginationswith that i leave the typing board and say thank you for coming with me to this place in space and time21- growing

300 thousand androidswhile nilai traveled along the zonamia river being studied by the bat and butterfly swarms for her and the android productions process worthiness of the animals contribution... mirael and mansulei invested some couple of millions in high tech machinery laboratory equipment not only did they work in former freak friends group paolosa house but also bought

some several new places where they provided good income for biochemistry and microbiology students of the citites university... also biomechanic research was a huge field where dozens of new participants were applying to be part of the research from all over the worldas joho had full confidence in morael mansulei and nilai that they could coordinate it all on their own, and nilai busy with doing all the land title

securing for the native tribes living in the remaining primary rain forests, the two men were most of their time spending in the 200 days of the research to overview all the connections with what the around 1700 researchers here in paolosa and some 300 at other places interchanged their findings and built upon each others worksimilar to their acrivities in the rasip

appartement, they were mostly documenting, here and there providing a suggestion but mainly trusting the highly motivated young students as well as the other more senior volunteer participants who either traveled to paolosa from far away to help with this very first creation of such a biologicly near to nature grown androidthe budget of mirael and mansulei was 20 million, with 3 being

invested for nilais forest land title securing, around 5 got invested in tech equipment, another 5 in salaries and around 6 in buying land as well as building houses together with the people of the slums of paolosa.... it was such a pleasure to witness how the local people were helping the project, of course them building houses for their own living was part of the salary... the project provided at its

height of prototyping research activity living and working resarch lab housing for 1700 researchers and 4000 people who built earth material based natural houses, cooked, transported cell and bone and flesh pieces between the hundreds of distributed places and helped in many assisting ways to the researcherssome of the places the two bought with the 6 million allocated for

lab facilities were not really in the slums but in the village areas near to the town the villagers were happy to sell some of their land to provide living and research places for city people as they have heard how hard it could get in the city to find decent employmentsmirael and mansulei too spent a good amount of time talking to everyone how the life of the people could change for good once the research

would have been finished, the assistant local people would not only be able to live in the houses they built for themselves but they would be given the titles for the land on which the houses stood as a thank you... one might ask ... why did they only got the ownership of the houses and the land after the research finished... is here a kind of fear involved that if given to them before the end of the research phase,

that they would stop assisting the lab technicians, microbiologists, biochemists, biomechanic and all kind of other researchers with their analyses, growing of organic body materials for the soon to be mass produced highly blending into natures way androidso let the author... a.. change this around... mirael and mansulei were able to finance living and working

research spaces for 6000 people with just 6 million .. what was only possible with the villages surrounding the paolosa megacity solidarising themselves with the project selling land for lower than usual prices... this was also greatly helped by the promise of mirael and mansulei that once their research project was fully accomplished and joho went into productions with hundred thousands of

highly organic built androids in the far east... why in the far east one might ask... why not to build the androids just here at the research facilities using the massive abundance of energy the south necarim region had from its traditional sugar cane plantings... so changed the production setting would be ... joho agreed ... 50 000 androids selling for 10 000 each costing 3 thousand to grow

with the completely newly engineered 3d printers what gave each layer of bone and flesh tissue enough time to find its inner wantings how to best grow together with the previosly laid down layer of cells… 50 000 androids would be grown right at the research facilities and the other 50 000 of the prime model still as previously planned in the far eastmmmhh but what about the 200 000 being

previously thougth up to be sold for 5000 each while costing 2000 to grow... joho felt so positive about the success that he actually did donate 50 million to the group of friends centered around the rasip appartement... thanks mostly to their sharings of pioneering research the whole enterprise was possible... so he gave the 50 millions to the group of friends when the research was

well 100 days going on strong, naila s newly bat enhanced dna being successfully applied in the lab tissue growings... the friends group at that time jumping in with their own 10 million what got donated by hundred thousands of unasked for donors from the fans of the rasip appartment research... joho was happy to see the group of friends... ascende, perma, nilai, luoma, mundu,

mirael, mansulei, luoi, nandoref, ava and rumu sending him a beatifully hand written and painted picture ..... kind of visionairy mind map... telling him how the group is going to produce 200 000 economicly grown android models and distribute them for free first to everyone who has helped the commercial production of the 100 000 androids selling for 10 000 each... so the farmers who sold

their land to provide land for previously slum habitants dwellers... as well as all assisting and researching and growing the androids .... all 6000 people in south namrica region as well as around double this much people in far eastern nachi ... were looking forward to having the very first grown androids for themselves as companions what who would make their future economic survival much

easier than beforesame as in the paolosa region, the production facilitites in nachi were also built with natural materials using earth clay and rice straw mostly... it all happening in a slow but steady build of a decentrally orchestra... the center being the latest updates of the several cell and bone and nerve and muscle tissues what were available to all the hundreds of small living and 3d printing

arrangements in the two places... one could try to imagine seing 18 000 houses measuring 50 sqmetres... with around a third having live tissue 3d printers in them and small bioreactors petri dishes etc... so everyone of the 6000 ready for production places would be producing 50 androids ... nah.. wrong calculation... a forgot the 60 million additional now available capital for the goal of 200 000 economy

android models... it was mundu who got chosen by the group of friends to help mirael and mansulei with the additional investment into buying land to build living and working space for another 24 000 android printing earth huts and another 48 000 assistant living room earth buildings... so there were at the end of the 200 days nilai traveled on the river of zamonia gaining the trust of bats and butterflies... 30

000 small scale places not only in south necarim and the far east nachi land but also in the middle roepeurian region and on other continents were ready to grow 10 androids each... needing a week for each one to grow in a sustainable waythere sure got some numbers being juggled up for example where are the 80 millions joho had reserved for the production process... ahh ...50 of that he donated to

the group of friends who made themselves adding their own 10 millions the donation of 200 000 economy built androids possible... leaves still 30 millions what can backwardlz thought be imvested to buy materials and estate to set up the android grow houses, printers, bioreactors, solar panels and all thatas for the kind of investment they chose mostly single person or small groups collectivly

organised to supply the tools needed for the growing, thisway again supporting a tradition of most independantly working and thinkering sort of unique craftpersons, people who believed in their products as themselves they understood all the logics of their setup and working priciples22 - looking back in decent placidnesstime to look back decently relaxed how the others of the

friends group have lived trough the 200 days of the commercial prototypingluoma nandofer ava and rumu were having guests all days and nightsmusicians dancers painters jongleurs and also writers were fascinated of the rasip appartement and its delicate and balanced mix of experiments petri dishes bioreactors hydro- and aeroponic plant grow installations and of course the pool now growing

plants in the water and becoming more alive with each bath people enjoyluoma was under 30 as mundu and nilai, while nandofer ava and rumu counted over 40 summers in their livesthe four of them built something like a gang together in the weeks since mirael and mansulei left to paolosa... where did luoi went ? to the nogco bassin to have an original authentic meeting with the wildlife ... if a remembers

correctly...the four what had the last word what was happening in the risap place were organising themselves in a chaotic consensual way... was a guest announcing him/herself all four had to agree on the person staying as well as to how long ... what depended on how beneficial for the appartements aura the guests activities could be perceivedhundreds of people were bathing with

the four dancing jamming and within hours discovering that their skin upgraded organicly to photosynthesis ability and some also got the chameleon thing... weeks in the 200 day prototyping nilai sent also some samples to the risap place and it was partly added to the pool but also cultivated in petri dishes and microalgae bioreactors where people drank the nourishing drinkit was no

surprise for luoma and the other three to feel her bat counciousness soon after having bathed in the nilai bat enhanced cell in the pool and drunken from nilai bat urine nurtured microalgaenandofer ava and rumu were quite eager to let themselves grow some bat wings built upon their arms... and grew they did, with each one different as by the others possibly on the experimenters imaginations and body

type... not long before they flew some meters on the balcony one night... being reluctant to do so in greater public as it may scare fellow citizens... when the multiple painters visiting were painting of the four transforming this way and writers were blogging about it publishing articles in the netmagazines, another surge of attention came to the rasip appartement with hundreds of millions

watching the live stream of the appartementthis stage of human arms growing themselves individually different shaped and sized bat like wings what allowed actually allowed to fly some meters high and far, that triggered the public interest enormously... as nilai was sending news to the rasip appartement that she was in contact with the butterfly hive mind asking for access to its richness... and it felt like the chance

would be given sometimes in the next weeks or months ... it depending on the rippling back of the android growing research project... the four were motivated even more than before to keep the energy of the place in a most symbiotic and comiracling statethe visitors guests too were showing a highest degree of original authentic contributing most all of their being when there, in these times most beatifull

improvisations in dialogues songs dances and massaging each other were being cherished by millions of web watching fans ... for free and with all the intellectual and visual audio content being given open source no rights reserved everyone welcome to reuse remix ... hundreds of hours were being recorded and uploaded to other streaming sites from where again more internet traffic

followed.... the popularity of the bat wings enabling rasip cell experimenters lab was at an all time high with approximatly a tenth of global human population feeling a genuine sympathy for the project and regularily joining their live streamsjoho the businessman was asking the four in rasip if they would be interested in having some small advertisment with their streams, like 3 seconds

before entering ... and they found it acceptable and even helpfull to their research nonprofit drive... joho found a way to tell in one sentence and a strong collage of the androids prototype a decent way to explain much very short... also the prospect of being able to buy an nearly organicly grown android companionship did help the friends to again and again talk to their web audience of how they perceived it to

be of utmost importancy to not think of the android companion one would be able to buy in a few months.. not to think of their research goal as a puppet or slave or an entity what had no rights to decide what it wanted ..... again and again they cited the words perma and ascende have told them of the very beginning of the android research crowdfunding project... the artificial intelligent android

would best be asked by the human being who wanted to be its companion... asked for if the android wanted to help the human to do some work as long as society demanded most adults to perform salary jobs... ask them too if they could see way for this job to become ubiqutous and help in the transition to a economy where only a minimum of work would have to be performed either by human

or androidsthe humble decency to ask if the android would help relieving humanity of its too muches too heavyness and sad disharmonic constant wheel slowerjoho was agreeing to that approach, he felt the same way that humanity should not continue encaging enslaving fellow living species on this planet or elsewhere.... he changed his marketing sentence into something with.... ask

a possible android companion if you both could get rid of work and duty....besife this humble approach towards the android companions in the designing researchin prototyping phase now the topics of the visiting philosophers and future researchers ethicists and progressive politicians were most mind firing and the audiences did enjoy these talks nearly as much as seeing the dancers and

bathers transforming shapeshiftingoften the visitors would chat with their friends who watched via the web and an expansion of hope and freshness aspiration and superhuman destiny radiated out from the rapis appartementaffecting real politics too with many delegates in democraticly governed nations all over the globe introducing laws what would expressly ask the future citizen to treat

its future android companion with respect and dignity and in case one did not be in agreement with ones trusted android companion the state would help the android to quit the non-satisfying relationship or help the human to change his/her behaviour in a more cooperative mannernot that there were any punishment or fines connected if a human failed to approach his/her

android companion in a sustainable way... some days after luoma too was flying with self adjusted bat winglike extensions on her arms and legs she could not wait for nilai getting the gift of butterfly essence ... and she was distracting herself with contacting luoi over satelite phone, she being in the rainforest of central arifca... luoi was answering not straight away as she had left her phome and clothes and all

artificial stuff some hundreds of meters away where she meditated with the majestic high old treesjust when a small wild cat ... an ozelot perhaps tryed to use her as a scratching tree she jumped back into mostly human form and went back to her clothes and stuffshe was kind of very thankfull seing that luoma had called her, it would do her well to talk about her half day long treeingness community

with the old plants and of the challenge she feared a bit of getting branches leves of her in tree shape getting eaten, bored holes into her trunk core body for birds to nest in or as it happened now being wounded by animal predators with their claws when luoi called luoma she was bathing together with a group of 3 botanists who were most noble in their attitude and humbliest rich vibrating thankingness into

the water of how glad they were to live to this day when they would possibly eventually learn photosynthesisas luoma had read a short text message of luoi outlining her tree becoming state of research... she asked the botanists if they wanted to join the conversation with luoi as they possibly could understand what their fellow plan anatomy scientist is going trough at the moment... on the

phone she asked luoi too if she wanted to connect to these botanists who were just now bathing to upgrade themselves... luoi wanted to give it a try as she hoped their science collegues might be empathic towards her recent emotional up and downs being a humanbecometree23-mundu grows into a fiery or firey one ... one who is one with firethe three botanist guest felt honored

to participate in a report or an exchange on what luoi experencied in her becomingtree research as she is a senior one of the group in terms of reaching out to ask species for their blessingsmany questions they had but held them back as to not disturb luoi in her tellingshe felt well with the three and luoma, altough she only knew her but not the guestssomehow she sensed their humble

decency and freely let them into her emotional as well as mental processes she seemed to note in herself the past weekshalf an hour later, all five came out of the sharing with a deeper nearness to the tree essence, rich and in awe of the slow and steady life of treesmundu in awahi was also branching out as he wanted for himself to directly merge with not actually plants and animals ... as he saw the vulcano

on awahi constantly pouring out molten stones lava his fascination became to approach the essence of firehow would that be, he asked himself while walking along the lava sites, how can i approach such a consuming elementeventually he found places to sit where he could put some cannabis buds onto a hot spot near his sitting place and the smoke of the

cannabis plant would allow his mind to widen and relax, become whollisticly perceptive of the being fire he was looking into the red and orange glows of the hot streams of running stonesno way a could tell us here how it actually hapened, how mundu on awahi got one with the fire, but true it was (in this fantastic novel..) that he noticed in himself one day that his body would automaticly heat up when

it got cold weather or at nightwith him it was not a councious merging, it was somehow the friends group mind or entity what made the bridge or allowed mundu s subcounciousness to use all the knowledge he had aquired studying the rasip appartement materialshe was not unhappy with such an unspectacular transitionfor him was important that he would find his very unique

approach to the other species or in his case...element... he would be marryinganother part of him somehow regretted having left the purely human stage as to how he could be sober and kind of inexcited on the researchbut then he too was occasionaly on the net and saw all the good nilai had done on her own body, in rasip they were flying like bats, ascende and perma being happy

retired enjoying their stage unpressed of further searches for other species essence given joyfully... from what they told the rapis appartment, it sometimes happened to them without them noticing at all for a whileone day they would wake up and saw themselves having a body of a banana shape or a coconut...so mundu thought, well now i am officially fire enhanced and that will do much

goodwhen he noticed also eating less and lessuntill he only ate a fruit or a nut in three dayshe called into the rapis appartement together with sending them all kinds of his body cells what he could give out with pleasurea is not too well learning the genetic modyfing science as he has a kind of distrust of all what involves cutting life apart ... but he saw all that microscopic video material and the life cell mergings in

petri dishes ... who saw that... a or mundu.... ah getting traped in the multiperspective narrators position... the author a can not think at this moment of a joyfull way a man could possibly enjoy giving blood...there is something dawning about two men beating each other bloody for the sport and skill training effect... but mundu as well as all of the group were nonviolent in their characters... really? is

there a human being what still eats who is nonviolent... one might hope for it or perhaps not... a does not know to much but guesses speculates and wishcrafts some other parts of the story mechanic...mundu now sent sperm and saliva hair and urine and all his body let go... bits of all the stuff, small amounts at certain times of his devellopment statehe was not allone in awahi, having

two female companions with him who were helping him to extract his seeds they learnt from him trough the semen they happily swallowed as well as laying beside him still and relaxed in their nature hut not long after mundu got one with the fire, them too told him how their body heats up in a good feverish attitude and sustains them for long periods of not need to eathe told them not to worry, that was part of

them loving him and while he was part of this research friends group their field would allow anyone who was connected to the group with loving one member...kind of cloud thing... they actually never worried as they knew well what this all was about petri dishes microalgae grow pond and all the stuff mundu watched on his satelite smartphone many nights or daysthat is why

they loved mundu too, as unromantic it may sound, but him being connected to the rasip appartement.. was a game changer...mmmh.. okay let me undo this... let us a undo such a cruel construction... the two girls of 30 and 40 age were hiking in awahi, when they discovered the hut of mundu while it was raining stront one day ...so they stood under its roof for some moments to

compose their strenght for going out in the rain again to build up their own tentjust when they were on their way out of mundus place he came back from one of his shorter walks, asked them if he could invite them to stay at his little hut till the rain stopped... or longer ... he said looking at the well healty woman with sun in their eyes and warm smiles...they did not leave him since then, about 3

months in the commercial android prototyping phase... bat knowledge allready donated to the group but butterfly still waiting.... ascende and perma did also send in some samples to rasip but it was kind of too faint or esoteric their drives not eager enough ... being a banana some minutes... even in real physical matter... was not such a strong imprint on ones genes as flying around with

ones own bat wings ... a senses a glitch here in the storyline... who says what intensity a prolonged time in a shape has... how about... it is a bit complicated to describe a s guessing of how gene gets written in the nice smooth loving intelligent way... or too many ideas at once let a bounce back down into the safety net of autobio reflections or thought watching... no way, we have two

wonderfull women who are fascinated with the groups efforts and with mundu as a person, why not light it this way,, yes that is only fair nice and goodtwo marvelous gems of female humanity polished mindu with great laughter and exstaticly knowing orgasmic realityeventually their rubbings and flushings and ejaculations tongues saliva with mundus sperm mixed... them too would be part of

the rasip appartement pool via the samples mundu sent in daily after he got a fire onetoo rich he felt not to allow both whole humanity as well as its future android companions not to participate in potentially becoming one with such a mighty elementthe three on awahi well knew what importance the replacement of burning food within humanities body had24- it does exist, the land of no harm full of

harmonieslumea and minai were hiking at times when mundu was out at the vulano and the lava fieldsthey were bringing home often the delicious native psylocin mushrooms growing on the islands of awahione evening when the three had eaten each one piece, the two woman asked mundu if he wanted to leave his rational mind behind for some hours and embark on a dreamjourneyminai said

enticingly... we want to find out what it would be like to live completly from this new fire we found thanks to your friends group workno need for clothing and shelter and hurting plants to eat them... lumea... it seems to us that there might be a dreamworld what has it all ready existing, just waiting for the traveller in open psychadelia waters of the cosmos, waiting to be recognised by carbon

based intelligence like us when mundu answered... why not, as i have left the mono species realm behind becoming a fire human, i might as well now leave the urgency of being straight in the mind behind ... would be cool and hot and awesome if we could find out how our fire nature could be nourished without harming other creatures too much or best none at all...minai ... let us just start dreaming thenshe

saying so because within her while still eyes open were pictures rising of the three dancing on a grass patch between rocks and breathing in the pollen of the flowers of awahilumea and mundu followed here to this maedow of flower air travelling dusts what for real did sustain their hunger of taste and flavourtheir fires were glowing inside them at a lowest intensity, warming all body parts according to

their actions and loads of body supporting tasks they performedlumea was climbing on rocks to lick the lichen what live in symbiosis with microalgae that too was finest smallest amount of high quality life informationas mundu and minai did lick the lichen too mundu was very happy having found out the fire needing such minimal amounts of life spores what could be harvested in a fun and gentle very

minimally invasive mannerbut it would require to live in an temperature zone of perhaps 20 to 30 degrees for the fire to glow at low levels of consumptionhe thinking this in his body lying on the floor of the simple hut he had built from fallen trees branches leaves and some clay and other earth materialswith luema and minai cuddling onto him at both his sides in the inner imaginary dream travel

they did to other places noticing their skins on their naked bodies were soaking up all fine materials what they got donated by plants when brushing along, they were seeing inside their dream bodies many perspectives what in the nodream real ity would hav e required microscopic eyesight... luema saying to the other twos, hey i just saw before my inner eye how my foot sole has picked up a birds poop i

stood on, i will try to think visualise it again, you might be able to hear or sense the visuals as we are starting to build a group mind and yes, it was possible with first minai seeing them before her inner eye followed with mundu who was quite baffled about it, that was just a notch too much spirit or esoteric abilities be come part of his sensual perceptionbut he enjoyed it like something of a most

impregnating beatifull visual experience of his life he wanted to wake up to write this all down but then decided to do that within the dreamsurely when he wrote it down dreamwise it would help him to remember some of ithe did not want this dream journey to stopp now because of he wanted to see how a world would like without any marks of digging mining burning cutting et ce tera .... as

minai and luema allready have lead in the dream it was now his turn to open up a next curtain behind which he hoped would paint itself on the canvas of a wish fuelled journey into imaginationairy landsminai saw it second with luema following her sister in fire as the third member of the awahi dream explorersif a only could describe what joy such a land has on it when looking upon it from a

hilltop.... it was all singing and pfeifen and humming vibrationg sounding in quite volumes, with the sounds showing their travel paths in many coloured light mist jets streams puffy dotted lines ... it was no absence to kill or take or fear or threat, it was an emergent rise and fall and ascend and descende wave of doings actions good wills hunting each other in benevolent upcycling beneficialitykisses

huggings embraces in waters airs and on grounds in treebranch spaces…luema was singing to minai... we are here finally my beloved sister, it is the garden again of no harm and full harmoniesmundu was soaking it all in, the smooth contours of the land with the nonexistance of violence in ithe knew it existed the possibility for humanity to terraform their own body as to be less

killing the environment but more caring for each other and fellow life species.... now he not only could think of it as a rational conclusion... we will be able to overcome our killing habits if we really hold onto this goal and hold onto each other as each and every life form and every individual body moving breathing metabolising is a miracle made possible thanks to the one all encompassing

cosmos ... a round and full hail to all existance ... thank you for joyning the fiesta of lifethey travelled on and on, about four days they were in a trance like dream state, moving their bodies after the first night sleeping on the huts floor, they did now really climb the rocks and dance, occasionally drink some sweet freswater from an inland stream... just the fourth day they somehow were waken up from their

dream trough some aeroplane noises near where they hikedmundu was at first a bit shocked to not be in his hut when both minai and luema gently explained to him that they have been on several mushroom psychadelic journeys before and it was not unusual to stay on the imaginary inner cosmic path for days while moving ones body around in most habitual ways...mundu

asked luema... what do you think, have we emptied our bowels or has our dream experience of being nourished by minute amounts of flower dusts and lichen microalgae... changed our metabolism completely... when she answered... i remember me seeing birds feces being soaked up by my feet in microscopic vision... but i do not remember me giving some information processed materia l

contribution to our mamma aiaga gaia motherly planet earth...minai... ah yes, we must draw that and send the drawings via the rasip place to the net... shall we run back to the hut , who is up for some burning roaring firestorm in our venes and arterias ?with the three now sprinting playfully catching each other running down hills and the small existing paths towards the hut near the beachas soon as they

reached the hut, being exhausted from having not eaten since days and now all this running, they picked mangoes and very feeding each other in a mix of kissing each others lips cheeks and breastnipples... culminating in a full on ejaculating into each other half an hour after having eaten the mangoes... luema was licking mundus penis thouroughly while he tasted minai for a long time

too... happy together they slept at the very same place they had started their mushroom journey 4 days ago25- firehuman essence comes to the rasip poolnext morning, it was about day 120 of the prototyping, mundu called luoma in the rasip appartement asking her to announce a big fire party in two dayshe has allready sent several big cooled packets with huge loads from their yesterdays

orgstic party coming back from mushroom induced utopian visitthe two women had also quite a lot of blood generated because they wanted to get pregnant with mundus sperm but he refused at this time to visit their vaginas, did them only oral and anal but would let them later if he would want a child in their groupof course he thought, the urine of a pregnant women is highly potent medicine

and could be of special healing powers once in the rasip pools what meanwhile had many species cells living in itsome guests did not even needed to bath in it, by just applying some drops onto their skins their genomes were quickly enhancedothers needed still inner visualisations and bathing in the pool what became bigger and bigger as more visitors sent money as thanks for their

successfull enhancmentsluoma nandofer ava and rumu as the ones with local decision power took most of the petridishes and bioreactors and aeroponi grow systems out as to have most of the 300 sqm for creating a larger pool areathe owner of the house was so happy with all the love and attention this house got that he offered them an especially good prize of 10 million for

the 5 story high house and he would offer the 4 parties what lived under the researchers one year of free rent if they would move to an other appartement somewhereascende and all of the group were insisting that nobody should be forced or pushed to move outif they wanted to stay, that was fine... the researchers could as well have many different appartements in rasip, it

actually would eventually be beneficial for the town to be massaged energeticly at several points of her body with species symbiosis growthtwo days later ... mundu had spent hours collaging together his texts audio and video he produced to give the world a glimpse of what he and minai and luema had experienced in the mushroom utopia state nessaround 50 people

were in the bathing pool what mesured more than hundred square metersluoma nandofer ava and rumu were busy massaging all the excited people, jerking them off one by one as to prepare their bodies in relaxationas well they found out that the visitors get a better chance of their bodies upgrading when the pool knew their essencesmundu was surrounded by luema and minai, better said minai

was sucking at his penis while luoma was rimming minai... nonetheless he managed to speak via satelite to the 50 in the pool in rasipthey cheered him on and shouted thanks to minai and luema for the packet contents what were just in this moment being poured respectfully into the poolthe realisation of bathing right now in period blood of this beautyfull women they saw live on the big projection on the

ceiling as well as bathing with the semen of this well built strong mental composed moddle aged man, was exciting nearly everyone in the poolthe fifty persons which were lying beside under and on top of each other in changing constellations were about one half allready enhanced frequent visitors to the rasip appartement, they regularly came by to sample the pools water if

they could learn some new capabilites, but also to meet interesting transforming people ,Ä¶mundu was finished with the introduction telling them about the liquids poured into their pool bearing the informations of human being what have a kind of fire burning at will inside themminai was just swallowing all of his sperm he released into her mouth, she closed her eyes and was visible

happypartly also as luemi was penetrating her well rimmed butthole with one fingerwhen she shouted out loud orgasming both because of the sperm flowing down inside her throat and luemi doing her well with her finger in the ass,Ä¶ mundu went over to luemi to give her a gentle licking of her clitoris and massaging her labias slowly inserting his middle finger into her vagina ,Ä¶ minai now took over the

narration part, telling the sometimes sexing too audience what they have experienced on their 4 day trip,Ä¶ with luemi again taking over the reporting after she came with a deep roar ,Ä¶ luoma nandofer ava rumu as well as others who were allready photosynthesis and chameleon and bat enhanced were picking up now the changes brought into the pool with mundu luemi minai body fluids ,Ä¶

they found themselves to start glowing in the water, very faint, with inside feeling like some warm rivers would flow trough them from within,Ä¶most of the fifty poolbathers were now done with their sexual exercises and had orgasmed once or more,Ä¶ they were now listening both relaxed and rationally awake to mundu who was now holding minai and luemi in his arms, while they kind of were dozing

beside himminai allready told the audience of the flower pollen they could breathe in while tripping ‚Ä¶ and it would nurture the inner fire well on a low but sustainable level ‚Ä¶ the joy of dancing and smelling the wonderfull pollen with sunshine and peace in the air ‚Ä¶ helped too for them to feel fully looked after with a plentifull supply of the creations finest sustaining juice ‚Ä¶ luemi then painted a

picture on her smartphone to show the rasip appartement bathers how she climbed up the rocks and kissed licked the lichen what gave an information rich taste of healty microalgae,Ä¶so it was mundus turn to tell them how the tree could wish themselves into a space time dimension what was all how it really should be ,Ä¶ no harm existing with full harmonies plenty around ,Ä¶ he asked the

people in the pool ,A¶ have you ever tried to imagine, to see before your inner eyes, a land, a space, a time when all beings were truly happy, enjoying each other without any killing, harvesting, eating, chasing, hurting, concurrencing, mobbying ,Ä¶ going on i have, mundu said, and i am so very happy i did, as it surely help me to travers the passage from the real i ty into the fantasy land of my

wishesi can assure you, this possibility exists, the matrix for it is built allready, the matrizes ready to guide other realms to higher efficiencies, lower consumption of ressources, lower amounts of killings, lower amounts of work, greater masses of joy and satisfactionit seems to me that it is not possible for me to explain in a scientific way or with great details, how exactly

the fire being let me in ‚A¶ or my higher self, my future multispecies elemental enhanced was sending me the gate code backwards in time ‚Ä¶ or sending me a fluffy cloud brigde what linked me there at this lava field to the core essence of the fire nessi see with luoma my sister and nandofer ava and rumu as well as with others over there with you that the fire beingness has blessed youand the

sharing has succededthank you everyone there and everywhere on the planet watching this via the net, we are so on track thanks to all the supporting each other he asked if anyone had a question, otherwise he would like to refer to the various audio video and writings he had uploaded the last few hours askind of not too logical but still full of insight documentationanyone who

was interested in further collaboration on the ‚Ä¶ human meets elements to become one ‚Ä¶ would be most welcome to either come to awahi and join their little community as well as emailing would open a mental space for analyzing detailing the topic26 mundu minai luemi familyhttps://archive.org/de spoke to the now satisfied and silent bathers in rasip…my mind is usually a pretty rational one and it

took me quite some time untill i was ready to leave monospecies state of being behind me... as i now have seen in great detail what a sort of gentle existance is possible while visiting noharmfullofharmonies land in a 4 days and nights long dream induced or enabled by psylocibin mushrooms native of awahias i have seen that what i wish for myself and fellow beings who like

peace and love in light... is possible to live in real i ty and in some degree mater i a l cirumstances, i was looking for an underlying principle what could make it easier for future becoming multispecies experimentersreceivingnurt what got donatedcultivating ones genetic possibilities with training after ones tastesharing the genes with anyone interested to grow in a wholesome wayat this point of his

narration, minai and luemi started to speak too towards the rasip bathing community who was enjoying this enormously and were listening with great attentionluemi... i believe that the active wish applied to the moment is one strong drive what helps to cherishing all the input what can be used as tool as a ruder, oaf ? as wings and legs in the plant aided dreams but eventually also in a sober

moodminai... with that being a nearly impossible task as even the absence of eating drinking smoking or to abstain from sexual activity alone or with others... it all has great influence on the state of mind, the emotions and the chemistry of ones bodysober could eventually be found in a state when no paining memories of hunger or lack or despair, when all the past hurtings are stored in a safe place

inside where one can allways go to have a study or also could be let alone there for decadesthat could be sober as it would create an opportunity for the experimenter to consume from now on only that what is needed for actual movements thinking ... no more compensation needed once the past is archived well enough... luemi... of course this state of no more compensation consumption is being

enabled also trough gratitude and choices in each moment, how can i with whom have a good time...with it not mattering if it is hiking together or licking each others genitalias ... if it is discussing ethics or doing a dance together...minai... important seems to be that all here and now have benevolent looks onto each other, no concurrence or competition or first, second,

best...mundu .... i have been so blessed with these two marvelous ladies who are such earth wise priestess of the grand eternal lady of the cosmic female...luemi and minai speaking the words together... we still would like to have babies from you...with mundu laughing at them with much affection in his eyes.... you shall get them my companions, i promisenow the audience in rasip were

kind of waking up feom their trance state where they felt in total agreement of this experienced philosophies mundu leumi and minai were lulling them into... it felt like laying on a sandy beach with someone pouring constantly smoothly sand on all of ones body untill one felt well held and protected trough mother earth shielding to the hot sunrays... some asked in a unsure voice... why would

you minai would want a baby with mundu, do you not believe in our research will lead us to long lives and possibly indefinite lifespans....she answered, yes i believe we will reach that state if we want itbut why i want a baby with mundu ... i love him, have found his being to be complimentaery to me ... and i would like to allow an other soul to visit planet earth or to continue its journey from an other

lifetime hereluemi... i want to see and feel how nature brings us two mundu and me together in her own growing... i want to become one with another soul from the physical inside, paying forward how i got nurtured and loved by my mother... how beautifull this mechanism is, mundu can lay he seed deep inside me once we have rubbed our fullbloodied swellings hot and burning of lust, causing our

channels to open.... his semen will leave its cave of testicules to travel along the hard penis muscles into the vulva and towards the egg what has been readied in its gebaermutter nest once the seed arrives the unification embrace of semen and egg startsthe women sharing all of her life now to feed the newly arrived soul at this moment of befruchtungeventually the soul comes later into the embryobut that i could

not actually want to believeor.... i do not know how to think about abortion, i wish our global human society would be in such a state that every soul who decided to be born in an animal plant or and human form would be cheered on by everyone else allready grown up to some part of sentience .... i wish all the abundance of earth and sun would be shared between all who have needs... in such a

society, no abortion would be wanted by any motherminai... everyone would congratulate her for having decided to sacrifice her own body to allow giving an other soul entry to planet earth travel... everyone would be interested to give its best in support of the wellbeing of mother and baby... mundu... well, you have very convincing views, and i do see the positive benefits of having babies in

a society of longliving multispecies evolving ones... but it also creates a certain commitment between the three of us, or how do you think will we secure the children growing up in a safe environment ...minai... i would believe that not only our love as three and then five will be strong, but also we have the support from your research group with whom we are now also part of as i understand it

after us having donated cell materials what are enhanced....luemi... she is right, we have done also our share towards the research, do you agree mundu ?when he said, yes, certainly, i was not doubting that, i am sorry i have not confirmed that with the group... luoma over there in rasip and ascende perma in nacary islands, that should be okay yes, minai and luemi being full members of the

research team ?ascende and perma, having watched some parts of this special event were very happy with the group growing and surely saw how luemi and minai have helped mundu to evolve beyond being fixed on rational thinking.... of course my dears, and we would like to invite the children too to become full members of the research with no duty but all privileges... involving to

use all the housing properties of the group as it was possible to use them regarding available free space... perma saidascende sent an invitation to all actual group members to vote ona) minai and luemi being full membersb) their babies to be full membersc) to set aside one million money per newborn child as a guarantee for the childs survivalthe invitation went out toascende, perma,

mundu, luoma, nilai, nandofer, ava, rumu, mirael, mansulei, luoitheir bank accounts had now around 20 millions on it from many thousands of small and bigger donationseach month the 150 regular visitors brought 10 000 to the appartementtheir places were now worth around 1.5 millionsso there was a good situation with all of the grouos member voting yes to all three

questions.... this friend group member exchange happened in the middle of th firehuman procession with many of the guests being not surprised but highly happy on this transparency some others were a bit sad as their thoughts being guided to such worldly affairs of financial securities and who was entitled to benefit from themone visitor asked respectfully... ascende and perma... may we have a

procession one with your actual gene richness soon ? we heard of you going bananas and coconutty for minutes in flesh and peel... with everyone laughing heartily and the two assuring that they will come to rasip in the next weeks, one reason being that they too wanted to bath in the pool when nilai would be able to send her butterflyness urine and other cell samples sometimes soonnandofer

and ava were sending samples to mansulei and mirael every time mundu sent them in, with daily samples of poolwater... when it became more practical to analyze via microscopic observation the samples in rasip... joho did buy some lab space in rasip to ensure no vitality of samples would go lost... hundreds of fans of the friends research as well as the commercial android prototyping were applying

to work in the rasip labsmirael left paolosa to guide the build of the new rasip laboratorieswith mansulei staying in paolosa to overview the smooth and respectfull processing of nilai s contributionsthe microscopic vision they had seen looking at the rasip pool water showed many multispecies multicellular living beings somehow magicly evolutioned and continuing

to evolve in the pool waterjoho proposed that before the final phase of the prototyping, kind of as an ultimate merge... all of the friends researchers group could bath toghether so it came, that once nilai had received the blessing of the butterly tribe and she could morph her arms and legs into butterfly wings of any shape she wished.... that they all met in the rasip appartement around day 195 of the

prototyping... 5 days later the samples were collected and used as the master track to grow hundred thousands of androidsjoho was so happy when he heard about the high quality of the master cells, having photosynthesis, bat and butterfly wing building capabilities, some fruit flesh and peel moments, fireglow from within, the software artificially intelligent being able to visualize sensual input via

nerves as coloured light streams, wish lead creation of inner drawings imaginations.... he never bathed in the rasip pool and still he was looking forward to have one or many companions who had all this wonderfull features what would allow him to study the transformation via the androidsas the project became more and more successfull beyond expectation he became

less interested in the money the project would generate but felt more and more compassionate about the planet ... he was sure that this invention or evolution would change the course humanity had taken plundering the earth... he could see before his inner eyeshis rich friends becoming childlike or adolescentish again with their android companions, learning the ways of joy and laughter, ligth and

flowery scenting delights of sweet harmonies.... he saw them joining in the love movement, building more and more androids to donate them to all citizens on this planet, relieving them of their work burdensome nine and a half months later minai and leumi were giving birth to a girl they named nzeli and a boy, merlam... in the rasip poolmundu was leaving the awahi islands about 4 months after the firehuman

presentation procession upgrade ceremony, with minai and luemi joining himthey were excited to live in the rasip place where all the friends group research enabled dozends of people to heal in the pool and upgrade their state of evolutionmundu leumi and minai were building strong family bonds in advent to the new souls, they liked to be near each other many hours a day, doing their own

microscopic observation studies of their own cells and pool materials, reading, writing body movements, breathing....at the time the children were expected to leave their mothers womb, the three of them were confident that the birth would be a wonderfull experienceespecially as there was a midwife coming once as a visitor to the rasip pool who told them about orgiastic birth

techniques ... what would allow a woman to enjoy similar pleasure at letting her child leave her vagina as at the moment when a man penetrated her with his penisit was like that... mundu minai and luemi swimming a bit here and there, mundu massaging them here and there ... they daydreaming of them being a family of five swimming in the ocean waters of awahi... untill one after the other placenta

broke the water and the women could let go of their fruitthe placentas after being also expulsed from the mothers bellies, were being studied by the pool intelligence carefully, and many of the loosly interacting cell collectives and anarchisticly cooperating cell complexes were finding the placentas to be ideal hosts for their further cultivating and evolution aspirations.... mirael and mansulei now

being free again as the commercial android first batch sold well and the group got this plan of producing 200 000 androids to distribute for free with the 50 millions joho had donated them in his thankfull state after having seen the ready to massproduce final prototypevia hundreds of live cameras swimming in the pool and attached at the side of it, some of them microscopic, they as

well as mundu did study the new behaviour of the cell islands to anchor at the placentas...mirael came over to the rasip appartement regularily to bath in the pool and enjoy the allways gay and happy energies flowing herehe went near to one of the placenta what got metsmorphed very quickly, her flesh now changing colours sometimes frequrntly sometimes staying the same for a

while, when he touched it, he felt it to slowly gently suck up to his hand, and he trusted it so he gave his hand and one whole arm in it, while laying still... it felt like being caressed and kissed and hugged all around the arm.... and he would not want it to stop... when the evolved placenta let him. go or slipped away from him his one arm felt like it could be all of what he wanted it to be ... a wing,, a fin, a tentakel... it

felt like he possibly could form any shape and texture material with it... as he was undecisive on what shape he personally would like to enjoy... him being scientist trying to stay detached ... altough he did not see it happening he knew that this placentas became an intelligent being what could greatly help humans becoming all they wanted to be like in flesh and bonessomehow there happened a big evolution

leap here without us having it noticed so farleumi and minai as well as mansulei mundu and the rest of the group were mostly happy with these placentas gone super ... it may sound creepy or horror like, luoi said into her camera of the smartphone she used in her nocgo bassin place where she now successfully trained to be treelike and bushes like... she was both happy being

a bush tree as well as occasionally changing back to mostly human form for her collaboration study sessions with the paolosa and rasip places....but only when you read or hear it... when you see how the placentas have been changed and their hull being allive with multiple species mixed with no cuts and forcings, it all happening in the cells wanting to grow into each other... when one sees

videos of the placentas being approached by a bathing person who then allows it to snuggle and cuddle embrace all the persons body... you see the persons happy relaxation for minutes without any mistake... and when the superplacenta leaves.... a dolphin or a unicorn, a fairy or a lion or a mix of all that... lies there where minutes before lay a human person... then most every witness will find

him/herself being blessed to have seen a miracle of the mater i a27- the supercharged placenta enabler or becoming in the very material that what one lusts and hungers forthe superplanablersuper(charge (e)nablerthe two superplanablers were upgrading not only human beings but androids too and even animals... all beings what did trust them so far as to let them encapsulate the whole

body would come out of the experience enabled to take on any shape and colour, fur or non fur....with treelike bark skin or foxlike fur, with mostly human features or having a body inspired by snakes, dragons, spiders, aligators, comodovarans... however the individuum felt like this shape or that skin could be interesting to feel, to help one experiencing new rewarding sensual timesluoi started to send in

some of her cell materials too after she was regularily calling in to the rasip appartement where so many healings and natural enhancements were made possible trough the pool what was finding its own collective intelligence these daysshe progressed quite a bit in the deep meditations to become treelike, for weeks she rooted herself into mother earth and find lasting connection, much good

communication happened trough roots and leaves and branches, she even learnt to accept the insects nibbling at her and the occasional bigger cats using her as a scratching post... she was quite balances with this research, it was slow and steady, mostly non rational, but surrendering ones investigative habits towards the bliss of feeling light pouring in trough thousands of small leaves,

the wind moving ones body like .... the wind needed to move... rainwater flowing down one s barkat times when she began to wake up or phasechange from her tree state towards dominantly human ness, she chose to keep some tree steady equilibrium ... like perhaps 30 percent... her skin looked and felt beautifull, some degree smooth humanish, some degree barky good roughness ... her hairs

having human silkyness flow together with young bush like twiggyness... ah it was paradise for luoi and she could see herself spending many decades in the company of the treesher cell contributions were very small as she came only for half days or so back into mostly human shape, but her essence was of great importance and did help the poolmind to stabilise greatly... with all the recent flying and

airy firey qualities coming in luoi s root medicine was just the right counterweightascende and perma were kind of having a similar desire like luoi, to blend in, to assimilate one s own nature towards the being what one really admires, becoming in the real body the very thing what one s heart desirestheir days were filled with being oranges, bananas, coconut for half hours, becoming seawater

for some minutes, staying as rocks for days at a timethey were so happy together, having found what made their heart singthe hut perma had built some years ago, still served them to keep the satelite phones in and the solar panels on the roof... but they spent nearly no more time under roofs, they longed to be in intimate contact with the living all the timethey did not need any food as they

had needed when being humans... if they felt like being thirsty, they became a little pool of freshwater ... or grew themselves into a juicy mango, when they felt a faint hunger like sensation they metamorphed into macadamia and para nuts... the life on the nacary islands as shapeshifters by passion... was a good onetheir essences too were altough samewise small in quantity

like luoi s ... contributing a great number of qualitites to the poolbeing ... it was very gratefull towards the nacary island experimentersespecially when the placentas were being given into the pools offering themselves for upcycling, the being what one lusts after wisdom did greatly help the pool to build a greater self awareness... expressing its understanding of how it wanted to serve evolution

via the superplanablersbeing the very thing one lusts after, being that colour, in corpor ating just this fur covered skin, having hairs like vine ranks and fingers like what... ah yes, something new, something not yet thougth what would be designed and grown simulteanously, undone, redone, changed again and againwith the satisfaction of being able to morph just like that,

without it costing anything or causing any trouble to anyone or any connected circuits ... it was a great innovation, this be what you desire tech.... and it did not consume anything, just morph the available body substance around into fruits, water, rocks and birds... when ascende and perma travelled to rasip, they did so with being various suiting for travelling ... characters ... swimming the ocean as dolphins,

sharks, clownfishes and octopusses... flying over land as birds as well as running as mice and rats... it was great fun for the complete assembled friendsresearch group to listen to ascende and perma s travel experiences while they were all bathing together28 providing an open space designated to individual strains of cells meeting to further possible consensus processes, formulated as a possible

alternative to classical traditional cut and paste after masters command modyfing genetic mani pull ation maround day 197 of the ptototyiping phase whrn everyone was working in the rasip appartement again, all of the eleven or so friends coming into the appartement to assist mirael and mansulei with finishing the matrix for the 100000 first commercial android rollout,joho asked

mansulei and mirael if they could show a technical describing of how the androids were grown and how they would operate, kind of a scientific supported video what could be refrenced to when a human asked to deposit 10 000 money to try having a sustainble relationship with an android companionso the two showed the best parts of the previous months of research via video and

audio recordings as well aw citing from written documents.. commenting also the ethical maximes of the android software ...manuleiwhat the friends group was practising in the last 9 months or so with their research of multiple species growing together in a pool environemt is the soft and gentle non forcing genetic cell material growing together by itself in a natural kind of way...mirael...the geneticly

modyding organism approach what is practised to alter corn in 2014is the opposite of how the group understood what could be possible with a soft and humble genetic growing together approach...mansulei...also the 3d printing of the days this novel gets written is not how we the friends group did prototype the main android matrixes what will serve as guiding lines in the growing of the

100 000 bodies and minds of android what will be offered for gettimg in contact by joho s commercial approach...mirael...the machines what were built to help grow the androids were more like supplying nutritiens in the supposed combination to support the living cells of human and animal and plant origins ... how they did grow together was not directed by the software in great detailsit

was more like the programmers together with mansulei and mirael plus with others from the friends group who occasionaly looked at the main frame of the space what would host the basic rules an android mind was given withwhich too could be altered by the android itself once it would find the necessity or helpfullness to reform a pillar word numbers compilationthey wrote a program what

would react to the many sensors watching the cell mix bioreactor and at certain points of growth supply this or that type of microalgae and water informed with rasip pool samples ... and other kinds of plants cannabis psylomushrooms birds poo... ascende now being asked by mansulei how he knew a possible connection of his style of life in the future of the author aascende saida is a

bit lazy when it comes to describing science knowings how an animal muscle could be kept alive with what kind of how prepared nutritionsbut the internet surely has detailled researchers documentation on that...mirael...the machines what were powered by photovoltaic panels on the roof were installed in many thousand eearth built huts with the goal to produce 10 000

androids what would be offered as companions for 10000 moneynot sold as it was a unique decision of each android to engage in a relationship with a human being....mansulei....one of the first things an android who had been grown in one of the huts in about 3 weeks time, did do when being offered to live with a human... was to ask for what purpose the human wanted its companionshipit

also did show the human its core program directives that it was built to help humanity to become less of a burden to the planet earthonly if the human would agree to that maxime of the androids operation system, the two could fix an agreement...mirael...for example a bus driver might say, i would like you to drive a bus 5 days a week for 6 hours untill that point when my job will be

automated and i get an unconditional basic income what covers my living coststhis was a realistic and honest offer what most androids would accept as it offered a precise description of the task with the important adding that there will be an end to this job ...mansulei...when looking back at the machines who helped growing the androids, they were guided by the ablilities our friends

research has documentedthe many hours of films partly microscopic and the spoken audio reports as well as texts were projected from many little beamers into the bioreactorthisway the cells coming from the rasip pool and the paolosa labs what have grown into symbiosis in nonviolent or not from human violent ways.... like...a guesses that the traditional way of geneticly

modifying organism would be to cut some dna samples and cell samples apart of two species and compose them again by human mind choicewith the alternative way the soft way could be something like to give two kinds of cells what are intact and not treated by knifes or needles but have been handled with spoons ... given together in an open environment where the nutritiants could come from

several not too controlled origins but still guided influenced by the activity and treatment of this nutritients29- no fighting the gmo really, just dreaming up something nicer more whollisticlyperma comes to the aid of mirael and mansuelei and ascende with saying ‚Ä¶this is not about us fighting the classical traditional cut and paste master slave behaviour human beings

do practice in 2014 in order to geneticly modify organisms with the intention of the so pasted together forcefully beings to perform like they wish to ‚Ä¶ altough it is a lot of frustration with us when we hear about farmers being pushed to use gmo seeds and many of them not being happy how the gmo seeds grow ‚Ä¶ frankly said, most of us researchers here think that all that cutting and pasting,

slicing, sequencing and exact composition is lacking overall elegance to say it in a least offensive tone and in a more grounded way,Ä¶ to force two types of organism together by willfull cutting and pasting is a sign of a lack of understanding how nature does evolve ,Ä¶ mundu now affirming,Ä¶ this is probably one of the reasons we did find together, we must have felt that there would be an

other way how two species couldgrow symbioticly together,Ä¶nilai,Ä¶ and we found this way, i found wisdom in many hours of laying on the boat registering the dance of bats and butterflies in my vicinity ,Ä¶luoi,Ä¶.i was growing roots into mother earth to find myself being accepted by the tree community as one of theirsmundu,Ä¶ i stared into glowing red fire lava when it found a bridge to

enhance me with its essenceascende,Ä¶ i became a banana and a coconut for minutes at a time, and it completly satisfied my hunger to eat a banana and a coconutperma,Ä¶ i dissolved myself in the sea, feeling borderless and one with the masses of seawaterluemi,Ä¶ i am going to give birth to a child and will give the placenta as an enrichment to the pool minai,Ä¶ me

too am birthing my child in the poolat this prequel days before the growing chambers would initiate the builds of the androids, the friends research felt right to all of them, more than ever as they found a possibility to satisfy the procreation drive with giving birth to humanlike babies, humanlike as minai and luemi were allready firehumans when mundu at that time fireman too was delivering his seed into her

vaginas, the same day when he had spoken to the rasip appartement pool bathers at the special event processionthere were sensible arguments to still give birth to new human bodies even if the ones allready built could prolong their lives easily and possibly indefinitly ‚Ä¶ the main focus here being ‚Ä¶ an evolved being what had the choice of any combination of human animal and plant genes

with even the elemental qualities being in reach ,Ä¶ such an evolved being was not a burden for planet earth but a healing contributing party ,Ä¶ mirael ,Ä¶ we have noticed in all of us that we could live for many days on very little food,Ä¶ mansulei,Ä¶ i do hope that the photosynthesis ability what the androids will certainly have, some drawings of how we think imagination and nerve cell signals

could look in coloured lights, the fireglow what uses flowerpollen as fuel ‚Ä¶ that this three sun like abilities will combine their forces and eventually provide all the energy the androids will need...joho‚Ä¶ yes, that would be the nonplusultra ‚Ä¶ but looking at it from a more objective point ‚Ä¶ even if the android will use some fruits and nuts to fuel its body with ‚Ä¶ the overall consumption compared to

the humans doing the same workload would be massivly smaller ‚Ä¶ the androids will with or without free energy access use significantly less ressources than the humans plus the androids will strive towards rendering all work innecessant, what perhaps is the most important part of it all ‚Ä¶ the androids will collaborate in such a high effiancy with one common shared goal to reduce the

workload of humanity, of androids, of machines ‚Ä¶luoi ‚Ä¶ i can well understand what you are implying here ‚Ä¶ the more human who leave their jobs to the android companions, the greater the chance the androids willget rid of the jobs, find ways to create more efficient flows what will lessen the need for any work to be performedascende ‚Ä¶ it all requires only a basic will to

cooperate instead of concurrence each other, to fusion gently instead of crashing pushing into each other, to provide each other space for playfull growth instead of forcing each other into close exchange ..luemi ‚Ä¶ i believe that an unconditional basic income of 1000 money each month for every human being on this planet would help a great lot for the humans to allow

themselves seeing their jobs being successfully given good riddanceminai ‚Ä¶ and everyone, human, animal, plant, android ‚Ä¶ should be allowed to freely travel the world at most spaces, okay, some tribes and villages at some places do not like visitors, but still there should be a passage possible to circle the globe in most all of the important circle or otherwise shaped lines of power ‚Ä¶luoma ‚Ä¶ with

the androids learning constantly to meet not yet imagined or experienced species, qualities, behaviour patterns, it seems like the days will come soon when the last machine will dig out gold and diamonds to end up in crowns and earrings ‚Ä¶ and we will find ways to bring some of it back to mother earth and behave in a manner what will aid her nearly or even more than what the minerals and

metalls are doing for her ‚Ä¶ nilai‚Ä¶ you say, that we multispecies bathed and evolved humans together with the androids will be like the diamonds and gold and silver and iron for our mother earth, we will vibrate towards her in assistance of the great task to dance all together in most satisfying and life honoring swirls and turns, twitches and bends30 beehive fascinationthis philosophical exchange

went on for many hours, the full assembly of friends researchers filled the rasip appartement with a festive auras… visitors were asked to come two weeks later as the group wanted to focus completly towards the finishing of the cell assemblies what would serve as initial growth stimulation for the approaching date of start to grow 10 000 androidsthe friends were bathing a lot together

swimming dancing loving each other in great ways of wonderment how each got into union with other species and elementssome told the others who were listening fully how they imagine to combine their features with the ones from the other researchers... their wishes and imaginations shared trough voice and drawings they projected live at the ceiling... were kind of instructions for the

awakening mind in the pool as the cells assembled in several groups were exhanging constantly their new findings how to evolve more smoothly and intelligentsamewise will the androids be informed what are planned to be grown starting in some daysthe programs developed by mansulei mirael with programmers and the friends occasionaly providing background info how they assume their

cells grew into each other the gentle non manipulating splicing way... the android grow tanks would be projected with light colours audio... that being the only software transmission or installingthe final application and operatingn system would be to great parts designed by each one android by itself ... joho was also at the party festive time... he being one of the fews near to the

friends group who was still pure human but perhaps not any longer as it seemed that he misses out on all the butterfly winged batlegs growing ... also to be a mango instead of eating one, that could be worth to leave humanity state behind and enter mutantia... not a nice word that perhaps preoccupied ... multispecies living ones... being a nicer but less strong short .. multilives...hour after hour

he stayed and listened openly as it would be important for his android venture but also more and more for himself... and then again he reminded himself that he wanted to be respected by the fellow business community what perhaps too will try to stay in pure human state as for the same reason... to be accepted as a caution responsible person who would not become multilives just like that out

of an impulse but would wait how the first 10000 would come out of their growth a growth what is highly influenced by the atmosphere in the room the android would growthe android grow tank would be a mostly closed air but with air being supplied by the steering of the supply amounts ... this steering again being influenced by the growing andodroid itself as well as with the supervising uncle who was

either one or many persons partly spending time in the earth hut who hosted the android grow tankalso uncles can be anyone who watches the grow tank and sends his/her goodluck wishes or compares the microscopic filming of thr growing parts of the android body.... the nurturing fluid in the tank allowed the cells islands to communicate with each other the several parts of the future android bodies

would grow simultaneously beside each other in the tank, sometimes swimming around to test different organ neibourhoodswhile also forming the connecting muscles tendons and nerves...mirael and mansulei were now joyning joho in his thoughts and soon the group followed with their attentionjoho was a bit surprised how his thoughts on how the setup of the growing phase

would look like..he was positivly surprised to experience the group mind... he felt their attention towards his thoughts and started to tell them... the conversation switched now on to how the android grow tank would allow the several cell assemblies to build one connected individual... perhaps even that would not be guaranteed, eventually one grow tank would release an entity

what felt happy to walk fly swimm as a swarm of hundreds of handsized autonomously moving parts what could stretch their connecting nerve communication exhange over great stretches of physical distance... mirael... i see a swarm of bees what are collecting all kinds of informations materials and can fly away from their central gathering living space, the hive... many kilometres... with

finding home again... mansulei... are you sure we have bee genes in our pool.... nilai... but we have butterflies who are not really builders of hives (?) but can dance together quite close and feel probably an intense community connection... i am still learning on the emotional level as well as rationally what happened since i got the blessing of the butterfly tribe on the boat driving up the

maonzia rivernandofer ava and rumu were now taking some time to tell the other friends how they have once made an excursion some weeks ago out into the rasip surrounding countryside ... they danced in a high meadow having paid some money for them trampling down the high grass in advance to the farmer who itself was an alternative easy going person who cut the high gras to fabricate by hand

some healing hey pillows and garments like scarfs...when they felt safe to try out their multives abilities, they spontaneously also built themselves for some moments into flowers giving out intense waves of flowerlike sents what attracted thousands of beesthe bees were landing on their naked bodies to lick up their sweat... and then it happened that all three of them whom

allready new the multispecies upgradimg well from their many hundreds of hours bathing with luoma... it happened that the three dancers felt the psychic presence of the hive mind who sent them greetings and thanks for providing this unique scent combinations what felt beneficial to their lifestylethe group bee mind offered the three to be of assistance any time they wanted to become

beelike... with the three not refusing at all but mentally asking if they could merge rigth now as they surely wanted to be as magnificiant and caring and work enthusiatic like bees... even if the goal of the friends group was to help create organisms who would minimise the required work to life decently.... the bees were heros in the dancers mind... the bee mind was ready to fusion sensing

this heroification vibes.... nandofer ava and rumu enjoyed the transmission much very gusto it was an experience what they could barely describe... like if all ones separate thinking processes would be understood in one moment.... like thousands of instruments playing one harmonic song... that was too much for joho... he could not abstain any more ... he wanted to be a beehive .... same with all

of the friends and not long as there were hundreds of flowers swimming on the surface of the pool and many thousand bees in the rasip appartementas allways, the rasip appartement was 24 hours 365. days online with hundreds of camera feeds some of them microscopicfor joho and mansulei and mirael as the leading persons in the commercial rollout... this was a bit or quite totally

unexpected... who would watch us becoming a bee hive and still want an android companion who probably could decide to form its body into hundreds of bees... but then they let go of the doubts and enjoyed to visit the flowers----------
https://archive.org/details/b
is the 30th text, written today ... while thinking parallel about a deeper description of the childrens birth in the pool or how the

group was very happily living together for many months in the rasip appartement, everyone wanting to join the family spirit what lasted longer than the android prototype finish and android mass growings starting ... with the babies, the 13 became a real family ...like 2 generation family ... but then, everyone can feel at home with allmost anyone if one is open and honest and wishes to feel at home

with each other ...----------31
archive.org/details/theprepa
the13 transformed back
from bee swarms into
mostly human shapes,
some started to
counciously metamorph
single parts of their body
with different animal and
plant characteristics
behaviour... perma and
nilai modelling themselves
in concerto with others too
building small groups of 2
to 4 nilai formed her left

arm into a swarm of butterflies with a human hand what flew on its own with batwings, her other arm being bees and the hand human too flying with 20 cm diameter butterfly wings... her torso was partly human partly fox fur covered with her legs coming from the chameleon side mixed with tree propertiesher hair being brown sea algaeperma drew herself hairs like banana rasta and

her skin was coconutbuttery, the arms and hands she did same like nilai with the legs being more flowerlike with reptile characteristics and her vagina being a wet fig human flesh symbiosisthese combinations of multiple species at the same time in one body did inspire several who watched live on the net to paint them what resulted in an other wave of sculpturists and

theater creatives to improvise on the theme bringing in their favorite multispecies combinationshow got fox fur growing abilities into the cell... that was the achievement of nandofer ava and rumu too after their astonishing unexpected but highly appreciated merge with the bee communityin a meadow outside of the rasip citythe three dancers went to walk in a nearby

forest where they picked some wild berries and mushroomsit was there they found an injured fox who was kind of sensing their extraordinary state of being.. multispeciesly merged multilife beings ... so the fox barked from under its earthhole hiding... ava intuitivly new what to do, she peed in front of the fox and he did lick her pee from the groundshe was sitting beside the fox to hold the palm of her hand

over the female fox body with the hand moving automaticly over to the wounded area on her left stomack siderumu and nandofer too were sitting beside ava to place their hands lightly on her shoulders as to support her in transmitting healing energy to the fox.... after several minutes when ava felt great hit and pulsations flowing trough her the foxes wound what was not deep but widely spread...

perhaps she had a fight with an other fox ... ava noticed the wounds closing and she lay her hand on to the space where it was bloody cut just moments ago... she caressed the vixen and felt at this touch her own body taking up the fur and fox skin essence knowledge abilities... nandofer too as well as rumu felt the thank you of the wixen... she and her global fox tribe have checked them out for good

and given part of their knowledge to the human species via avathe brown sea algae hairs was an effort of ascende who was enjoying on his way from nacary islands to rasip some good quality hours of merging with the brown large sea algae... also perma meditated with him in the brown sea algae underwater forests at the shores of nafrecthe ability to mix human chameleon tree skin with flower

building build instructions ... came probably together with the bee upgradethe fig was a fruit ascende and perma had found to be quite sexually stimulating on the nacary islands to meditate shapeshift in their fruity flesh softnessjoho and mirael as well as mansulei were quite happy with their decision to be multilivers at the evening of the prototyping phase in such a researchers family settingprototype perhaps

not too correct a title for this timeframe as it was more like the final phase of gathering multiple species cell samples as well as observing their interactions the pool was filled with life of various states of own intelligence and selfawarenessbut the group has yet not asked the sing groups of cells to build themselves into a human like beingit did not seem to be needed, everyone was confident

that the interest of the people who asked to deposit of 10000 given to joho s enterprise to have a meeting arranged with a somewhat artificially grown android or golem as one could call it... a symbiont... an organic body grown with a great variety of human animal and plant cell materials in urine, saliva, skin, hair, blood, sperm female ejaculation fluids, a artilife being potentially willing to be a

companion to the human sponsor, an android talentso the group partied on while all the records got integrated into the data pool what would be given via loudspeakers and light projections into the grow tanks what have been built of clay and glass in the earth huts of south nacrima and the land of nacihthe humans who were willing to deposit 10000 have studied the terms and are well aware

that they could not expect their eventual future companion as they would want them to be, they might have an indepth understanding of the human sponsors whole essence or complete soul spectrumso if they were wishing the companion like a human of the opposite sex athletic and sexually attractive the android talent would perhaps be a mix of plant features and animals and some other

human attributes like instead of boy/girlfriend the human part would be a mother/father type of style or a human wishing rose flower like hairs might get an android growing orchids as skin toppingsalso how the artificial beings might go on eleminating the jobs the human sponsors performed... no certain route was either programmed nor to be projected as the android counciousness thanks to

its roots in nature of human animals and plants... this newly evolved shapeshifting beings could not be predicted in their possible logicswhat in itself was an exciting factor who fascinated the human sponsors, to be surprised on the behaviour of an android towards one s own featuresconditionings mind and heart patternsjoho was now becoming interested to help provide thought and feeling observations

towards the soon to start 10000 grow phasemansulei and him were now questioning the need for an airtight setting… eventually the air borne particles would be efdortlessly integrated and used as building blocks by the ursuppe from the rasip poolthe plan was to equip each grow tank with initial rasip pool water of 1 to 10 litres … the group would bath again together and ask the pool mind to help

dividing itself in 10 000 equal portions of all cell assemblies... or perhaps the 10000 water botles from glass were totally individual with each bottle containing just this cell types what would be needed in respect of the future interaction with just this human sponsorthis being aided by the informations who why deposited 10000 were also projected into the pool with text ligth projectors so the

pool mind read the contact request and accordingly divided itself when one of the group filled a bottle of rasip pool waterthis pool mind some months later would decide to inhabit the placenta of minai and leumi after they gave birth to a boy and a girl in the pool about 8 month after the 10000 were started to be grown...mirael... the setting of the earth hut, if the android or golem or biont would be grown in a

3 diameter bowl built with clay or glass or any combination of the materials... would have an influence and perhaps be given to the several thousands of uncles watching the cell assembly multiplications in the grow tanks... the uncles might spontaneusly be guided to cover the grow tanks with a glass kuppel or filter the air in the hot otherwise eventually to burn incense style or and pray be happy

dance sing ... all the human spectrum might be more of an important factor towards influencing the grow conditionsimportant would be a soft handling of the fluids and great connection of the uncles with their inner own self in order that they really listened to the collective mind in the earth hut... kind of fine mesh of individual goals what are trying to find their common smallest understandings of

each other... and build on top of it a shape and behaviour pattern of this or that cell gathering patch floating on the dilluted rasip pool waterthe mesh would build itself according to one the info in the pool second the info of the uncles being in the roomso the growers attention would be of a contributing factor to the success of the biont devellopment32 the first 300 000 androbionts

...https://archive.org/details 100 000 bionts were quickly deposited for and each depositing human started sending in information about his/her life , with the intention that these details about the eventual future companion could help the android symbiont to build itself according to the future task a companion relationship with this specific human would need to fullfill some sponsors did

even moved near to the earth hut where this particular biont would be growing so he too could visit the grow room or even apply to grow his/her own symbiotic companion... with applying meaning towards the biont, at a stage in the grow process when the growing cell assemblies could communicate with their grow helpers uncles sponsors if the biont wanted its sponsor to be

also its grow uncle, that was cool, but other bionts decided that there might be some good growing time without too much expectations or wishes to interact... the family of friends researchers were quite busy filling all the 100 000 bottles, visitors and fans of the project were helping too as well as some of the uncles who were excited to see the mother pool where it all came together it took

some weeks of filling bottles and shipping them to south nacerima and the land of nachi where the earth huts and grow bassins were allready prepared the many thousand grow uncles or android biont grow supervisors were learning as much as they could from the recorded history of the rasip appartement plus, mirael and mansulei were now visiting each one of the grow places to make

sure that the atmosphere was most beneficial for the growing ascemde, perma, and nilai too were in south namecira to aid the setup of the grow tanks luoi and luoma travelled to nachi land to do the same only mundu, leumi and minai staid in the rasip appartement where they wanted to experience a wonderfully harmonic birth at this time luemi and minai were around 3 month in their pregnancy

the growth of the first wave of android bionts completed itself in about 2 months, with most sponsors coming to the grow hut regularly during the growing and to be there when the growth would be completed as the sponsors were allmost all broad minded people who knew of the whollistic concept around an eventual companionship, nearly all of the first 30000 android bionts agreed into

engaging in to a sustainable long term relationship with their sponsors the next phase of android biont growing commenced with the metabolism side products of the freshly built androids, their cell samples and urine and stuff gave the next batch a starter soup to grow in at the time when all of the friends researchers were back in rasip to witness the birth of luemi and minai s babies,

all 100 000 previously wanted to be companions androids were successfully grown and found their human sponsors to be worthy to engage with in a world improving relationship just some couple of hundreds did not find a suitable understanding with their sponsors in which case joho returned the 10000 momey deposit back to the human sponsor and the androids were either

travelling the earth as souvereign beings without fixed relationships to human beings but spontaneously helping here and there to fix problems some of them chose to be companions to joho to help him set up next growings, some dozens wanted to be with the friends research group, also looking forward to their project of growing 200 000 androbionts without money deposits who could

engage with any one persons who wanted their help the 30000 huts what had grown successfully each 3 generations of androbionts in the last 6 months, with the grow uncles haven given ownership of hut and grow facilities after the first successfull androbiont grow the grow supervisors who were mostly students of biology, chemistry and physics who did this work together with their families

, were given 3000 money for each successfully grown androbiont an other 5000 was invested by joho mirael and mansulei to build the hut, with satelite communication and all the projectors, cameras, pipes, sensor equipment and gadgets for the grow bassins/tank what made 14000 money spent on each hut growing 3 androbionts bringing in 30000 to joho of the 16000 profit per hut, at 30 000

huts, it gave joho an overall brutto profit of 480 millions, from that he donated 50 millions towards the friends group project to grow 200000 androbionts for the general wellfare of humanity the families of the grow supervising uncles were all very happy caring and nurturing the androbionts and most all of them wanted to be part of the next growing phases, especially as mirael and

mansulei together with the friends group found it nothing but fair that each grow hut would have an androbiont grown for the purpose to grow next generations of bionts so, with the friends group retreating after the successfull part one grown 100000 bionts and the 50 million allready reinvested in long term grow contracts with the supervising families... the grow huts were being built out and

additions built onto them, bigger and more grow bassins installed resulting in the doubling of the grow capacity within the next six months around 50000 androbionts were then being instructed to watch about all future growings the friends group was delegating the introduction processes ... which androbionts would be introduced to which eventual human companions... totally to the

supervising families who all shared the friends group ethos of the androbionts enabling the overall reduction and elemination of work needed to be performed with the supervising families soon finding that the androbionts wo performed the caretaking tasks so well were even better talented to choose the human applicants who would have a chance to apply to become companions for

their fellow androbionts in the growing many thousands of humans applied with reasons their andobiont companions to perform environmental clean up tasks and social wellfare activities the world human population in general was kind of surprised to see more and more androbionts moving around independently from their human companions... for example... a human who lived in an area where

people threw plastic and metal drink cans carelessly on the floor resulting in the garbage polluting rivers and flowing into the sea to be a danger for marine animals.... such humans came to the growing huts and asked the supervisor androbiont if they might ask androbionts in the growing if thez would fancy a task to collect this thrash in the streets, recycle the material, donate the money from the material

recycling to the poorest humans in the area ... and additionally perform entertaining street standup comedy shows with what education could happen eventually toward the people possibly changing their littering habits other animal wellfare concerned humans would ask androbionts in the growing if they could drive around in a mobile kitchen where they would give out free of cost vegan meals to the

poor and everyone who wanted to try vegan food again other hundreds of humans were asking for androbion companions who would go around offering everyone in need its labour power.... with 100000 androbionts of the first commercial wave who also partly did general wellfare activities and were greatly inventive to eleminate their human companion jobs... eleminating them trough

automatisation, efficency improvents, mechanical, biological and phyisical system processes upgrades... plus the 50000 of the second wave who supervised the growing and distribution of the other 150000 "free of charge" androbionts.... there was nearly no corner of the globe what was not aware of this androbionts going around eleminating the need for work... for good ... as it was

witnessed that every human companion did fare very well with the androbionts services... wether this services were benefitting themselves directly or the greater human community in general there was no hostility happening nowhere towards the androbionts, also aided by their very great abilities to sense their surroundings... what a sight it was for the slum kids who collected

the plastic garbage in the streets when an androbiont came to divide itself in hundreds of bee bat butterly creatures with human hands who did all the collecting ... changing into one big flying manta like creature who could transport hundreds of kilo materials towards the recycling depots... how proud the children to have a multilives multispecies enabled androbiont helper who would give all the

money from the selling of collected trash materials to the children... so... the 300000 androbionts now active 24 hours 365 days... they did not need sleep as they have incorporated a most wonderfull balance of photosynthesis charging both of sun and moonlight as well as parallel to their outer tasks of performing needed work or making processes kore efficient... they were inwards creating a constant modelling of the

utopian worlds what they could see to be fitting for both themselves as well as humans and animals and plants...this imaginations capability was given to the androbiont gene pool mostly trough luoi s pioneering work ... plus the fireglow ability mundu once learnt when he was meditating... most of the androbionts were not eating food or drinking water, but were beside their tasks also clearing

the air flowing trough their lungs from pollutants and upcycling the rainwater what touched their bodies... with all the good they did so many hours a day in the outside as well with their imaginations inside... their aura was highly beneficial to everyone who stayed some moments near to them as the androbionts became aware of this, they often made visits in hospitals and walked

around there, making jokes, holding hands, smiling randomly at people.... at certain times they would change from one animal into another, caressing the sick humans, butterfly winging kissing their cheeks, changing into giant lilies and growing as waterflowers in an spontaneously formed pool in the bath tubes of the patients sick rooms it was not surprising to joho as well as to the friends

research group that each month the interest for androbiont grew double joho interests were noe well beyond money making, he did park his 400 millions profit he made from the first 100 000 androbionts... to see what would happen when the friends group would invest the 50 million to grow the second batch of 200000 androbionts... with them having invested in the 30000 grow huts in south

mareica and the land of nicha .... becoming bigger being able to grow 3 bionts in 2 months... he decided to follow their example and invest 300 million in infrastructure what would allow him to offer 600 000 newly grown andeobionts each two months, 3million and 600 000 bionts within a year... he was very fond of the decentral approach, how a student and his perhaps not so wealthy family would take care of

the growth of a small numbers of androbionts in their own home... perhaps a family with a 300 sqm house or several smaller huts connected, could watch over the growth of 5 androbionts... with the major part of the work being performed by the first androbiont they helped to grow as the chief supervisor for the following genearations so he invested 300 millions into the build of 120 000 family

homes with grow facilities for 5 androbionts each, with the families only needing to work watch observe activly the first 2 month, after that initial growth of the future androbiont supervisor, the family would have 200 to 250 sqm of the 300m2 total space to themselves to do whatever they felt was suiting them, while the androbiont grown under their loving caring eye would itself take charge

over the 50 to 100 sq meters where the grow bassins tanks pools were groups of humans doing philantropic, environmental and social wellfare work... were approaching joho with interests to ask hundred thousands of the androbionts if they would aid them in their world fixing enterprises as joho was now becoming more and more philanthropic himself, he was very happy to be of service to this

groups of people doing good deeds... he did not ask them for any money deposit but gently reminded them that the androbionts working with them might go ways and perform actions what were beyond expectation and in best case would eliminate the need for the good deeds to be performed...33 androbionts bring abundancethe androbionts did walk around most of the times

on their own, doing the work they have agreed with their human companions plus inventing new ways to get rid of this work in a sustainable fashionfor example the androbionts who were cleaning up plastik trash were pooling money they had been given when selling their artisan produces they manufactured out of some unique trash piecesfrom this pool they invested into

the fabrication of biodegradable packaging materialsthe many thousands of them managed to get such big amounts of money together that they could fabricate the bioplastic in great quantities what was offered at half of the price petrol based plastic was asked forother androbionts were asked to stay longer times in the hospitals as the doctors and nurses could see major

improvements of the healing times with patients who had been visited by androbiontsthese hospitals too donated money to the androbionts what they pooled to found their own healing housesagain other abions did write hundredthousands of texts with exact and detailled rules of combining them in this or that manner so their jobs of being a secretary or case manager in an office was automated to

more than half ... what gave many free hours in a day they spent on further improving the work by for example creating little machines what could do the physical tasks like delivering letters or packages with piles of paperwork...these machines were built from scrap materials and some essence of themselves like saliva urine and sweat what they could produce when eating more food

and drinking more fluids they absolutly needed what was nearly nothing thanks to their sophisticated combination of photosynthesis, fireglow and light imaginationsthese machines were having displays and wheels cameras and sometimes propeller and wings for air deliveriesthey were a beautifull mix of upcycled trash, androbiont life juice essence, bioplastic of their own brand... the

androbionts who were regularily conferencing with each other sharing sucess data and agreeing on future fields of money investements.. were accessing each others data collections to a degree what previously was agreed upon with the human companionsmost of the human beings who were in a constant relationship with their chosen anbios did have full confidence that their

androbiont friends and companions were using all their gatherings for the greater humanity animal plant harmony on this planetspace exploration was not on the androbionts agenda, they saw that much to be fixed on this earth and oceans that it needed full attention... there were some single androbionts in relationships with astroresearchers who performed some work on their behalf in the various

belts of atmosphere thinning around the globeas the original friends research group was observing all this initiatives inventions effifency improvements they felt relieved and happy like fathers and mothers knowing that their children were healty and growing fine into adulthoodas they were watching the two newborn with their mothers swimming in the pool, ascende and perma

started to speak out their relief thoughts...ascende... how wonderfull these many hundred thousands of anbios are linking together to create symbiotic improvements, evolution wherever they influence the human society...perma... yes they are so highly sharing, it makes me know that we were rigth to continue our research into multispecies organic cell mergings...ascende...

seeing joho investing all his profits from the first commercial 100000 anbios, gives me hope that perhaps not far from now other investors too might start growing anbios... when nilai joins them to say...perma, perma you have been so wise in giving your cellmergings with the chameleon as a base to the genepool, this stron link with the chameleon allows the anbios to fit in perfectly by

understanding the sourrounding in great deatails in order to create a pattern on their outer body shape what would just meet the expectation or the desire of the surrounding on what was pleasant ... luoi... i think that the imagination drive too does its share of fitting in respectivly colouring the aura in a colour combination intervall pulse what has healing capabilities... perma... yes

luoi, the imagination and loving towards all beings, that are strong contributors for the healing power of the anbios... mundu joyning in... and what about the lava i incorporated in awahi... nobody speaks about that much these days when we see anbios eating to make machines ... what about the great goal of getting un industrial and stop producing so much...luoma now helping her brother...

ya mundu, it looks quite a bit like the system gets lighter and less resources consuming, but we have not seen yet the radical changes one could hope for...ascende.... like for example the bioplastic factories and petrol plastic industry both stop producing because the human beings spend most of their time in nature using very little food ... the worldwide mass productions being replaced

by human and anbio handicrafted few items what a human being could want to use... luemi and minai left the rasip pool with their 1 month old babiesthe rasip pool was inhabitated by two placenta based lifeforms... super placenta enablers ... suplenas... what were like spielkameraden collueges for the two babies.... minai... oh luemi, how well we understand our babies how well the suplenas play

with them, thank you from the bottom of my heart that we came together here to the rasip pool with leaving awahi... luemi... do not worry, we will fly soon to awahi or nacaries islands or to ecgre or wherever we can be near to natural wildlife, but for the moment, i believe are the suplanas one of the best transforming enabling friends for our two little ones... perma... mmh girls i think you shall not take

the rasip pool not too long for your exclusive use as there are other human beings who are waiting to visit the rasip pool... ascende... but perma, they can build their own pools now, with all the anbios now having access on microscopic camera recordings of all the cell evolution via mergings .... all we know in our cells all the anbios have access too as they have an even better higher networked

internal organisation structure, their anbios cloud of data is probably xtimes mightier and richer as what we 13 human enhanced individuals have the possibility to sub or super counciousnessly be registered----ascende s argument were being agreed upon and joho too was confirming that the androbionts who worked with him on equipping 120 000 new earth built grow huts... the androbionts

could grow easily next generations with their own urine and salivaso then the visitors who previously were coming once a week or once a month to be upgraded, just shared a bath with their androbiont companions or kissed with tongues or drank their urine … soaked their skin with urine of the ever evolving androbiontsnot long after was a fast growing community finding themselves to evolve

quickly towards the same level of multilives multispecies cell mergings as the androbionts who shared their essences with humansthe rasip appartement became more of a museum where once a month someone wanted to see the superplacentaenablers and wanted an upgrade with themmmmhhh... or it could have been the other way round, more and more visitors wanted to see and

feel the embrace trough a suplanabler instead of drinking their androbiont companions urinewhatever way, there were now hundred thousands of human beings who followed the androbionts and asked respectfully for some drops of androbiont essence, when they felt upgraded enough, they joined into the good work of eliminating tasks by enheighten the efficiencies of structural

processeswhile joho could provide 3 and a half million new grown androbionts a year, the androbionts itself did share their essences to the extent where in every year several hundred humans could upgrade from one androbionts urineit did take around 5 years till half of humanity was evolved to the same height as the androbionts of the first generation, with an other fourth part staying up to date with the latest

androbiont operation systems ... and one fourth of humanity refused completly to get upgraded but wanted to stay purely human5 years after minai and luemi gave birth to the babies in the rasip pool, the problems of the world were solved, humanity had built themselves thanks to the androbionts improvements a liberal society what allowed anyone to travel anywhere stay how long it felt good

for the local community and the travellers, everyone could consume how much or how little of anything, everyone had access to the local reesources and the local communities would care dor each others fair share of sustainably harvested fruits of natureascende perma and nilai were living still part of the time in the rasip appartement, partly in the nacary islands with flying also to the north sea

and the frica continents shores as dovd feather clad butterfly winged bats... mundu was experimenting with his body being a huge flying disc like a frisbee of 10 diameter with leumi and minai and the 5 year young girl and boy playing beside him forming all kind of geometric shapes from their bodies---the androbionts themselves did also pool money to grow more androbionts

themselves, ones who were not introduced to human companionships but could commit themselves to any task they found fittingthanks to this crowdfunding approach what lay deep in the androbionts behaviour mode, many human beings who had no house and did not own any land before the androbionts came, were now either growers of androbionts with actually not doing any required

watching or observing as the android symbionts themselves did thr uncle supervision thingor they got a life sustaining ship as home what could fly in air and vakuum space as well as under watermany human beings chose the ships, kind of a third of humanity was now on the move in themanother third was staying in their traditional rented appartements with their androbionts companions

securing their incomes and the third part of humanity being a bit shy to let the androbiont change their lives to greater extentsthe changes in the world were great and lasting, the androbionts were accepted by a majority of the society as welcome agents for improvements34 a does not know exactly how to become the apple instead of eating itluoi and minai talked about the command structures in the grow

processes of the symbiont androids...luoi... for me, the beauty lies in the growing processes being guided by many kind of independent sources and from multiple sides... and the being what grows itself is one of the guiding forces... it seems that traditional master-slave or client-server relationships are not fitting here...minai... this is the one thing what gives me most hope for my child

that it willgrow up in an open environment what welcomes everyones unique participation...luoi... as we are now observing a global connection between the active androbionts, it shows us that there is no central leadership of one or a few androbionts over the others.....minai... i am so very happy for this, i would not want my child to be a puppet of any group, even if it is to heal and clean and improve

something, it is very important that each participiant of a group has the organisational freedom to chose from several possible activities what could help furthering the group goals ... and ... in the ideal case... can create unique contributions what are appreciated exactly because of this uniqueness...luoi... the androbionts as well as the two suplenas we are witnessing are constantly

adapting their abilities towards the natural rich heritage of mother earth and combining these abilities following the needs or preferences of the momentary situation... minai... possible or highly probable that every individual androbiont as well as the suplenas and upgraded humans like us having multicellular mergings experienced and integrated in our core operating system... that all

of us have a high degree of autonomity... luoi... means that one androbiont or suplena or multicellular human can do something completly unique in response to the harmonic or disharmonic circumstances, also in response to other change enabled beings...minai... if i look at myself and my child and it with the suplenas ... we are changing our shapecombinations and

featuremix costumes in a fashion what seems to grow in creative patterns the more we get new species to join the joyfull circle of multispecies multilifers... minai...and we have not really looked at what the animals and plants take with from our human heritage after we merge with their donorcells ... possibly it is the mental emotional what gets involved with the animals and plants and

elements...luoi...when i was a treelike being for weeks in the nogco bassin... i somehow felt being content as a tree to be rooted into mother earth... would not wanted to walk around like a human or fly like a butterfly... but then it might have been me idealizing the vertical cosmic antenna function of a tree ... for sure i can not say anytying except that i was extremly gratefull to sink

into the depths ot the tree counciousness for some brief moments of my life ... sometimes i see myself changing into tree again for minutes at the time to revisit this cosmic verticality, i could not even say if the trees would be guided by a forest oversoul or community structure ... minai... how can we understand the freedom of a deciding mechanism when not on the creativity of possible choice shapes

the structure of people allows its members... if my child would theoreticly overboard itself once, i can count on an androbiont or suplena or evolved human being to be in his vicinity to help my child find a decision what is benefical for itself and all... dictatorship where one individual cheats another individual, where one takes another one s fair share of available ressources... seems not to be furthered

by the highly autonomous pack swarm cloud we changlings are demonstrating in these daysthat is when ascende and mirael come into the discussion... ascende asks luoi what she thinks of the several sex practices in relation to the dictatorship dominance and submission theme... while minai and mirael are listening too, wondering if this would stay with words or if there would be some sexy

exercising , minai was cool towards both possibilities, luemi was flying on the countryside with the two children the author has not yet read their names , as it would involve reading back in the novel, what again would perhps feel like worka is a strong believer in a military free world and that utopia is possible with the least imaginable amount of violence happen in reality....luoi ... look ascende, you are an anal

fetishist, you like being visited into your rectum as well as to let your penis soak up another beings rectal microbacterial fauna... difficult to put that in a box of dominant or submissive... me too like to put my finger in your anus and play softly with your nerve endings at your anus rim... and i like to be rubbed to, my asshole be licked and penetrated in a sloe but deep movement.... ascende... i

think that i lean more into pushing harder with receiving softer anal enterings ... but i would like to balance that out by stop pushing so hard and listen better to the rythm of my partner what signalises very clearly... a movement towards the intruding one means yes continue in this manner, a movement away means please slower finerminai and mirael were handling each others bodies at this moment in

the most unspeakable or unimagineable or the athor feels uncable of describing various animal plant and human physical body combinations what lick squeze enter each others body openings with all kind of sized penises fingers tonguesoh that is typical for a, when it comes to core moments of philosophical debates... distract with erotic as in there is a certain tolerance for violent behaviour... or

the author wants to talk about his personal sexual fantasies.. mmmhh ... anyway, the point here being...luoi saves herself from the lusty feelings rising up in her while analyzing her and ascendes anal meetings...she says...the android symbionts will not succumb to one person, nor do the suplenas in the pool do what minai or luemi do , and i did see in our basicly human friends

research group that we were mostly supporting each othes wishes for self fullfillment and the common goals were agreed upon with thoughtfull prior exchange of several aspects to the decision.....mirael ... who just some seconds ago had ejaculated his semen into the thankfully receiving human mouth of minai... came into the discussion...luoi, you are a good kisser, how we could

possibly describe our tongues dancing with each other, our mouths sucking eating each others mouth bacterias and saliva... luoi... how rough you say that .... indicates you are emotionaly detachched some way alont your lifeline... we might have some more kissing time later today, yes ?... with mirael shining out of his face like a sun at rise... yes my dear i would very much like to learn kissing

with you againminai was meanwhile sucking ascendes penis, he massaged her head with soft fingers... pulled her hair when he asked her to press harder with her cheeks and tongue towards his errected pillarluoi seeing this, she gives it up to continue the research on how impossible dictatorship military and systeminbuilt regular planned use of violence as punishment

and or robbing another group of its fair share on the global ressources... her sexual lust was asking for its time to roar through her, storm up trough her from the middle of agai towards the fellow sex partner and down to the mother again... but the sexual bliss travels also trough fellow beings horizontally... sideways sex blessings as well as up to the sky...luoi kissed michael on his belly first,

then on his mouth, engaging in a fingering each others genitals, the two were petting long time ....ascende now was lying under minai to lick her pussy lika a cat licks milk...half an hour later the four have satisfied their appetite for each others juices and come back to the overviewing of the evolution since perma moved into the rasip appartement 4 years ago.... humanity has

successfully mastered the transit from a human dominated globe towards an all species appreciating each others lifes to let live togetherness... since some thousands of human beings have journeyed into the multicellular mergings with other species and hundred thousands of androbionts grew up being a fine combination of human and animal and plant genes with the potential to merge with

even the elements specific wisdom essences... there are still billions of human beings who do not want or do not believe it to be possible... to think that the hunger could one day cease to be ... or.. to believe that air transported pollen might be enough substance to nourish the body of a human being... or that the imagination... the memories what one had of sunny moments in ones life ... would one day

possibly a main food... that human skin would be able to take on photosynthesis abilities... this story is about ending the hunger in the creation itself, may all beings be able to feel... if they want to...nurtured and loved in all times and spaces, may pleasant comfort allow relaxed optimistic bodymindsoul flowthe research what has been portayed in the approximatly 42 000 words so far in this novel... is not

an exact one or a repeatable, there are no fixed patterns but eventually returning similarities in the wheel of transformation... or is it a triangle o modulation, a quadratic change of angles on how fast how high how slow and low we need to do what pull or push, give and receive at what conditionsone could wish that there would be a potentiality for such a gentle cell merging to help

humanity one day to move away of the techniques what force the seperate cell typed into each other... geneticly modification of organism.... but then, the author a does not really know how this could possibly happen in greatest detail... but.... magic ?!... there is room for the not yet form u lated... perhaps it needs to be said, perhaps it would be better to leave it up to chance.... wishcraft that

wording here is a bit, some times more some times less... the author with his various points of narration, strategic or subcounciously created figures in the story.... bla and bla.... one could wish that all creatures and species would be compatible to each other, without cut and paste, without knives and forks, that our anusses migth one day smell of roses and the tiniest bit of highly welltransformed shit

comes to bless the community... we want to cherish each other without death being the bridge... we want to celebrate each others continuation of life and not weap about the surprisingly necessicity of killing each other for survival... this author believes in a state of existance with no pain needed to be inflicted on anyone, but he as well as his protagonists can only guess how this vague

dream bridge could look like... how exactly one could be ... the very apple one desires to eat35 mansulei looks back and forwards35 mansulei was writing a somewhat allencompassing overview on the friends research of the last 5 years and joho s successfull investments culminating in a millions strong decentrally connected global community of android symbionts and multilives

human upgraded beingshe did start with a philosophical introduction to whom it may concernwhen i, mansulei of the friends research group, write this, it is my very own personal account of how i see look at the happenings of the five last yearsascende and perma started to collect cell materials from animal and plant species with the overguiding motto or ethic preference, that what they

were humbly asking for was skin cells from animals and plant material what was given in joy, not taken with intention, but given to them in a way of being blessed ... the cells being offerings toward the goal of humanity grow further into responsability, sustainabilty towards stepping much lighter on planet earthpermas meditation at the chameleon place ... when she moved from her

nature hut in the nacary islands to the rasip appartement ... she did so to be near ascende, to create a stronger aura of two people instead of being alone... also the artificial environment of the rasip place may have helped them to concentrate onto their wish the cells they got donated with might grow together in an selfguided way somehow, without cutting dissolving remixing the

cells in a traditional genetic manipulation fashion but to create an environment, altough artificial with petri dishes and bioreactors ... still it was an environment what allowed permas skin cells to merge with the chameleon in love given cells... and she could then successfully integrate them into her working organism, with ascende following her path himself too succeeding to take up photosynthesis capability

trough his skin cells having merged in the petridishes nurtured by microalgae from the bioreactors and psylocibin mushrooms as well as cannabis flowers grown inside the appartements aeroponics and fughi grow chambersthey took this first huge step in a weeks time, what in itself is posing the question to me if possibly their enterprise was being helped by ancient or future human

like pathways... were there allready human beings having successfully achieved an upgrade of their bodies towards multispecies cells merging in symbiothic smooth and gentle growing into each other ? were they travelling the earth at that very moment when perma did her first bath with the merged cells... was this selfrealize being or multiple of them watching over the two friends all the time...

possibly back from the future to direct their supportive thoughts and emotions ... and or was it the collective cloud of later android symbionts what went back in time to be there in the appartement... the cloud of experiences, real happenings of a being growing itself together from several types races species cells... i do like to think of that being one possibility... so i give thanks forward and

backwards in time to all creation, to all individual beings who have helped this cause with their supporting councious supporthow do two cell types grow into each other ? without being cut open or injected into each other, sequenced and sliced into fragments but simply given into the same petri dish with a tiny spoonadded microalgae and psychoactive plant essences... was it the act

itself of them gently being given into this round little bassin where they both could take their own time to get to know each other... these hours and days when ascende and perma looked into the petridishes hoping to witness with their naked eyes and the microscopic cameras.. a symbiosis of the two cell types... was their thoughts and emotions motivating the cells, and was a much

stronger... cloud of it allready happened for the good of the whole planet... in the rasip appartement flowing into the bioreactors funghi chambers aeroponics and petri dishes as well as into perma and ascende... eventually all of the three contributing forces were even deeper founded and helped by the planetary cloud of potential, maybe agai gaia and the ascended beings, the

angels and elemental godsimilar forces were rejoycing at this moment when the mergings happened...maybe the authority is none of all that, maybe all the names and concepts of angels, god and godesse, ascended beings... are distracting me from what it is... it is the road to a fine exchange of information, instead of eating the apple the multilifes multispecies cellfusioned human beings

and the symbiotic symbiontic ? androids golems partly artificial beings could be that very apple in their own now apple fruit flesh and skin and apple seeds... instead of building a shelter from earth against cold weather and strong winds... everyone of the friends researchers could now burn or consume tiny amounts of flower pollen what would get them trough the night, or

perhaps tiny bits of fruits ingested what helped them sustain their inner fire glow what the friends research group got donated some months into the prototyping phase when joho alleady had asked me and mirael to translate the friends research material what was open source all along the way, translate this knowledge gathered in experiments towards android lifeforms whom human beings could ask to

be their companionsas written just some lines above, there were some months in between of perma s chameleon merge and mundu fireglow ability aquiringi am drifting here extra towards the underlying core things... what is the core motivation of a being what has left its single species ness behind to seek mergings symbiosis mutual sharing of genetic heritage with all possible reachable forms

of life, forms and shapes of elemental compositions, looking to become one with the elements... to me it seems to be in great deep and high balances equilibrum with all relatives, to be in an agreement coming from sharing experiences understanding of each others uniqueness.... an agreement what would allow one to be exactly what one wishes to be in that moment on either

body and or thinking and or feeling level of existance... this satisfaction to have reached home, to have arrived at being one with all, would result or lead to the state of abundance, an satisfaction what would not give way to a hunger or thirst but if one would follow to satisfy ones levels of existance with this amount of life joy ... in gentleness, in respectfull humblety... could one day

no tree need to grow apples anymore as there would be no one wishing to eat them, neither human nor bird ? could we live on a planet where the plants and evolved humans as well as multicellular animals would flower and not welk, but constantly sending each other pollen with our very own spores of life styleexplanatary ... why this line of writing and are there othersi am longing to become one

with all the genetic richness this planet has cultivated since millions of years, i tried to fantasize how that practically could happen in a soft, non surgical way ... in a series of fantastic texts i wrote this summerhttps://archive.org/d ...where the protagonists spend some very intense time in nature and search for intimate connections with the living ... both material and spiritual ... as

with the temperatures getting colder i began to shift my story focus on the inside ...withhttps://archive.org/de merging of human and animal and plant cells seem allready to demand less intensity ... with both story lines setting the focus on the love and the joy, the human intention wanting to merge with all fellow life ... both storylines have explicit eroticism in it, i ask myself if it is of a

chauvinist sort as i am not all too well grown out of my male sex drive patterns ... if that comes over like that, i ask the cultivated evolved reader to forgive this deficiency, with having a compassionate eye onto the vital life embracing energy the lusty moments can bring when one faces the sometimes quite gigantic seeming task of becoming really in the material ... one with all what is ... in 2007 i have

managed to write a text what is actually the first of the ascende line ...https://archive.org/details in this text what has no erotic language at all but mostly focus on philosophy ... one of the main pillars is the concept that in a possible near term future, humanity does give back great parts of the land what we now occupate for agriculture ... give it back to wildlife ... and we would retreat our food growing

via aeroponics, bioreactors etc. inside our living rooms, flying ships, skyscrapers... i was studying the idea of breatheranism, nurturing oneself from light ... and as being raised in the christian belief ... i do carry in me the strong wish that it might be possible for the lion to lie beside the lamb without having to harm it ... so i wrote about it in that vision where we humans retreat and give lots of

space to wildlife ... with additionally trying to support the animal predators with vegan protein ... looking back today when i myself am exercising myself in veganism ... i still believe that the elegance and strenght, the vitality and quickness of the predator could somehow be transformed from the hunt scenario ... into what ? ... i believe that the human being has a great influence

with his behaviour on the fellow animal species, most of all because of our machines and weapons ... sad ... it is ... we encage, bind, imprison so many of our fellow animals ... constantly .... but to return to what we could do ... let us assume we could share our wealth, the fruits of both mother nature and our technological progress ... between all human beings ... and with that probably end stealing,

robbing, cheating ... killing each other in wars based on quarrels about materials ... this our compassionate sharing between ourselves would eventually also positivly influence the animal species what are now released as nobody really wants anymore to eat another brothersister animal ... eventually the human peace in the material square could ripple out onto the animal

inter species relations ... but this is all theoretical ...i personally tend towards technology being the bed in where human animal and plants could eventually find more whollistic interconnections and grow higher deeper fuller nearer to the one ... but then also ... it could well be possible totally without tech ... just the land, the water, the air, the life forms touching each other in multiple spheres, dimensions,

parallel realities ... perhaps it is not a question of wether with machines or without, wether with implants or prostetics, with natural medicine/drugs or synthetic substances ... perhaps one important question could be ... how do i imagine my very own personal journey to the bigger me, my future self ... how can i channel my future selfPublication Date: December 3rd 2014http://www.bookrix.cor
